## CURRICULUM AND DETAILEDSYLLABI

FOR

B.E DEGREE (Civil Engineering) PROGRAMME

SECOND TO EIGHT SEMESTER

For the Students admitted from the academic year 2018-2019

# THIAGARAJAR COLLEGE OF ENGINEERING

(A Government Aided ISO 9001-2008 certified Autonomous Institution affiliated to Anna University)

MADURAI - 625 015

Approved in 59<sup>th</sup> Academic Council Meeting held on 07.12.2019

# THIAGARAJAR COLLEGE OF ENGINEERING, MADURAI – 625 015 DEPARTMENT OF CIVIL ENGINEERING

### I) Vision

To establish process of learning to meet the global standards for sustainable built environment

### II) Mission

We are committed to:

- Provide quality education through innovation in teaching and learning practices meeting the global standards
- Encourage faculty and students to carry out socially relevant and forward looking research
- Offer consultancy services using state of the art facilities fulfilling the needs of the industry and society
- Enable our students, faculty and staff to play leadership roles for the betterment of the society in a sustainablemanner
- III) Programme Educational Objectives (PEOs) for B.E Civil Engineering programme:
- **PEO1**. Graduates of the programme will contribute to the development of sustainable Infrastructure for the betterment of society
- **PEO2**. Graduates of the programme, as an employee of an organization or as an employer, will continuously update their domain knowledge for continuous professional development with focus on research & development and industry interaction
- **PEO3** Graduates of the programme will accept and create innovations in providing solution for sustainable built environment
- **PEO4** Graduates of the programme will discharge their duties as professional Civil Engineers with quality and ethics

| PEOs/   | M1 | M2   | M3 | M4 |
|---------|----|------|----|----|
| Mission |    | 1112 |    |    |
| PEO 1   | -  | -    | М  | S  |
| PEO 2   | S  | S    | S  | -  |
| PEO 3   | М  | М    | М  | S  |
| PEO 4   | М  | -    | М  | М  |

### **Consistency of PEOs with Mission of the Department**

### IV) Programme Specific Outcomes (PSO) for B.E Civil Engineering programme

Graduating Students of B.E. Civil Engineering programme will be able to:

- **PSO 1**: Investigate, Analyze, Plan and Design the problems in multi various domains of civil engineering
- **PSO 2**: Work with ethical principles and sound managerial skills in the promotion of civil engineering infrastructure keeping in mind, health, safety and sustainability of the society

### Programme Outcomes (POs) of B.E. (Civil Engineering)

Graduating Students of B.E. Civil Engineering programme will:

- 1. Engineering Knowledge: Apply knowledge of mathematics, science, engineering fundamentalsandanengineeringspecializationtothesolutionofcomplexengineering problems.
- 2. Problem Analysis: Identify, formulate, research literature and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
- Design/DevelopmentofSolutions:Designsolutionsforcomplexengineeringproblems and design system components or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal and environmental considerations.
- 4. Conduct investigations of complex problems using research-based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of information to provide valid conclusions.
- 5. Modern Tool Usage: Create, select and apply appropriate techniques, resources and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- 6. The Engineer and Society: Apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to professional engineering ractice.
- 7. Environment and Sustainability: Understand the impact of professional engineering solutions in societal and environmental contexts and demonstrate knowledge of and need for sustainable development.
- 8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice.
- 9. Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams and in multi-disciplinary settings.

- 10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations and give and receive clear instructions.
- 11. Project Management and Finance: Demonstrate knowledge and understanding of engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 12. Life-long Learning: Recognize the need for and have the preparation and ability to Engage in independent and life- long learning in the broadest context of technological Change.

| PEO<br>/PO | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|

\*Continuous Assessment evaluation pattern will differ from subject to subject and for different tests. This will have to be declared in advance tostudents.

\*\* Terminal Examination will be conducted for maximum marks of 100 and subsequently be reduced to 50 marks for the award of terminal examination marks.

# Preamble

Engineering, in general, but particularly Solid Mechanics, Aerodynamics, Fluid Flow, Heat Flow and Robotics have application that requires an understanding of Vector Calculus and Differential Equations. Also Mathematical tool Laplace Transforms is very much essential to solve ordinary and partial differential equations that occurs in the above areas. Eigen values and Eigenvectors are extremely important while creating engineering models in control systems, designing bridges, communication systems and searching algorithms. The course is designed to impart the knowledge and understanding of the above concepts to all Engineers and apply them in their areas of specialization.

### Prerequisite

18MA110 Engineering Calculus

## **Course Outcomes**

On the successful completion of the course, students will be able to

| CO      | Course Outcome Statement                             |  | Weightage |  |  |  |  |  |

### Sample Questions for Course Outcome Assessment\*\*

#### Course Outcome (CO 1):

- **1.** Show that Laplace transforms of  $\frac{1}{\sqrt{t}}$  is  $\frac{\sqrt{\pi}}{s}$ .
- **2.** Identify the inverse Laplace transform of  $\log\left(\frac{s^2+1}{(s-1)^2}\right)$ .

**3.** Discuss any three properties of Laplace transforms. **Course Outcome (CO 2):** 

- **1.** Apply Laplace transform solve  $y''+9y = \delta\left(t-\frac{\pi}{2}\right)$ , y(0) = 2, y'(0) = 0.
- **2.** By using Laplace transform, solve  $x''(t) + 3x'(t) + 2x(t) = 2(t^2 + t + 1)$ ; with x(0) = 2, x'(0) = 0.
- 3. Apply convolution theorem, solve the Voltera integral equation of the second kind  $y(t) \int_{0}^{t} y(\tau) \sin(t-\tau) d\tau = t$ .

## Course Outcome (CO 3):

**1.** An elastic membrane in the  $x_1 x_2$  plane with boundary circle  $x_1^2 + x_2^2 = 1$  is stretched so that a point P;  $(x_1, x_2)$  goes over into the point Q;  $(y_1, y_2)$  given by  $y_1 = 5x_1 + 3x_2$ 

$$y_2 = 3x_1 + 5x_2$$

Find the principal directions that is the directions of the position vector X of P for which the direction of the position vector Y of Q is the same or exactly opposite.

Predict the boundary circle take under this deformation?

**2.** Discover the type of conic section the following quadratic form represents and transform it to principal axes:  $Q = 17x_1^2 - 30x_1x_2 + 17x_2^2 = 128$ .

**3.** Diagonalize the matrix  $\begin{bmatrix} 6 & 0 & 0 \\ 12 & 2 & 0 \\ 21 & -6 & 9 \end{bmatrix}$ 

# Course Outcome (CO4):

- **1.** Reduce to first order and solve y''-y'=0
- **2.** Compute the general solution for  $y''+y'+(\pi^2+1/4)y = e^{-x/2} \sin \pi x$
- **3.** Solve  $(x^2D^2 4xD 6)y = c$

# Course Outcome (CO5):

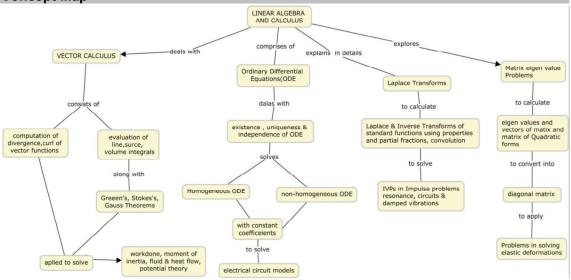

- **1.** Predict the value of  $div(curl\vec{F})$
- 2. If  $\phi_1$  and  $\phi_2$  are scalar point functions and  $\vec{F}$  is a vector point function such that  $\phi_1 \vec{F} = \nabla \phi_2$  then identify  $\vec{F}.curl \vec{F}$ .

3. Estimate  $curl \vec{v}$ , where  $\vec{v} = \left[e^{-z^2}, e^{-x^2}, e^{-y^2}\right]$ . Course Outcome (CO6):

- 1. Predict the work done by the force  $\vec{F} = [y^2, -x^2]$  acting on a particle in  $y = 4x^2$  from (0,0) to (1,4).
- **2.** Compute the amount of fluid that crosses the surface in a flow per unit time at any one instant, if the velocity field is  $\vec{v} = y\vec{\iota} + x\vec{j} + z\vec{k}$  over the boundary of the region enclosed by the paraboloid  $z = 1 x^2 y^2$  and the plane z = 0.

**3.** Apply Stokes theorem to compute  $\int_{C} \vec{F} \cdot \vec{r'} ds_{\text{ where }} \vec{F} = [y, xz^3, -zy^3]_{\text{ and }} C$  is circle  $x^2 + y^2 = 4, z = -3$ 

# **Syllabus**

# LAPLACE TRANSFROMS

Laplace transform, Linearity, First Shifting theorem – Transforms of derivatives and integrals, ODEs - Unit step function, Second shifting theorem - Short Impulses, Dirac's delta function, partial fractions - Convolution, Integral Equations - Differentiation and integration of transforms.

# MATRIX EIGEN VALUE PROBLEM

(9 hours) The Matrix Eigen value Problem, Determining Eigenvalues and Eigenvectors - Some Applications of Eigen value Problems – Symmetric, Skew symmetric and orthogonal matrices - Eigen bases, Diagonalization, Quadratic forms.

# **ORDINARY DIFFERENTIAL EQUATION**

Homogeneous Linear ODEs of second order - Homogeneous Linear ODEs with constant coefficients – Euler Cauchy Equation – Existence and uniqueness of solutions, Wronskian -Nonhomogeneous ODE – Modelling: Electric Circuits- Solution by Variation of Parameters.

# VECTOR CALCULUS

Divergence of a Vector Field- Curl of a Vector Field- Line Integrals- Path independence of line integrals- Green's Theorem in the plane- Surface Integrals- Triple Integrals, Divergence Theorem of Gauss- Applications of the Divergence Theorem- Stoke's Theorem.

## Preamble

Surveying is the process of determining by measurement, the relative positions of points on or near the earth surface. The data collected from survey is used in the preparation of plans, maps, profiles, charts and diagrams. In addition survey may be used for the delineation of property boundaries, computation of areas and volumes also to set out the proposed work on the ground.

### Prerequisite

18MA110, 18PHA20

### Course Outcomes

On the successful completion of the course students will be able to

| CO     | Course Outcome Statement  | Weightage*** |
|--------|---|--------------|
| Number |   | in %         |
| CO1    | Compute the linear measurements using chains, angular measurements using compass and ddemonstrate the importance of plane table surveying in preparation of plans and maps. | 8            |
| CO2    | Find the relative position of points on the ground using leveling principles and compute the areas and volume   | 25           |

### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

### Course Outcome 1(CO1):

- 1. Discuss the various methods of chaining on sloping ground
- 2. Compare Prismatic compass and surveyors compass
- 3. Describe the various components of a plane table. What are their functions?

## Course Outcome 2(CO2):

- The following staff readings were observed with level with the instrument having moved forward after the 3<sup>rd</sup> and 7<sup>th</sup> reading. 0.875, 1.235, 2.310, 1.385, 2.930, 3.125, 4.125, 0.120, 1.875, 2.030, 3.765. The RL of the first point was 150m. Calculate the RL of other points by rise and fall as well as the height of collimation method. If the distance between the first and last point was 1500 m, find its gradient
- 2. The following consecutive readings were taken with a level and 4m leveling staff on continuously sloping ground at a common interval of 30m. 3.575, 2.860, 2.235, 1.605, 0.565, 3.870, 2.935, 1.915, 1.235, 0.860, 3.720, 0.565, 2.585, 1.365, 1.025. The RL of the first point was 100 m. (i) Calculate the RL of the points by (a) rise and fall method and (b) height of collimation method. (ii) Find the gradient between first and last point.

3. A series of offsets were taken from a chain line to a curved boundary at intervals of 5m in the following order: 1.75, 2.50, 4.75, 5.85, 3.95, 4.90, 6.55 and 5.25m. Calculate the area enclosed between the survey line, irregular boundary and the first and last offsets, using the Trapezoidal and Simpson's rule.

## Course Outcome 3 (CO3):

1. The following observation refers to a tacheometric survey. Compute the reduced levels of P, Q and R and the horizontal distances PQ and QR. Assume the tacheometer fitted with anallatic lens.

| Inst | Height  | Staff | Vertical             | Sta   | iff readir | igs   | Remarks                           |
|------|---------|-------|----------------------|-------|------------|-------|-----------------------------------|
| Stn  | of axis | at    | angle                | Botto | Middl      | Тор   |                                   |
|      |         |       |                      | m     | е          |       |                                   |
| Р    | 1.440   | BM    | - 2 <sup>0</sup> 24' | 1.200 | 1.830      | 2.460 | RL of BM =                        |
| Р    | 1.440   | Q     | + 4 <sup>0</sup> 36' | 1.350 | 1.820      | 2.209 | 37.725m.                          |
| Q    | 1.410   | R     | + 6 <sup>0</sup> 12' | 0.720 | 1.880      | 2.040 | Staff being<br>held<br>vertically |

2. Find the elevation of the top of chimney from the following data.

| Inst Stn | Reading on<br>BM | Angle of elevation  | Remarks           |
|----------|------------------|---------------------|-------------------|
| A        | 0.860            | 18º36'              | RL of BM=421.380m |
| В        | 1.220            | 10 <sup>0</sup> 12' | Distance AB = 50m |

Stations A and B and the top of chimney are in the same vertical plane.

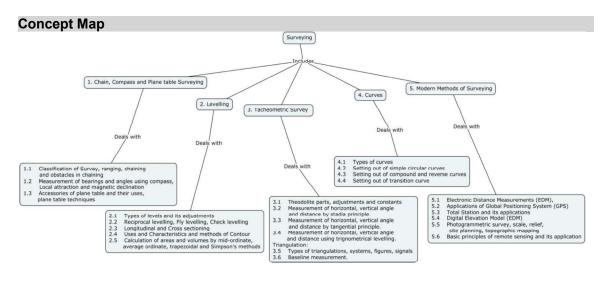

3. Two triangulation stations A and B are 40km apart and have elevations of 178m and 175m respectively. Find the minimum height of signal required at B so that the line of sight may not pass nearer the ground than 3m. The intervening ground may be assumed to have a uniform elevation of 150m.

## Course Outcome 4 (CO4):

- 1. Two tangents intersect at chainage 49 + 50, the deflection angle being 40<sup>0</sup>. Calculate the necessary data for setting out a curve of 15 chain radius to connect the two tangents if it is intended to set out the curve by Rankine's method of tangential angles. Take the length of the chain being 20 m (100 links). Tabulate the actual readings of deflection angles to be set out.
- 2. Calculate the ordinates at 10 m distances for a circular curve having a long chord of 80 m and a versed sine of 4 m.
- 3. Derive the expression for the length and shift of a transition curve required for a first class railway track.

# Course Outcome 5(CO5):

- 1. Explain the principle underlying EDM
- 2. State the significance of Total station in the modern methods of surveying
- 3. Describe with sketches the field work of a survey with phototheodolite.

### Syllabus

**Introduction:** Definition, classification of surveys, **Chain surveying:** Ranging and Chaining, obstacles in chaining. **Compass surveying:** Prismatic compass, Magnetic declination, local attraction. **Plane table surveying:** Accessories, plane table techniques. **Levelling:** Types of levels, temporary adjustments of a level, methods of levelling, fly levelling, longitudinal sectioning and cross sectioning, contouring. **Areas and Volumes:** Calculation of areas and volumes by mid-ordinate, average ordinate, trapezoidal and Simpson's methods. **Tacheometric Survey:** Measurement of horizontal and vertical angle, Stadia, tangential and Trignometrical levelling **Triangulation:** Types of triangulations, systems, figures, signals and baseline measurement. **Curves:** setting out of simple and compound curves. **Modern methods of Surveying:** Electronic Distance Measurement (EDM), Global Positioning System (GPS), Total station and its application. Digital Elevation Model (DEM). Photogrammetric survey. Basic principles of remote sensing and its application.

### Preamble

A structure is made up of constituent elements like beam, column and membrane. The constituent elements should have adequate size to resist applied loads to build a safe structure. Their size is decided by material properties of the elements, particularly their strength. Fields like fracture mechanics, stress concentration, ductility, strength theories, fatigue, experimental stress analysis are few among a vast horde of new fields of study that have emerged from a renewed interest in Strength of Materials in twentieth century.

### Prerequisite

**Basic Concepts of Physics and Mathematics** 

#### Course Outcomes

On the successful completion of the course students will be able to

| CO     | Course Outcome Statement                                       | Weightage*** |
|--------|--|--------------|
| Number |  | in %         |
| CO1    | Solve practical problems through evaluating the laws of        | 17           |
|        | mechanics and also to apply equilibrium concepts               |              |

### Assessment Pattern: Psychomotor

| Psychomotor Skill       | Assignment |  |
|-------------------------|------------|--|
| Perception              | -          |  |
| Set                     | 50         |  |
| Guided Response         | 50         |  |
| Mechanism               | -          |  |
| Complex Overt Responses | -          |  |
| Adaptation              | -          |  |
| Origination             | -          |  |

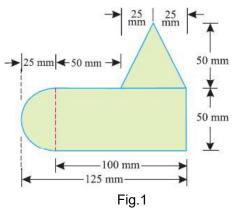

### Sample Questions for Course Outcome Assessment\*\*

### Course Outcome 1(CO1):

- 1. Determine the magnitude and direction of resultant of the following two forces acting on a bolt. One force is of magnitude 10kN making an angle of 60° with the horizontal axis and pointed right side up and another force of magnitude 15kN making an angle 30° with the horizontal axis and pointed right side down.
- 2. Obtain the components of a 5kN force forming angles of 40°, 60° and 110° respectively with x,y and z axes
- Three forces equal to 3P, 5P and 7P act simultaneously along the three sides AB, BC, and CA of an equilateral triangle ABC of side a. Calculate the magnitude, direction and position of the resultant once.

### Course Outcome 2(CO2):

- 1. A unsymmetrical I section is having top flange of size 100mm x 25mm, web of size 20mm x 200mm and bottom flange of size 125mm x 25mm. Compute the moments of inertia about xx and yy axes. Also, determine the radius of gyration.
- 2. A channel section 300 mm × 10 mm is 20 mm thick. Calculate the centre of gravity of the section from the back of the web.
- 3. A uniform lamina shown in Fig.1 consists of a rectangle, a circle and triangle. Determine the centre of gravity of the lamina.

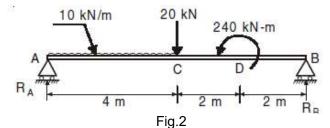

## Course Outcome 3(CO3):

- 1. A circular rod of 100mm diameter and 500mm length is subjected to an axial force of 2000kN. Determine the modulus of rigidity, Bulk modulus and the change in volume if the Poisson's ratio is 0.30 and Young's modulus is 200GPa.
- 2. A bar of 20mm diameter is tested in tension. It is observed that when a load of 40kN is applied, the extension measured over a gauge length of 200mm is 0.15mm and contraction in diameter is 0.004mm. Find the Poisson's ratio and the elastic constants.
- 3. At a certain point in a strained material, the stresses on the two planes at right angles to each other are 40N/mm<sup>2</sup> and 20N/mm<sup>2</sup> both tensile. They are accompanied by a shear stress of magnitude 20N/mm<sup>2</sup>. Determine graphically the location of principal planes and evaluate the principal stresses.

## Course Outcome 4 (CO4):

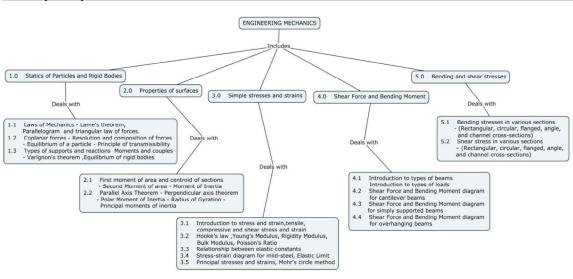

- 1. A simply supported beam of span 6m is subjected to two point loads of 15kN and 20kN at 2m and 4m from left end. Draw the shear force and bending moment diagrams.
- 2. A cantilever beam of span 6m is subjected to a point load of 10kN at free end. Draw the shear force and bending moment diagrams.
- 3. Draw shear force and bending moment diagrams for the simply supported beam shown in Fig.2 and indicating values at salient points.

## Course Outcome 5 (CO5):

- A T-beam having flange dimensions 150mm x 50mm and web dimensions 50mm x 150mm is simply supported over a span of 4m and carries a uniformly distributed load of 2 kN/m over the entire span. Determine the maximum tensile and maximum compressive stress. Also, sketch the bending stress distribution across the cross section
- 2. A timber beam is simply supported at its ends and carries a concentrated load at the mid span. The maximum longitudinal stress is 'f' and the maximum shearing stress is q. Find the ratio of the span to depth of the beam ignoring the self- weight of the beam. If f = 12 MPa and q = 1MPa.
- 3. A simply supported beam of span 5m has a cross section 150mm×250mm. If the permissible bending stress is 10N/mm<sup>2</sup>, calculate (i) Maximum intensity of uniformly distributed load it can carry. (ii) Maximum concentrated load P applied at 2m from left end it can carry.

#### **Concept Map**

#### Syllabus

Statics of Particles and Rigid Bodies; Laws of Mechanics - Lame's theorem, Parallelogram and triangular law of forces - Coplanar forces - Resolution and composition of forces - Equilibrium of a particle - Principle of transmissibility. Types of supports and reactions - Requirements of stable equilibrium - Moments and couples - Varignon's theorem - Equilibrium of rigid bodies. Properties of surfaces: First moment of area and centroid of sections - Second Moment of area - Moment of Inertia - Parallel Axis Theorem -Perpendicular axis theorem - Polar Moment of Inertia - Radius of Gyration - Principal moments of inertia. Simple Stresses and Strains : Introduction, stress, strain, tensile, compressive and shear stress – Hooke's law – Young's modulus, rigidity modulus, Bulk modulus, Poisson's ratio, Volumetric strain, relationship between elastic constants. Principal stresses and strains: Analysis of plane stress and strain, principal stresses and strains -Mohr's circle. Shear Force and Bending Moment: Introduction, types of beams cantilever, simply supported over hanging, fixed and continuous beams. Types of loads concentrated load, uniformly distribute load, uniformly varying load and couples. Shear force and bending moment diagram for statically determinate beams (cantilever, simply supported and over hanging). Bending and shear stresses: bending stresses, shear stresses in various sections.

# Preamble

This theory cum practical course is designed to give an exposure on the theoretical concepts of various materials and techniques in construction. It also gives an overview on planning aspects of residential building components with ventilation as per NBC provisions. This course also aims to apply the theoretical knowledge to practical problems.

## Prerequisite

### Nil

## **Course Outcomes**

On the successful completion of the course, students will be able to:

| CO<br>Number | Course Outcome Statement   | Weightage<br>in % |
|--------------|--|-------------------|
| CO1          | Apply NBC provisions and plan components of residential buildings<br>for the given plot sizes as per NBC along with ventilation aspects  | 20                |
| CO2          | Explain the properties and uses of various building materials,<br>conduct tests on materials such as bricks, steel, cement and select<br>suitable material for an given applications                           | 20                |
| СОЗ          | Explain the components of building in sub – structure and super structure. Also identify, describe and demonstrate the techniques used for their construction  | 35                |
| CO4          | Identify and describe the salient features and uses of various flat<br>and pitched roofs, weathering course, Floor, flooring pointing,<br>plastering, painting including scaffolding, shoring and underpinning | 18                |
| CO5          | Select appropriate tools and equipment for testing of materials such as: bricks, cement and steel rods and construction  | 7                 |

### **Course Level Assessment Questions**

## Course Outcome 1 (CO1)

- 1. Plan suitably a residential building of 300sq.m with kitchen, bedroom, living room and bath & water closet to derive max benefit from natural agencies.
- 2. A hall in a residential building is having dimension of 6m x 5m. Provide suitable openings to cater to the ventilation requirements for the room as per codal provisions.

## Course Outcome 2 (CO2)

- 1. As a civil engineer what parameters you will consider for recommending stone and brick as a building material
- 2. Assume you are a site engineer, identify measures for protecting cement

## Course Outcome 3 (CO3)

- 1. Draw the cross section through a wall in a building. Identify the various components at different level, mentioning its functions
- 2. Identify a suitable type of bond in brick masonry for the following cases mentioning its features:
  - i) Partition wall ii) Load bearing wall for 3 storey building
- 3. Identify a suitable type of stone masonry for the following cases mentioning its features:
  - i) Basement wall ii) Super structure wall

# Course Outcome 4 (CO4)

- 1. Identify a suitable type of floor for the following cases mentioning its features: i) Flooring in Industrial workshop ii) IT building
- 2. Vertical expansion is required in a multi-storey building. Identify suitable supporting system required for construction activities without affecting the free space surrounding the building

3. A wide opening is to be made in a solid load bearing wall. Identify a suitable technology for executing it, without affecting the safety of the structure

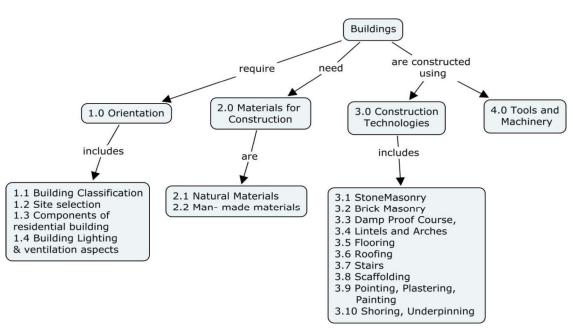

# Course Outcome 5 (CO5)

- Identify suitable equipment to be used for the following situations:

   concreting with minimum voids
   to maintain verticality in masonry
- 2. Match suitable equipment with the given applications:

| Name of tool/equipment | Application  |
|------------------------|--|
| Spirit level           | Mass Concreting                                      |
| Bulldozer              | Proportioning of ingredients in concreting           |
| Needle vibrator        | Maintaining horizontality in walls                   |
| Mason's square         | Maintaining verticality in walls                     |
| Batching plant         | Compacting concrete in beams                         |
|                        | Compacting concrete in slabs                         |
|                        | Levelling of ground                                  |
|                        | Earthwork excavation                                 |
|                        | To maintain perpendicularity between walls at corner |

### **Concept Map**

### Syllabus

**Orientation of Buildings**: Classification of buildings as per NBC. Site selection and its influencing factors, National Building Codal provisions for components of residential buildings: Open spaces, Living room, Bed room, Kitchen, Bathroom and Water closet, National Building Codal provisions for ventilation aspects in buildings. NBC provisions for fire safety in buildings. **Materials for Construction**: Natural materials- stones, aggregates, timber, lime. Man- made materials: bricks, cement, steel, concrete, plastics, flyash, GGBS, Silica fume, PCC and RCC. **Technologies of Construction**: Masonry-Stone and Brick, Damp Proof Course, Lintels and Arches, Flooring, Roofing, Stairs, Scaffolding, Pointing, Plastering, Painting, Special Construction Techniques: Shoring,

Underpinning. **Construction Tools and Machinery**: **Tools:** plumb bob, spirit level, level tube, rammer, spade, shovels, straight edge, mortar pans, sieves, trolley, vibrators, bulldozers, draglines, cableways, belt conveyors. **Machinery**: batching plants, transit mixers and vibratory trucks for ready mixed concrete, pumps, air compressors, hoists and cranes, Choice of construction equipments for different types of works.

| 18CE270 | SURVEY LAB | Category | L | Т | Ρ | Credit |
|---------|------------|----------|---|---|---|--------|
|         |            | PC       | 0 | 0 | 2 | 1      |

The theory part of Surveying can be experimented in Survey lab I. This includes the experiments on chains, compass, plane table, levels, Theodolite and Total station.

# Prerequisite

18MA110, 18PHA20, 18CE220

# **Course Outcomes**

On the successful completion of the course students will be able to

| CO     | Course Outcome Statement  | Weightage*** |
|--------|---|--------------|
| Number |   | in %         |
| CO1    | Use the fundamental survey equipments in the field like chains, compass and plane table.                      | 8            |
| CO2    | Locate the elevation of points and plot LS and CS of the given terrain using levels                           | 25           |
| CO3    | Find the heights and distances of the objects in the field by stadia, tangential and trignometrical levelling | 50           |
| CO4    | Find the heights and distances of the objects in the field using Total station                                | 17           |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

| 18ES290 | LATERAL THINKING | Category | L | Т | Ρ | Credit |
|---------|------------------|----------|---|---|---|--------|
|         |                  | ES       | 0 | 0 | 2 | 1      |

The purpose of thinking is to collect information and to make the best possible use of it. Vertical thinking is concerned with proving or developing concept patterns. Lateral thinking is concerned with restructuring such patterns (insight) and provoking new ones (creativity). Lateral and vertical thinking are complementary. Skill in both is necessary. Although the emphasis in education has always been exclusively on vertical thinking, the need for lateral thinking arises from the limitations of the behaviour of mind as a self-maximizing memory system. Lateral thinking can be learned, practised and used. It is possible to acquire skill in it just as it is possible to acquire skill in mathematics. The course provides formal opportunities to practise lateral thinking and also an explanation of the processes involved.

Engineering Geology is the application of the geologic sciences to engineering practice for the purpose of assuring that the geologic factors affecting the engineering works are recognized and adequately provided for. Engineering geologic studies may be performed during the planning and design. A civil engineer should be able to understand an engineering geologic report, and incorporate adequate measures into the design of engineering works he is concerned with.

| Complex Overt Responses | -            |
| Adaptation              | -            |
| Origination             | -            |

# Course Outcome1(CO1):

- 1. Describe chemical weathering and its impact on civil works.
- 2. Name the gradational forces.
- 3. Outline landslides and its types.

### Course Outcome2(CO2):

- 1. Summarise the relation between convectional current, plate movements and earthquake.
- 2. Name the ratings of earthquake.
- 3. Explain physical properties and behavior of seismic waves within the earth's interior.

# Course Outcome3(CO3):

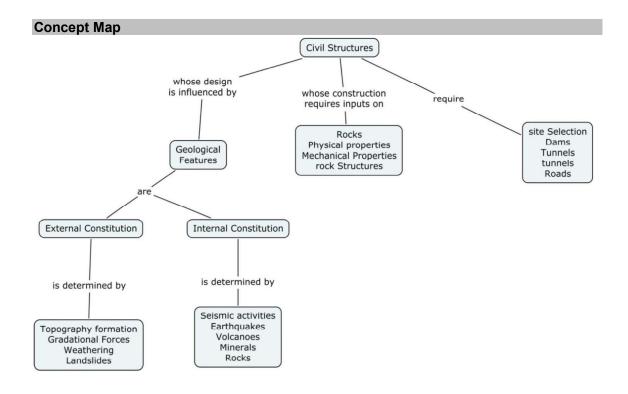

- 1. Outline engineering properties of important igneous rocks.
- 2. Explain engineering properties of important sedimentary rocks.
- 3. Classify physical properties of minerals.

# Course Outcome3(CO4):

- 1. Illustrate how structures of rocks influence in the design of civil projects.
- 2. Apply the geophysical prospecting method for estimating thickness and depth of soil, weathered rock and depth to bed rock.
- 3. Classify faults with neat sketches.

### Course Outcome3(CO5):

- 1. Describe site suitability for construction of dams.
- 2. Explain site suitability for road formation.
- 3. Determine site suitability for tall buildings

### Syllabus

Introduction to Importance of Geology in Civil Engineering; Topographical formation-Structural components of the Continents and Oceans, and its importance with respect to Civil Engineering; Gradational forces - Types, Geological activities over continents and oceans, its impact in Civil Engineering works or design; Weathering- Types, Products, Factorsand Civil Engineering consideration; Landslides - Classification, Causes, and Control; Internal Structure of the Earth - Seismological evidence and Interpretation: Plate Tectonics -Convectional current/forces, Continental Drift Theory, Types of plates, Types of movement, Plate boundary and Earthquakes; Earthquakes – Terminology, Classification, Causes and engineering consideration; Minerals- Physical properties; Rocks -Types and Origin of rocks, Physical, Mechanical and Engineering properties; Classification of Folds, Faults and Joints, Geological map readings, Geological Cross section and Bore hole log study and its relevance on Civil Engineering; Geological and Geophysical investigation for suitable site selection of Dams - Engineering properties and its suitability of different rocks, Tunnels -Geological profile and considerations, Roads - Topography, Complicated regions, weathering, lithological characters, Structures and Groundwater conditions, Bridges and Tall buildings - Topography, Weathering, Gradational activities, Structural disposition and Groundwater conditions.

This course work imparts knowledge required for understanding the general principles of building planning and services with the help of relevant codes, manuals and guidelines **Prerequisite** 

No prerequisite

# Course Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Apply the general planning considerations for different types of buildings.   | 30                   |
| CO2          | Relate and comprehend the integration of various types of<br>buildings services involved in buildings   | 15                   |
| CO3          | Understand the various types of buildings services involved in buildings  | 15                   |
| CO4          | Adapt the principles of Electrical, water supply, sanitation, Lighting, Firefighting, H V A C Systems and allied Services.                                  | 20                   |
| CO5          | Calculate the Planning and design requirements for<br>Electrical, water supply, sanitation, Lighting, Firefighting , H<br>V A C Systems and allied Services | 20                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

# Assessment Pattern: Cognitive Domain

### Assessment Pattern: Psychomotor

| Psychomotor Skill       | Miniproject /Assignment/Practical Component |
|-------------------------|---|
| Perception              | -   |
| Set                     | -   |
| Guided Response         | 50  |
| Mechanism               | 50  |
| Complex Overt Responses | -   |
| Adaptation              | -   |
| Origination             | -   |

### Sample Questions for Course Outcome Assessment\*\*

### Course Outcome1(CO1):

- 1. Discuss the planning considerations to be made in buildings based on codal provisions on fire safety
- 2. Assume an IT building is to be constructed in a metropolitan area of 20,000 sq.m. The width of road in front is 15 m. Plan the building according to F.S.I and height restrictions. Justify your recommendations.

# Course Outcome2(CO2):

- 1. Discuss the various water conservation measures applied to an Educational Institute with hostel facility.
- 2. Discuss the Strategies and practices you will follow to build your own house as Green Building.

### Course Outcome3(CO3):

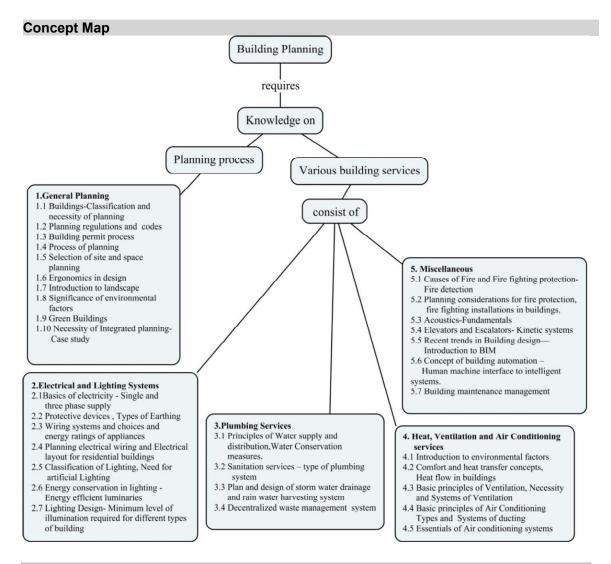

- 1. Specify the minimum levels of illumination for different buildings as per NBC
- 2. Discuss the need of rain water harvesting system in a building.
- 3. Explain about the different systems of plumbing installed in buildings.

### Course Outcome 4 (CO4):

- 1. Plan and draw an electrical layout for a residential building considering the essential electrical points in various rooms
- 2. Based on the water Resources available in your area of living, construct the flowchart for the treatment of water to fit for Drinking purpose.

# Course Outcome 5 (CO5):

- 1. Suggest suitable fire-fighting installations needed for a commercial complex building of 4 floors
- 2. Select a suitable wiring system for a building having a connected load of 500kW. Make suitable assumptions. Justify your selection.

### Syllabus

**General Planning:**–Buildings-Classification and necessity of planning-Planning regulations and relevant codes- Building permit process- Process of planning- Selection of site and space planning - Ergonomics in design- Introduction to landscape- Significance of environmental factors- Green Buildings - Necessity of Integrated planning-Case study. **Electrical and Lighting Systems:**Basics of electricity - Single and three phase supply-Protective devices, Types of Earthing- Wiring systems and choices and energy ratings of appliances- Planning electrical wiring and Electrical layout for residential buildings -Classification of Lighting, Need for artificial Lighting - Energy conservation in lighting -Energy efficient luminaries - Lighting Design- Minimum level of illumination required for different types of building. **Plumbing Services:** Principles of Water supply and distribution, Water Conservation measures-Sanitation services – type of plumbing system - Plan and design of storm water drainage and rain water harvesting system - Decentralized waste management system –wastewater and solid waste **Heating, Ventilation and Air Conditioning services:** Introduction to environmental factors - Comfort and heat transfer concepts, Heat flow in buildings-Basic principles of Ventilation, Necessity and Systems of Ventilation- Basic principles of Air Conditioning – Types and Systems of ducting, Essentials of Air conditioning systems. **Miscellaneous** - Causes of Fire and Fire fighting protection-Fire detection - Planning considerations for fire protection, fire fighting installations in buildings - Acoustics-Fundamentals - Elevators and Escalators- Kinetic systems, Recent trends in Building design—Introduction to BIM, Concept of building automation – Human machine interface & intelligent systems, Building maintenance management

### Learning Resources

- 1. National Building Code of India -2016
- 2. Development Control Rules by Chennai Metropolitan Development Agency 2006
- 3. Energy Conservation Building Code 2007
- 4. CPHEEO Manual on Sewerage and sewage treatment systems 2013
- 5. Manual for environmental clearance for large construction projects by Ministry of environment, forest and climate change.

# **Course Level Assessment Questions**

# Course Outcome 1(CO1)

- 1. Identify the linkages between Environment and Developmental activity.
- 2. How will you link social sustainability to environmental and economic sectors?
- 3. Trace the evolution of the concept of Sustainable Development.

# Course Outcome 2(CO2)

- 1. Give an account of the international milestones in achieving goals of Sustainable Development.
- 2. Discuss about the outcome of any two international summit of Sustainable Development.

# Course Outcome 3(CO3)

- 1. Discuss the possibilities to achieve sustainability in agricultural sector.
- 2. Identify the barriers to achieve sustainability in natural resources management especially in Developing nations.

# Course Outcome 4(CO4)

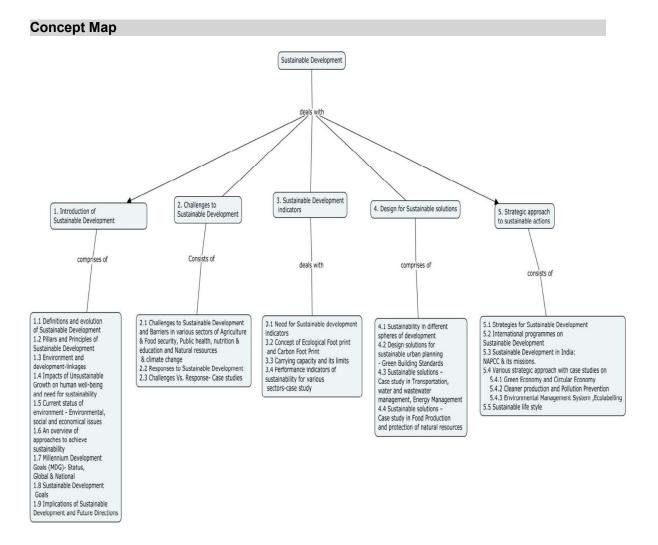

- 1. How Sustainable Development canbe assessed?
- 2. Discuss about the indicators of a countries development.
- 3. Illustrate the history of Commission on Sustainable Development indicators.

# **Course Outcome 5(CO5)**

- 1. Enumerate the business-Industrial sector interaction in Sustainable Development
- 2. Discuss in detail about the sustainable movements happened towards water resources management sector

# Course Outcome 6(CO6)

- 1. Suggest measures to tackle the inflated temperature (predicted) for May 2019.Construct a strategic plan to prevent 1<sup>0</sup>C rise by 2100(this includes plans to reclaim all the effects of climatechange to a state of equilibrium).
- Considering the current world population, Identify its emerging risks in 21<sup>st</sup> century (with respect to population, technology and resources) and suggest few sustainable solutions (general framework) in overcoming them.

### Syllabus

Introduction of Sustainable Development-Definitions, evolution, Pillars and Principles of Sustainable Development-Environment and development linkages-Impacts of Unsustainable Growth on human wellbeing and need for sustainability-Current status of environment -Environmental, Social and Economic issues-An overview of approaches to achieve sustainability-Millennium Development Goals (MDG)-Sustainable Development Goals(SDG)-status of Implementation at National & Global level -Implications and Future Directions-Challenges to Sustainable Development-Challenges and Barriers in various sectors in the context of Climate Change, Responses to Sustainable Development-Challenges Vs. Response- Case studies. Sustainable Development indicators-Need for Sustainable Development indicators, Concept of Ecological Foot print and Carbon Foot Print, Carrying Capacity and its limits, Performance indicators of sustainability for various sectors. Design for sustainable solutions-Sustainability in different spheres of development, Design solutions for sustainable urban planning, Green Building Standards, Sustainable solutions-Case study in Transportation, Water and Wastewater management. Energy Management, Food Production, Resources and Life style. Strategical approach to sustainable actions-strategies for sustainable development, International programmes on Sustainable Development, Sustainable Development in India: NAPCC & its missions, Various strategic approach with case studies on-Green Economy and Circular Economy, Cleaner production and Pollution Prevention-Environmental Management System, Ecolabelling, and Sustainable life style.

| 18CEED0 | ENERGY SCIENCE AND ENGINEERING | Category | L | Т | Ρ | Credit |
|---------|--------------------------------|----------|---|---|---|--------|
|         |                                | ES       | 3 | 0 | 0 | 3      |

Energy resource scarcity becomes one of the biggest issues in the world and leading to rise in cost. Effective utilization of Electrical energy is one of the key issues to minimize the rising cost of energy and to minimize the global warming. The objective of the course is to provide an introduction to energy systems and renewable energy resources, with a scientific examination of the energy field and an emphasis on alternative energy sources and their technology and application. This course will educate the civil engineers on the aspect of energy conservation and management in buildings. The knowledge acquired lays a good foundation for design of various civil engineering systems/ projects dealing with these energy generation paradigms in an efficient manner.

# Prerequisite Nil Course Outcomes On the successful completion of the course students will be able to CO Course Outcome Statement

| CO     | Course Outcome Statement   | Weightage*** |
|--------|--|--------------|
| Number |  | in %         |

| Adaptation              | -          |  |
| Origination             | -          |  |

### Sample Questions for Course Outcome Assessment\*\*

### Course Outcome 1 (CO1):

- 1. Define the term per capita Energy consumption.
- 2. What is meant by Global Warming? What are the various reasons for Global Warming?
- 3. State the objective of Kyoto Protocol.
- 4. Discuss the Impacts of fossil fuel usage on Environmental. Also suggest methods to overcome

factor

# Course Outcome 2 (CO2):

- 1. Define contracted demand and billing demand.
- 2. A textile mill operates with a load of 1800kVA demand at 0.85 power factor lagging. If the power factor is improved from 0.85 to 0.95 lagging by adding additional capacitors, calculate the reduction in demand. The demand charge is Rs.300 per kVA demand per month. Calculate the demand cost saving per year due to the power factor improvement.
- 3. In a sub-station 2Nos. of identical 5000kVA 33kV / 11kV Transformers are operated parallel to meet a domestic load. The iron and full load copper loss of the above Transformer is 9.2 kW and 32.5kW respectively. Initially the two transformers are operated in parallel to meet the load. The load pattern of the domestic load is as follows:

| Load in  | 6000             | 3500        | 3000       | 8000        | 1500         |
|----------|------------------|-------------|------------|-------------|--------------|
| Kw       |                  |             |            |             |              |
| Power    | 0.8 Lagging 0.78 |             | 0.75       | 0.9 Lagging | 0.7 Lagging  |
| factor   |                  | Lagging     | Lagging    |             |              |
| Time in  | 6.00 A.M to      | 9.00 A.M to | 12 Noon to | 6.00 P.M to | 10.00 P.M to |
| 24 Hours | 9.00 A.M         | 12 Noon     | 6.00 P.M   | 10.00 P.M   | 6.00 A.M     |

Suggest the best operating practice for the sub-station to minimize the transformer loss and also quantify the transformer loss minimized due to the best transformer operating practice.

# Course Outcome 3 (CO3).

- 1. Name three types of motors in industrial practice.
- 2. An 89% efficient 30HP Size standard efficiency induction motor was replaced with a 93% efficient 30HP size Premium efficiency induction motor to improve energy efficiency. Calculate the Annual energy saving potential and payback period for the above proposal, using the following data given for the above applications.

|  | - 90 /0                 |
|--|-------------------------|
| Operating Hours per year                                 | - 8000 Hours            |
| Cost per kWh of Energy                                   | - Rs.5                  |
| Cost of Premium efficiency induction motor               | - Rs.60000/-            |
| Scrap value of old standard efficiency induction motor   | - Rs.20000/-            |
| Assume the operating efficiency is as that of designed e | fficiency at 90% load f |
| condition.   |                         |

# Course Outcome 4 (CO4)

- 1. List the types of commonly used lamps.
- 2. Describe the methodology of lightning energy audit in an industrial facility.
- 3. In a factory shop floor lighting 60Nos. of 400Watts High Pressure Mercury Vapour(HPMV) lamps are replaced with 250Watts Metal Halide Lamps to reduce energy consumption. The luminous efficacy of HPMV Lamp and Metal Halide lamp are 60 & 100 Lumens per watt. Calculate the Annual energy saving potential and payback period for the above energy saving proposal, if the lamps are used for 12 Hours daily for 330Days in a year. The cost per fitting of Metal halide lamp is Rs.6000/- and cost per kWh energy is Rs.5/-.
- 4. In a Textile Mill to minimize the lighting power consumption Conventional 9Watts loss Tube light Ballast was replaced with 2Watts loss Electronic Ballast and 40Watts Tube lights are replaced with 36Watts tube lights in 750Nos. of Single Lamp Tube Light Fittings. The cost of Electronic Ballast and 36Watts Tube lights are Rs. 225 and

Rs.45/- per unit. Calculate the Power and Energy Saving Potential, if the mill operates for 8000 Hours in a year. Also calculate the investment required and payback period for the above ENCON Proposal, when the Energy cost is Rs. 4.50 per kWh.

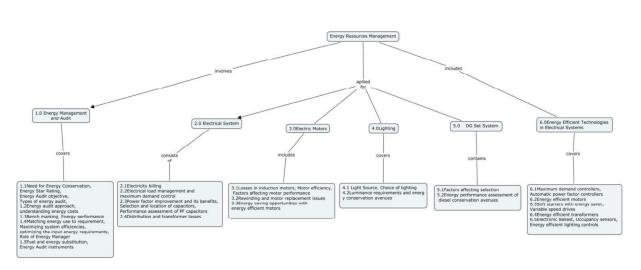

# Course Outcome 5 (CO5)

- 1. Specify the role of Turbo chargers.
- 2. List the energy savings opportunities in an industrial DG Set plant.
- 3. The Specific Fuel Consumption of a 500KVA Diesel Generating Set is 3.2kWh per litre of Diesel at 40% Load Factor. If the Load Factor is improved from 40% to 70%, the Specific Fuel Consumption is 3.8kWh per litre of Diesel. Calculate the fuel saving per day because of the load factor improvement.

# Course Outcome 6 (CO6)

- 1. Specify the advantages of energy efficient motors.
- 2. Explain why centrifugal machines offer the greatest savings, when operating with Variable speed drives.
- 3. A 500KVA 11KV/415V Transformer was proposed to buy for an Industrial application. The conventional Core Transformer Cost Rs. 2,50,000/-, whereas the Energy Efficient Amorphous core Transformer cost Rs.2,90,000/-. The Iron losses of Conventional and Amorphous core Transformers are 2200 Watts and 800Watts respectively. The copper losses for the both the transformers are same. Calculate the payback period for the excess investment paid for the Energy efficient Amorphous core transformer, when compared to conventional core Transformer. The cost of Electrical Energy is Rs.5 per kWh and the Transformer proposed to operate for 8760 Hours in a year.
- 4. A Chemical industry planned to install a Maximum Demand Controller and an Automatic Power Factor Controller to minimize the Demand Cost. The existing Contracted Demand is 4500KVA and actual demand is 4375KVA. The electricity board billing is based on 90% of contracted demand or Actual demand reached, whichever is higher. The demand charge is Rs.400 per KVA per month. The existing power factor is 0.92 lagging. After installing the Maximum Demand Controller and Automatic Power factor controller, the Actual Maximum Demand reached is 3900KVA. The investment incurred in the Demand Saving measure is Rs. 9,00,000/-. Calculate the Demand Cost saving per year and Payback period for the above Encon proposal.

### **Concept Map**

### Syllabus

Introduction to Energy Science –Overview of Energy Systems, Sources, Transformations, efficiency and Storage. Environmental aspects of energy utilization -renewable energy resources and their importance. Energy Sources – Past, present & future of Fossil fuels, Remedies and alternatives for fossil fuels, Biomass, Wind, Solar, wave, tidal. Sustainability and environmental trade-offs of different energy systems. Energy storage. Energy & Environment – Energy Efficiency and conservation, Need of Energy Conservation, Energy Star Rating/Green Labeling, Introduction to clean energy technologies and its importance in sustainable development. Carbon footprint. Carbon credit, introduction to energy economics. linkages between economic and environmental outcomes. Civil Engineering Projects connected with the Energy Sources - Coal mining technologies, Oil exploration offshore platform, Underground and undersea oil pipelines, Solar chimney project, wave energy caissons, coastal installations for tidal power, wind mill tower, hydro power station above ground and underground along with associate dams, design and constraints and testing procedures for reactor containment building of spent nuclear fuel storage and disposal systems. Energy Management - Concept of Green Building and Green Building Architecture, LEED rating alternative ratings like Greha, Zero building energy, Identification of energy related enterprises that represent the breath of the industry and prioritizing these as candidates, Embodied energy analysis and use as a tool for measuring sustainability, Energy audit of facilities and optimization of energy consumption.

# Assignment: Marks will be given for the review I, II & III of case study presentation.

\*\*\* Case study presentation and evaluation

- Each group comprise of maximum three students
- Students will submit the case study report similar to final year project report
- Evaluation of case study presentation is based on the approved rubrics

# Method of Evaluation

| a)l  | a)Internal assessment                     |            |                  |  |  |  |  |  |  |  |
|------|---|------------|------------------|--|--|--|--|--|--|--|
| S.No | Description                               | Max.marks  | Final conversion |  |  |  |  |  |  |  |
| 1    | CAT -II                                   | 50         | 40               |  |  |  |  |  |  |  |
| 2    | Assignment marks (from Review I,II & III) | 3 X 10 =30 | 10               |  |  |  |  |  |  |  |
|      |   | Total      | 50               |  |  |  |  |  |  |  |

### b) End semester examination – Case study presentation

| Performance Index                                | Marks per Individual |
|--|----------------------|
| Originality of the work                          | 20                   |
| Data collected                                   | 20                   |
| Suggestion to overcome for the identified issues | 20                   |
| Final Presentation                               | 40                   |
| Total  | 100                  |

### 1. Model Titles for Case Study:

- 2. 1. Environmental impacts of quarry industries in Melur Taluk.
- 3. 2. A study on impacts of tanneries on ground water and soil quality in Dindigul district.
- 4. 3. Effect of pharmaceutical industry on groundwater quality in poikaraipatty village, Alagar
- 5. Kovil.
- 6. 4. Solid waste and waste water management in TCE hostel.
- 7. 5. Environmental effect of Kudankulam atomic power plant.
- 8. 6. Case study on effect of Sterlite industry.
- 9. 7. Effect on ground water and soil quality by dyeing industries in Tiruppur.
- 10. 8. Effect of textile wastes in Karur District.
- 11. 9. Segregation of waste and its recycling by Madurai Municipality at Vellakkal
- 12. 10. Effect of fire work waste on atmosphere in Sivakasi region

### Sample Questions for Course Outcome Assessment\*\* Course Outcome 1(CO1):

- 1. Describe the Universal Energy flow model in an Ecosystem.
- 2. Discuss the conversion of one ecosystem into another ecosystem with example.

3. Explain the multidisciplinary nature of the environment.

# Course Outcome 2 (CO2):

- 1. Summarize the importance of Natural resources to animals and human beings.
- 2. Describe the role of an individual in the conservation of Natural resources.

# Course Outcome 3(CO3):

- 1. Demonstrate the effects and control measures of air pollution
- 2. Investigate the sources and management methods of e-waste.

# Course Outcome 4(CO4):

- 1. Dramatize the mitigation methods adopted in severe cyclone affected areas.
- 2. Suggest the precautionary steps to prevent life from flood.

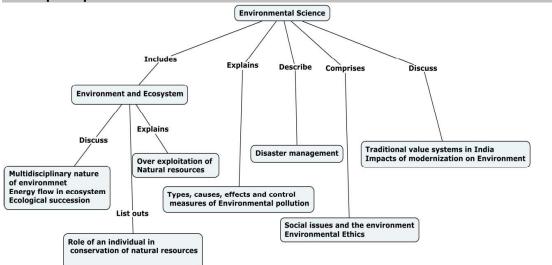

# Course Outcome 5 (CO5):

- 1. Discuss the need for public awareness on environmental protection.
- 2. Identify the requirement for the equitable utilization of natural resources.

### Course Outcome 6(CO6):

- 1. Describe the traditional value systems of India.
- 2. Recall the environmental related points discussed in our Indian Vedas.
- 3. List out the impacts of modernization on environment

### Concept map:

# Syllabus

**Environment and Ecosystem -** Multidisciplinary nature of environment- Ecosystem- Energy flow in ecosystem-Ecological succession-Over exploitation of Natural resources-Role of an individual in conservation of natural resources. **Environmental pollution and control -** Environmental pollution – types, causes, effects and control measures - Disaster management strategies. **Environmental Ethics and Values -** Social issues and the environment -need for public awareness, Environmental Ethics- need for equitable utilization of natural resources- Traditional value systems in India, Impacts of modernization on Environment

# Awareness and actual activities:

- ✓ Group meeting on water management, promotion of recycle use, reduction of waste,
- ✓ Plantation
- ✓ Cleanliness drive
- ✓ Drive on segregation of waste
- ✓ Energy saving
- ✓ Lectures by Environmentalist
- ✓ Slogan and poster making event

### Preamble

Differential equation is one of major part of mathematics through which we can express most of the real problem in mathematical expression. This course will explain the basic concept of special functions and how to solve the problem. It also develops student's skills in the formulation, solution, understanding and interpretation of PDE models. Near the end of the course, we combine previous ideas to solve an initial boundary value problem for a particular partial differential equation, the heat propogation equation etc.

### Prerequisite

Differential Equations, Integration.

### **Course Outcomes**

On the successful completion of the course students will be able to

| СО     | Course Outcome Statement   | Weightage*** |
|--------|--|--------------|
| Number |  | in %         |
| CO1    | Define operations with special functions.  | 10%          |
| CO2    | Solve a linear ordinary differential equation with variable coefficients.  | 15%          |
| CO3    | Produce a Fourier series of a given periodic function by evaluating Fourier coefficients   | 20%          |
| CO4    | Review basic properties of PDE's   | 10%          |
| CO5    | Solve Partial Differential Equations arising in engineering problems like Wave equation, Heat flow equation and other related equations by Fourier series. | 15%          |
| CO6    | Compute the solution of the wave, diffusion and Laplace equations using the Fourier series   | 30%          |

### **Assessment Pattern: Cognitive Domain**

# Sample Questions for course outcome Assessment Course Outcome 1 (CO1):

1. Define Legendre's Equation.

2. Write down the extension of the factorial  $a_0 = \frac{1}{2^n n!}$  in Bessel function using gamma

function.

3. State linear dependence of Bessel functions J<sub>n</sub> and J<sub>-n</sub>.

Course Outcome 2 (CO2):

1. Using indicated substitution, find a general solution in terms of  $J_v$  and  $J_{-v}$  for the ODE

$$x^{2}y'' + xy' + (x^{2} - \frac{1}{16})y = 0$$

- 2. Derive  $P_0$  to  $p_5$  from the Legendre polynomial  $p_n(x)$ .
- 3. Using indicated substitution, find a general solution in terms of J<sub>v</sub> and Y<sub>v</sub> for the ODE  $x^2v''+xv'+(x^2-25)v=0$ .

### Course Outcome 3 (CO3):

- Obtain the Fourier series expansion of the periodic function f(t) of period 2π defined by f(t)=t, 0<t<2π.</li>
- 2. Determine the half-range cosine series expansion of the function f(t)=2t-1, valid for 0 < t < 1.
- 3. Determine the complex form of the Fourier series expansion of the periodic function f(t)

defined by 
$$f(t) = \cos \frac{t}{2}, -\pi < t < \pi$$

### Course Outcome 4 (CO4):

- 1. Calculate the possible values of a and b in the expression u=cosatsinbx such that it satisfies the wave equation.
- 2. Identify whether the function  $u(x, y) = x^4 6x^2y^2 + y^4$  satisfies the Laplace equation.
- 3. Define Helmholtz equation.

### Course Outcome 5 (CO5):

1. Show that  $u = u_0 \sin(\frac{\pi x}{L}) \cos(\frac{\pi ct}{L})$  satisfies the one dimensional wave equation and the

conditions

a) a given initial displacement  $u(x,0) = u_0 \sin(\frac{\pi x}{L})$ , and

b) zero initial velocity, 
$$\frac{\partial u(x,0)}{\partial t} = 0$$

2. Show that the function  $T = \frac{1}{\sqrt{t}} \exp(-\frac{x^2}{4kt})$  satisfies the one dimensional heat-conduction equation.

3. Evaluate the general solution u(x,t), of the partial difference equation  $\frac{\partial u}{\partial t} + \frac{\partial u}{\partial x} = 0$ .

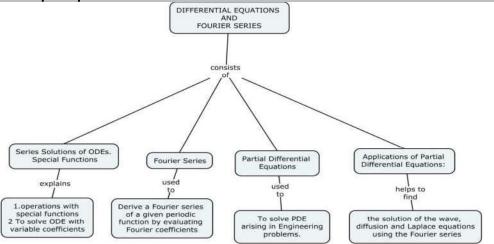

### Course Outcome 6 (CO6):

- 1. Solve the wave equation for vibrations in an organ pipe subject to the boundary conditions
  - a) u(0,t)=0,  $t\geq 0$ , the end x=0 is closed.
  - b)  $\frac{\partial u(l,t)}{\partial x} = 0$ , t≥0, the end x=l is open.
  - c) u(x,0)=0,  $0 \le x \le I$ , the pipe is initially undisturbed.
  - d)  $\frac{\partial u(x,0)}{\partial t} = v = cons \tan t$ ., the pipe is given an initial uniform blow.
- 2. Solve the heat equation  $\frac{\partial u}{\partial t} = k \frac{\partial^2 u}{\partial x^2}$  subject to the boundary conditions
  - a) u(0,t)=0, t≥0
  - b) u(l,t)=0, t≥0

c) 
$$u(x,0)=u_0(\frac{1}{2}-\frac{x}{l}), 0 < x < l.$$

- 3. Solve the Laplace equation for steady heat equation in the semi-infinite region  $0 \le y \le 1, x \ge 0$  and subject to the boundary conditions
  - a) u(x,0)=0, x≥0
  - b) u(x,1)=0, x≥0
  - c)  $u(x,y) \rightarrow 0$  as  $x \rightarrow \infty$

### **Concept Map**

### Syllabus

**Series Solutions of ODEs. Special Functions**: Legendre's Equation. Legendre Polynomials; Bessel's Equation. Bessel Functions of the First kind and second kind; Bessel's function using Gamma function. **Fourier Series**: periodic functions; Fourier's theorem; The Fourier coefficients; Functions of period 2π; Even and odd functions; Even and odd harmonics; Functions of period T; Full range series; Half-range cosine and sine series; complex form of Fourier series: Complex representation; The multiplication theorem and Parseval's theorem. **Partial Differential Equations**: Basic Concepts; Wave equation; Heat conduction or diffusion; Laplace equation; other and related equations; Arbitrary functions. **Applications of Partial Differential Equations**: Formulation and Solution of the wave equation; D'Alembert's solution and characteristics; separated solutions; Laplace transform solution; Solutions of the diffusion equation; Separated solutions.

### Learning Resources

1. Erwin Kreszig, "Advanced Engineering Mathematics", 9<sup>th</sup> edition, Wiley, 2017.

Series Solutions of ODEs. Special Functions :5.3, 5.5, 5.6.

2. Glyn James "Advanced Engineering mathematics", Pearson Education New Delhi, Third Edition, 2016.

Fourier Series: 4.2.1, 4.2.2, 4.2.3, 4.2.4, 4.2.5, 4.2.6, 4.2.10, 4.3.1, 4.3.2, 4.6.1, 4.6.2.

Partial Differential Equations: 9.2.1, 9.2.2, 9.2.3, 9.2.4, 9.2.5.

Applications of Partial Differential Equations: 9.3.1, 9.3.2, 9.3.3, 9.4.1, 9.4.2, 9.5.1.

MECHANICS OF SOLIDS

| Category | L | Т | Ρ | Credit |
|----------|---|---|---|--------|
| PC       | 2 | 1 | 0 | 3      |

### Preamble

This course offers the basic modules of mechanics of solids such as articulated structures, suspension cables and suspension bridges. This course aims at determination of axial and bending stresses, design of circular shafts, slope and deflection of beams, effect of moving loads and construction of influence lines.

#### Prerequisite

Fundamentals of Engineering Mathematics and physics.

### Course Outcomes

On the successful completion of the course students will be able to

| CO     | Course Outcome Statement  | Weightage*** |
|--------|---|--------------|
| Number |   | in %         |
| CO1    | Compute axial and bending stress.   | 20           |
| CO2    | Select sections for circular shafts.  | 16           |
| CO3    | Determine slope and deflection of determinate beams.  | 20           |
| CO4    | Calculate forces in a member of truss.  | 16           |
| CO5    | Demonstrate the effect of moving loads and to construct influence line diagram for determinate beams. | 12           |
| CO6    | Analyse suspension cables, three hinged stiffening girders and three hinged arches.                   | 16           |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

### Sample Questions for Course Outcome Assessment\*\*

### Course Outcome 1 (CO1):

- 1. A rectangular column of size 250mm x 350mm is subjected to a load of 500kN at 120mm from the shorter edge and 45mm from the longer edge. Determine the stress distribution. What is the maximum load the column can sustain if the permissible stresses are +3.5 MPa and -35.0 MPa.
- 2. A 6m long truss member comprises two ISA 100x100x10 section placed back to back. Determine its maximum load carrying capacity assuming E = 190GPa and  $\sigma$ y = 360MPa.
- 3. A mild steel square tube of external dimensions 100mm and 5mm wall thickness is 3.6m long. Determine the maximum permissible eccentricity of load in the axial direction if the load is 80 percent of the Euler's load. Assume E = 200GPa and  $\sigma$ y = 250MPa when
  - i.) Both ends are hinged

ii.) One end is fixed and other end is free

### Course Outcome 2 (CO2):

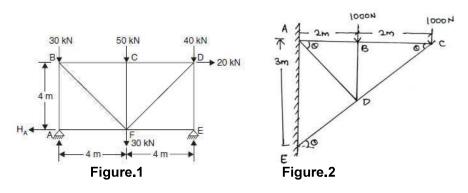

- 1. Find the power transmitted by a shaft of 60mm diameter at 3Hz. If the maximum permissible shear stress is 70N/mm<sup>2</sup>.
- 2. A solid shaft has to transmit 337.5kW at 100rpm. If the shear stress is not to exceed 65N/mm<sup>2</sup> and the internal diameter is 0.6 of the external diameter, find the external and internal diameters assuming that the maximum torque is 1.3times the mean.

### Course Outcome 3 (CO3):

- 1. Develop the governing differential equation of beams.
- 2. A cantilever beam of span 6m is subjected to two point loads of 10kN and 15kN at 6m and 4m from the fixed end. Obtain the slope and deflection under the load points.
- 3. A simply supported beam of span 4.5m is subjected to a uniformly distributed load of 12kN/m over the left half of the span. Obtain the maximum deflection using Macaulay's method.

### Course Outcome 4 (CO4):

1. Determine the force in the members of the truss shown in the following Figure.1

- 2. Determine the force in the members of the cantilever truss shown in Figure.2
- 3. Determine the force in the members BC, CE and EF of the truss of Figure.1 using method of sections.

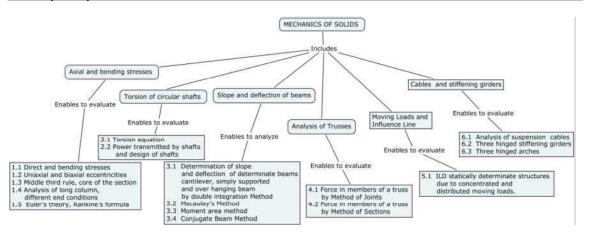

### Course Outcome 5 (CO5):

- 1. Mention the propositions related to two point loads.
- 2. A uniformly distributed load of intensity 30kN/m crosses a simply supported beam of span 60m from left to right. The length of udl is 15m. Find the value of maximum bending moment at a section 20m from left end. Find also the absolute maximum bending moment and shear force in the beam.
- 3. Construct the influence line diagram for shear force at section 3m and for bending moment at 4m for a simply supported beam of span 6m. Using the influence line diagram, obtain the shear force at 3m and bending moment at 4m if the beam is subjected to two point loads of 15kN and 20kN at 1.5m and 4.5m respectively.

#### Course Outcome 6 (CO6):

- 1 A suspension cable 100m span and 15m dip is stiffened with a three hinged girder. If a concentrated load of magnitude 100kN crosses the span, determine the maximum tension in the cable. Also, determine the greatest bending moment and shear force in the stiffening girder. State the position of the load in the above cases.
- A light cable 18m long is supported at two ends at the same level. The supports are 16m apart. The cable supports 120N load dividing the distance into two equal parts. Find the shape of the cable and the tension in the cable.
- A three hinged symmetric parabolic arch of span 60m and rise 12m is subjected to a concentrated load of 40kN acting at a distance 10m from its left support and a uniformly distributed load of intensity 10kN/m acting over its entire right half portion. Draw the bending moment diagram.

#### Concept Map

### **Syllabus**

Axial and bending stresses: Direct and bending stresses – uniaxial and biaxial eccentricities – middle third rule - core of the section - analysis of long column - different end conditions -Euler's theory – Rankine's formula. Torsion of circular shafts: Introduction – derivation of torsion equation – assumptions – power transmitted by shafts – design of shafts. Slope and deflection of beams: Determination of slope and deflection of determinate beams - cantilever, simply supported and over hanging beam - Double Integration Method, Macaulay's Method, Moment area Method and Conjugate Beam Method. Analysis of Trusses: Force in members of a truss – Method of Joints – Method of Sections. Moving Loads and Influence Line: Influence lines for reactions, shear force and bending moment in statically determinate structures due to concentrated and distributed moving loads. Cables, stiffening girders and arches: Analysis of cables, three hinged stiffening girders and three hinged arches.

### Preamble

Fluid Mechanics is a subject of engineering science deals with the behavior of fluids at rest as well as in motion. It is an important subject with unlimited practical applications ranging from biological systems to automobiles, airplanes and spacecraft propulsion. Thus this subject is given considerable importance in Civil, Mechanical and Chemical Engineering at core as well as at professional levels.

#### Prerequisite

18MA110, 18PHA20, 18MA210

### Course Outcomes

On the successful completion of the course students will be able to

| CO     | Course Outcome Statement  | Weightage*** |
|--------|---|--------------|
| Number |   | in %         |
| CO1    | Apply the knowledge of fluid properties in real fluid flow problems     | 11           |
| CO2    | Determine the pressure of fluids in pipes as well as hydrostatic forces | 14           |
|        | in submerged planes.  |              |
| CO3    | Calculate the velocity and acceleration of fluids in pipes.             | 14           |
| CO4    | Apply Bernoulli's theorem to solve a variety of fluid flow problems.    | 20           |
| CO5    | Calculate the major and minor losses in flow through pipes.             | 33           |

### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

### Course Outcome 1(CO1):

- 1. A cylindrical shaft of 90mm diameter rotates about a vertical axis inside a fixed cylindrical tube of length 50cm and 95mm diameter. If the space between the tube and shaft is filled by a lubricant of viscosity 2 poise, determine the power required to overcome viscous resistance when the shaft is rotated at a speed of 240 rpm
- 2. The space between the two square flat parallel plates is filled with oil. Each side of the plate is 75cm. The thickness of the oil film is 15mm. The upper plate which moves at 3m/s requires a force of 120N to maintain the speed, Determine (i) The dynamic viscosity of oil and (ii) The kinematic viscosity of oil, if the specific gravity of oil is 0.95.
- 3. A mass of liquid weighs 500 N when exposed to standard earth's gravity g = 9.81m/s<sup>2</sup>. (i) What is its mass? and (ii) What will be its weight in a planet with acceleration due to gravity of 3.5m/s<sup>2</sup>.

### Course Outcome 2 (CO2):

- 1. U tube differential mercury manometer is connected on one side to pipe A containing oil of specific gravity 1.5 while on the other side to pipe B containing oil of specific gravity 0.9. The pipe A lies 3m below pipe B. The mercury level in the limb communicating with pipe A lies 2m below the center of pipe A and 3m below center of pipe B in the limb communicating with pipe B. Determine the difference in pressure between the two pipes.
- 2. A 6m deep tank contains 4 m of water and 2 m of oil of relative density 0.88. Determine the pressure at the bottom of the tank and at the interface of two liquids.
- 3. Determine the total pressure on a circular plate of diameter 1.5m which is placed vertically in water in such a way that the centre of plate is 3m below the free surface of water. Find the position of centre of pressure also.

### Course Outcome 3 (CO3):

- In a two dimensional incompressible flow field the velocity components are expressed as u = 2x x<sup>2</sup>y + y<sup>3</sup>/3, v = xy<sup>2</sup> 2y x<sup>3</sup>/3,
   (i) In the flow possible 2 k as obtain an expression for the stream function.
  - (i) Is the flow possible? If so obtain an expression for the stream function.(ii) Determine the velocity potential function also.
- 2. In a two dimensional incompressible flow, the fluid velocity components are given by u = x-4y and v = -y-4x. Show that the velocity potential exists and determine its form. Find also the stream function.
- 3. The diameters of a pipe at the sections X and Y are 10 cm and 20 cm respectively. Find the discharge through the pipe if the velocity of water flowing through the pipe at X is 3.0 m/s. Also find the velocity at section Y.

### Course Outcome 4 (CO4):

- 1. A pipe carrying water has a 30 cm x 15 cm venturimeter which is positioned inclined at  $30^{\circ}$  to the horizontal. The flow is upwards. The converging cone is 45 cm in length and C<sub>d</sub> = 0.98. A differential U tube mercury manometer connected to inlet and throat shows a reading of 30 cm. (i) Calculate the discharge in the pipe and (ii) If the pressure at the inlet is 50 N/cm<sup>2</sup>, determine the pressure at the throat.
- 2. In a smooth pipe of uniform diameter 25cm a pressure of 50N/cm<sup>2</sup> was observed at section 1 which was at elevation of 10m. At another section 2 at elevation of 12m the pressure was 20N/cm<sup>2</sup> and the velocity was 1.25m/s. Determine the direction of flow and the head loss between the two sections. Water is flowing through the pipe.
- 3. Derive the Bernoulli's equation from fundamental stating all assumptions made.

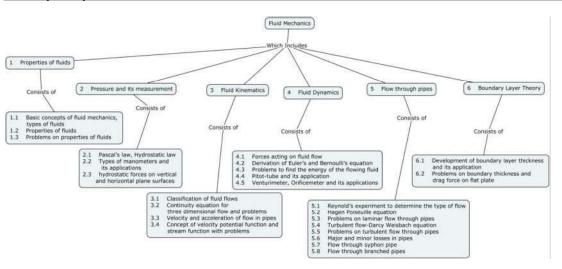

### Course Outcome 5 (CO5):

- An oil of viscosity 8 poise and specific gravity 0.9 is flowing through a horizontal pipe of 50 mm diameter. If the pressure drop in 100m length of the pipe is 2000 kN/m<sup>2</sup>, determine (i) Rate of flow of oil, (ii) Centre line velocity, (iii) Total frictional drag over 100m length of pipe and (iv) Velocity and shear stress at 10 mm from the wall. Assume laminar flow through the pipe
- 2. The difference in water surface levels in two tanks which are connected by three pipes in series of length 350 m, 200 m and 250 m and diameters 20 cm, 30 cm and 15 cm respectively is 20 m. Determine the rate of flow of water, if coefficient of friction for these pipes is same and equal to 0.005 by considering all losses.
- 3. A reservoir discharges its liquids through a horizontal pipeline into the atmosphere. The pipeline consists of two pipes, one of 10 cm diameter and 25 m long and another 12 cm diameter and 35 m long connected in series. The friction coefficient f = 0.005 for both the pipes. The water level in the tank is 10 m above centre line of the pipe at the entrance. Calculate the discharge when the 10 cm diameter pipe is joined to the tank.

### Course Outcome 6 (CO6):

- 1. Describe the development of boundary layer and its importance with neat sketch.
- 2. Find the displacement thickness, momentum thickness, energy thickness and shape factor for the velocity distribution in the boundary layer is given by  $u / U = (y / \delta)^{1/7}$  where  $\delta$  = boundary layer thickness.
- 3. The velocity distribution in the boundary layer is given by  $u / U = y / \delta$ , where u is the velocity at a distance of y from the plate and u = U at  $y = \delta$ ,  $\delta$  being boundary layer thickness. Find the displacement thickness, momentum thickness, energy thickness and shape factor.

#### **Concept Map**

#### Syllabus

**Fluid Properties:** Density, Specific weight, Specific volume, Specific gravity, Viscosity, Kinematic viscosity, Surface tension, Compressibility, Capillarity, types of fluids. **Pressure Measurements:** Pascal's law, Hydrostatic law, Manometers, hydrostatic forces on vertical and horizontal plane surfaces, **Fluid Kinematics:** Types of fluid flows, continuity equation, velocity and acceleration, potential function and stream function. **Fluid Dynamics:** Euler's equation, Bernoulli's equation and its applications in flow measuring devices like Pitot tube, Venturimeter and Orificemeter. **Flow through pipes:** Reynold's experiment, Laminar and turbulent flow through circular pipes, major and minor losses in pipes, flow through syphon, flow through branched pipes. **Boundary Layer Theory:** Boundary layer theory and its application, drag force on a flat plate

### Preamble

This course work aims at imparting the knowledge on various stages of works involved in planning, designing and execution of protected water supply system to a town/city. Starting from demand estimation, identification of sources, studying the quality aspects of water at these sources, evolving a suitable treatment method to bring the quality to the permissible standards and finally, distribution of this treated water to the individual dwelling units are well addressed. **Course Outcomes** 

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement   | Weightage***<br>in % |
|--------------|--|----------------------|
| CO1          | Estimate the total water demand for a town/city  | 15                   |
| CO2          | Identify suitable sources of water to meet the demand  | 10                   |
| CO3          | Design the conduits for transportation of water from the source to treatment plant and to the city | 15                   |
| CO4          | Prepare the physical, Chemical and biological characteristics of different sources of water        | 15                   |
| CO5          | Design an appropriate treatment system for the water available at the source                       | 25                   |
| CO6          | Design a good water distribution system for a town/city.   | 20                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

### **Assessment Pattern: Cognitive Domain**

### Assessment Pattern: Psychomotor

| Psychomotor Skill       | Mini project / Assignment / Practical Component |
|-------------------------|---|
| Perception              | -   |
| Set                     | -   |
| Guided Response         | 50  |
| Mechanism               | 50  |
| Complex Overt Responses | -   |
| Adaptation              | -   |
| Origination             | -   |

### Sample Questions for Course Outcome Assessment\*\*

### Course Outcome1 (CO1):

- 1. Identify design period for different components of water supply system
- 2. Describe fluctuation in water demand
- 3. Explain the factors affecting per capita demand of a city
- 4. Identify a suitable method for prediction future population of a rapidly growing city

### Course Outcome 2(CO2):

- 1. List the different groundwater sources available
- 2. Explain the factors influencing the selection of a particular source of water for a town
- 3. Show the importance of selection of an appropriate site for a river intake

### Course Outcome3(CO3):

### 1. Distinguish gravity system from pumping system of water supply

2. A water supply scheme is to be designed for serving a population of 6.0 Lakhs, the storage reservoir is situated at 15 Km away from the city and the loss of head from the source to the city is 20m. Calculate the size of the supply main using Darcy and Hazen William formula. Take f = 0.012,  $C_H = 130$  and maximum daily demand as 200 lpcd. The entire day demand is to be supplied in 10 hours.

### Course Outcome 4 (CO4):

- 1. Demonstrate the procedure for fixing biological character for water
- 2. Distinguish safe water from wholesome water
- 3. Identify the importance of chemical characters of water

### Course Outcome 5 (CO5):

- 1. Describe the mechanisms of removal in filtration process
- 2. Explain the theory of chlorination and the factors affecting chlorination
- 3. Design a rapid sand filter to treat 10 million litres of raw water per day allowing 0.5% of filtered water for backwashing. Half hour per day is used for backwashing. Assume necessary data.

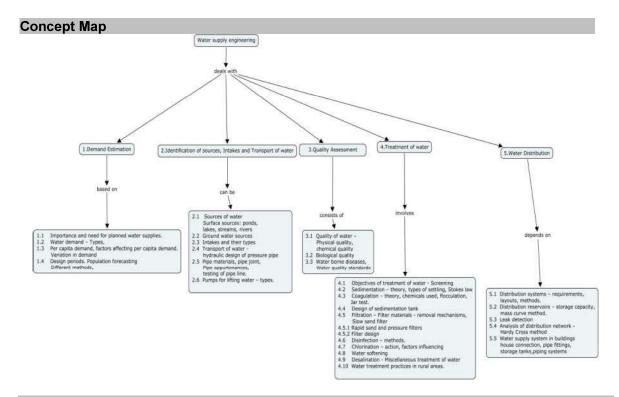

### Course Outcome6(CO6):

- 1. Explain the merits of grid iron system over dead end system
- 2. Demonstrate the procedure for detecting leakages in a pipe main

3. A town with a population of 1 million has a continuous water supply. Average supply in 270LPCD, the water being supplied by direct pumping. The total supply of 270 lpcd is phased as follows:

| Time                 | Lpcd |
|----------------------|------|
| 5A.M to 11 A.M       | 90   |
| 11A.M to 3 P.M       | 54   |
| 3 P.M to 9 P.M       | 81   |
| 9 P.M to 12 Midnight | 27   |
| 12 Midnight to 5 A.M | 18   |

Water is supplied from the treatment plant at a uniform rate of 11.25 million litres per hour, for all the 24 hours. Find out the capacity of the reservoir required for distribution of water. Assume no loss or drawal from the trunk main

### Syllabus

**Demand Estimation** - Importance and need for planned water supplies, water demand – Types, per capita demand, factors affecting per capita demand, variation in demand, Design periods, and population forecasting, different methods. **Identification of sources, Intakes and Transport of water** - Sources of water, Surface sources, ponds, lakes, streams, rivers, Ground water sources, occurrence, aquifers and their types, Wells - open wells, Tube wells, springs and their types, Infiltration galleries, Infiltration wells, Intakes and their types. Transport of water, hydraulic design of pressure pipe, Pipe materials, pipe joints, pipe appurtenances, testing of pipe line, Pumps for lifting water and its types. **Quality Assessment** - Quality of water, Physical quality, chemical quality, Biological quality, waterborne diseases, Water quality standards. **Treatment of water** – Screening - Sedimentation – theory, types of settling, Stokes law - Coagulation – theory, chemicals used, flocculation, Jar test, design of sedimentation tank, Filtration – removal mechanisms, filter media, types, slow sand, rapid sand and pressure filters, filter design. Disinfection, Chlorination – action, factors influencing, free chlorination, combined chlorination, ozonation, UV radiation, water softening, Desalination, Reverse Osmosis, Miscellaneous treatment of water, water treatment practices in rural areas, Reuse water quality

standards, Sludge reuse options. **Water Distribution** - Distribution systems – requirements, layouts and methods, Distribution reservoirs, storage capacity, mass curve method, Leak detection – Importance of Non-Revenue water, Analysis of distribution network, Hardy Cross method, Water supply system in buildings, house connection, pipe fittings, storage tanks, piping systems, Two pipe system, recycled water, Sotwares – EPANET, WATER GEMS and WATER CAD.

PROGRAMMING FOR PROBLEM SOLVING

| Category | L | Т | Ρ | Credit |
|----------|---|---|---|--------|
| ES       | 2 | 0 | 0 | 2      |

### Preamble

This course enables students to learn about different problem-solving techniques and the design of computer solutions in a precise manner. The course emphasizes problem-solving techniques, design and development of algorithms and computer-programming skills. Upon completion of the course, the students will be able to master the principles of structured programming and demonstrate significant experience in problem solving.

### Prerequisite

### Nil

### Course Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement   | Weightage<br>in % |
|--------------|--|-------------------|
| CO1          | Explain the program design and problem solving aspects used to provide a solution for the given problem and develop flowcharts for modelling the solution.                             | 10                |
| CO2          | Develop algorithms for solving simple mathematical and<br>engineering problems and examine the suitability of appropriate<br>repetition and/or selection structures for given problems | 25                |
| CO3          | Solve problems related to matrix manipulations using array processing techniques.  | 15                |
| CO4          | Construct solutions for string manipulation and numeric problems using modularization or recursion concepts as applicable.   | 20                |
| CO5          | Develop algorithms and programs for solving various searching and sorting problems.  | 15                |
| CO6          | Build programs for the storage, retrieval and processing of data using structures and files.   | 15                |

| Mechanism               | 90  |
| Complex Overt Responses | -   |
| Adaptation              | -   |
| Origination             | -   |

## Sample Questions for Course Outcome Assessment

### Course Outcome1(CO1):

- 1. Explain the pseudo code to exchange the value of variables without using third variable (Understand)
- 2. Draw the flowchart to find the average among three numbers (Understand)
- 3. Give the pseudo code for calculating the net salary considering the allowances and deductions.(Understand)

### Course Outcome2(CO2):

- 1. Write a program to check whether a number is prime or not (Apply)
- 2. Write a C Program to find the sum of digits of a given integer. (Apply)
- 3. Write a C Program to find all roots of a Quadratic Equation (Apply)

### Course Outcome 3(CO3):

- 1. Develop a C Program to generate multiplication table (Apply)
- 2. Give an algorithm to find the inverse of a matrix. (Apply)

3. Write a C Program to calculate average using Arrays (Apply)

### Course Outcome 4 (CO4):

- 1. Develop a C Program to display prime numbers between intervals using function (Apply)
- 2. Develop a C Program to check whether the given string is palindrome using function. (Apply)
- 3. Develop a C Program to calculate the power using recursion (Apply)

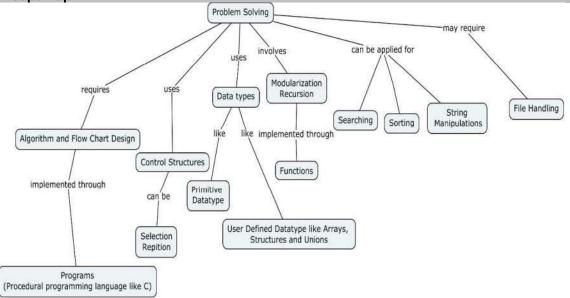

### Course Outcome 5 (CO5):

- 1. Given an array arr = {5, 10, 87, 43, 29} and key = 43; How many iterations are done until the element is found in Binary Search? (Apply)
- 2. Demonstrate the working of bubble sort on the following set of numbers : {22, 67, 12, 3, 76, 41, 59, 37} (Apply).
- 3. Write a C program to sort the numbers using selection sort. (Apply).

### Course Outcome 6(CO6):

- 1. Develop a C Program to read a line of text from a file and display the same (Apply).
- 2. Write a C Program to count the number of vowels in a text file (Apply).
- 3. Write a C Program to add two Complex Numbers by using structure (Apply)

### Concept Map

### Syllabus

**Introduction to Computer Problem Solving** – Problem solving aspect –Top-down Design – Implementation of Algorithm – Flowcharts. **Fundamentals Algorithms** - Exchanging values of variables, Counting. **Fundamentals of Programming** – Data types, Input and Output Statements, Operators and Expressions , Control structures - Selection Control Structures -Repetition Control Structures - Summation of set of numbers -- Sine function computation - -Reversing the digits of an Integer, Factoring Methods - Finding square root of a number -The smallest divisor of an integer, Generating Prime numbers. **Array Techniques**–Use of 1D and 2D arrays, Finding the maximum number in a set - Finding k<sup>th</sup> smallest number, Partitioning an array - Matrix manipulations – Addition, Multiplication and Transpose. **Functions and Recursion**-Function Declaration, definition and execution, Factorial computation, Fibonacci sequence generation, String Manipulations – comparison between strings, copying of strings, searching for substring. **Sorting and Searching Algorithms** – Bubble sort, sorting by selection, Linear Search, Binary search. **Structures and Files**—Structures – Storing and accessing elements, Array of Structures – Files – Read and Write operations on text files.

COMPUTER AIDED DRAFTING LAB

| Category | L | Т | Ρ | Credit |
|----------|---|---|---|--------|
| PC       |   |   | 2 | 1      |

### Preamble

This laboratory course work is intended to provide students with opportunities to acquire knowledge and to develop skills in drafting the different views of the components of the building structures using available drafting software and capable of viewing and drawing the plan, elevation and section of the different types of the building. The course shows how to use AutoCAD to set up drawings and construct lines, circles, arcs, other shapes, geometric constructions, and text. Students will use display and editing techniques as well to obtain information about their drawings and work with drawing files. This course also introduces recommended drafting standards for students to use for properly preparing drawings with AutoCAD.

### Prerequisites

18ME160 – Engineering Graphics;

### 18CE260 - Building Materials and Technology

#### **Course Outcomes**

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Draw 2D drawing using basic drawing and editing commands  | 15                   |
| CO2          | Manage the files, views, layers, display commands   | 15                   |
| CO3          | Create symbols using the concept of blocks, W blocks & Xref   | 25                   |
| CO4          | Publish and plot the drawing with annotations & dimensioning,<br>using the concept of paper space & model space and specific<br>scales. | 25                   |
| CO5          | Draw and edit 3D models using UCS   | 20                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours.

### Preamble

Design has been defined as a "systematic, intelligent process in which designers generate, evaluate, and specify concepts for devices, systems, or processes whose form and function achieve clients' objectives or users' needs while satisfying a specified set of constraints". Human-centered design is defined as a process and a set of techniques used to create new solutions for the world. Solutions include products, services, environments, organizations, and modes of interaction. The reason this process is called "human-centered" is because it starts with the people we are designing for. This course facilitates the development of students' professional skills through their team engagement in developing conceptual design for a local community problem.

- Reports are to be submitted at each review. The report and presentation will be evaluated based on Rubrics
- Demonstration and Poster presentation will be evaluated by two faculty members nominated by their respective Head of the Department.

### Syllabus

**1.0 Project Identification:** Needs Assessment, Stakeholder Identification, Stakeholder Requirement Project Time Constraint.

2.0 Specification Development: Description Problem Environment, Creation of Stakeholder's Profiles Development of Low-cost Prototypes, Development of Task-Analysis, Comparison with Benchmark Products, Development of Customer Specification, Development of Evaluation Criteria,
 3.0 Conceptual Design: Conduct of Functional Decomposition, Brainstroming of possible solutions, Creation of Prototypes for Multiple Concepts, Refinement of Design Specification on users' feedback, Evaluation of Potential Solutions, Selection of best design.

### Preamble

Statistics as a subject is a science of learning from data and provides tools for making decisions when conditions of uncertainty prevail. Statistical techniques are an important tool in these activities because they provide the engineer with both descriptive and analytical methods for dealing with the variability in observed data. A civil engineer plays a significant role in designing and developing new projects and improving systems and processes. This course is designed to impart the knowledge and understanding of the statistical techniques to Civil engineers and to apply them in their areas of specialization.

### Prerequisite

**Basics of Probability** 

### **Course Outcomes**

On the successful completion of the course students will be able to

| СО     | Course Outcome Statement  | Weightage*** |
|--------|---|--------------|
| Number |   | in %         |
| CO1    | Use Bayes formula to invert conditional probabilities.  | 15%          |
| CO2    | Identify expectation, moments, moment generating functions  | 15%          |
| CO3    | Apply discrete and continuous distributions to determine mass<br>and density functions and concept of stochastic process          | 20%          |
| CO4    | CO4 Describe the concept of least square method in fitting linear regression curves   |              |
| CO5    | compute population estimators   | 15%          |
| CO6    | Explain the test of hypothesis for small and large samples by using various tests like t-test, F-test, z-test and chi-square test | 20%          |

### Sample Questions for Course Outcome Assessment\*\*

### Course Outcome1 (CO1):

- 1. A and B toss affair coin alternately with the understanding that the one who obtains the head first wins. If A starts, calculate his chance of winning
- 2. If A and B are mutually exclusive events then prove that (PB/A) = 0
- A box contains 2000 components of which 5% are defective. A second box contains 50 components of which 40% are defective. Two other boxes contain 1000 components, each with 10% defective components. We select at random one of the above boxes and remove from it at random a single component.(a) calculate the probability that the component is defective? (b) If the selected component is defective, then calculate the probability that it was drawn from box 2?

### Course Outcome 2 (CO2):

- 1. Identify the following as discrete or continuous random variable
  - a. Total number of gold medals won by India in Asian games 2018
  - b. Height of the ocean's tide at Kanyakumari
  - c. Number of deer born per year in a state wildlife preserve
  - d. The amount of water released from Mettur dam this month
- 2. Identify the moment generating function of the random variable X given the probability

density function  $f(x) = 2e^{-2x}$ ; x > 0

3. Explain the statistics of random processes

### Course Outcome 3(CO3):

- 1. If you apply brakes, compute the probability that you will brake to a stop within 40 feet or less? Within 50 feet or less
- 2. Assume that the chance of an individual coal miner being killed in an accident during a year is 1/1400. Calculate the probability that in a mine employing 350 miners, there will be at least one fatal accident in a year by Poisson distribution
- 3. At a certain examination 10% of the students who appeared for the paper in Statistics got less than 30 marks and 97% of the students got less than 62 marks. Assuming the

distribution is normal, calculate the mean and Standard deviation of the distribution. **Course Outcome 4 (CO4):** 

- 1. Describe the method of least squares in fitting a regression curve
- Match least square method to fit an exponential curve of the form Y = ab<sup>X</sup> to the following data

| Х | 1   | 2   | 3   | 4   | 5   | 6   | 7   | 8   |
|---|-----|-----|-----|-----|-----|-----|-----|-----|
| Y | 1.0 | 1.2 | 1.8 | 2.5 | 3.6 | 4.7 | 6.6 | 9.1 |
|   |     |     |     |     |     |     |     |     |

3. The two regression lines are 4x - 5y + 53 = 0 and 20x - 9y = 107 and variance of X is 25. know the values correlation coefficient and variance of Y

### Course Outcome 5 (CO5):

1. List the properties of estimation

- 2 .X<sub>1</sub>, X<sub>2</sub>, and X3 is a random sample of size 3 from a population with mean  $\mu$  and variance  $\sigma^2$ . T<sub>1</sub>, T<sub>2</sub>, T<sub>3</sub> are the estimators used to estimate the mean value  $\mu$ , where T<sub>1</sub> = X<sub>1</sub> + X<sub>2</sub> X<sub>3</sub>; T<sub>2</sub> = 2 X<sub>1</sub> + 3 X<sub>3</sub> 4 X<sub>2</sub> and T<sub>3</sub> = 1/3( $\lambda$  X<sub>1</sub> + X<sub>2</sub> + X<sub>3</sub>) (i) Are T<sub>1</sub> and T<sub>2</sub> unbiased estimators? Compute  $\lambda$  such that T<sub>3</sub> is an unbiased estimator for  $\mu$
- 3. Calculate the maximum likelihood estimator for  $\lambda$  when f(x;  $\lambda$ ) is the Poisson distribution

### Course Outcome 6(CO6):

- 1. Explain Null hypothesis an alternate hypothesis
- 2. Twenty people were attacked by a disease and only 18 survived. Will you reject

the hypothesis that the survival rate if attacked by the disease is 85% in favour to

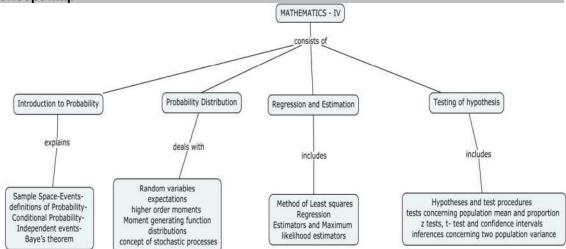

the hypothesis that it is more at 5% level?

3. The demand for a particular spare part in a factory found to vary from day-to-day. In a sample study the following information was obtained.

| Days         | Mon  | Tues | Wedn | Thurs | Fri  | Sat  |
|--------------|------|------|------|-------|------|------|
| No. of parts | 1124 | 1125 | 1110 | 1120  | 1126 | 1115 |
| demanded     |      |      |      |       |      |      |

Test the hypothesis that number of parts demanded does not depend on the day of the week.

### Concept Map

### Syllabus

**Introduction to Probability:** Population-Sample Space-Events- definitions of Probability-Axioms of probability-Conditional Probability- Independent events-Baye's theorem- **Probability Distribution:** Random variables- discrete and continuous random variables- expectations-higher order moments- Moment generating function- Binomial-Poisson-Normal distributions-Elementary concepts related to stochastic processes- **Regression and Estimation:** Least square estimation- Method of Least squares-Regression-linear regression-Estimators and their properties-Sufficient statistic and Maximum likelihood estimators- **Test of Hypothesis:** Hypotheses and test procedures - tests concerning a population mean - tests concerning a population proportion - *z* tests and confidence intervals for a difference between two Population means - the two-sample *t* Test and confidence interval - inferences concerning a difference between population proportion - inferences concerning two population variance

#### Preamble

This course offers the various methods of analysis for indeterminate beams and portal frames. It aims at determination of end moments and constructing shear force and bending moment diagrams for the beams and frames. Also, ILD for indeterminate beams will be dealt with.

#### Prerequisite

Fundamentals of Engineering Mechanics and Mechanics of Solids.

### Course Outcomes

On the successful completion of the course students will be able to

| CO     | Course Outcome Statement   | Weightage*** |
|--------|--|--------------|
| Number |  | in %         |
| CO1    | Construct ILD for indeterminate beams.   | 16           |
| CO2    | Analyse propped cantilever, fixed beam and frames by strain energy method.                   | 16           |
| CO3    | Analyse propped cantilever, fixed beams and continuous beams using theorem of three moments. | 14           |
| CO4    | Analyse beams and frames by slope deflection method.   | 14           |
| CO5    | Analyse beams and frames by moment distribution method.                                      | 20           |
| CO6    | Analyse beams and frames by matrix stiffness method.   | 20           |

\*\*\* Weightage depends on Bloom's Level, Number of Contact Hours.

| Origination             | -          |

#### Sample Questions for Course Outcome Assessment\*\*

#### Course Outcome 1(CO1):

- 1. Sketch the shape of influence line diagram for shear force at any section of a two span continuous beam of two equal spans
- 2. Draw the influence line diagram for reaction at A and B of a two span continuous beam ABC with simply supported ends having length AB=BC = 6m Compute ILD ordinates at 2m intervals.
- 3. Derive the influence line diagram for the prop reaction at B of a propped cantilever. Using the influence diagram, determine the prop reaction if the beam has a span of 8m and subjected to three point loads of 15kN, 10kN and 20kN at 2m,4m and 6.5m from the propped end.

#### Course Outcome 2(CO2):

- 1. A propped cantilever beam AB of span 6m is subjected to a uniformly distributed load of 15kN/m over the entire span and point loads of 10kN and 15kN at 2m and 4m respectively from the propped end B. Determine the prop reaction using strain energy method.
- 2. A propped cantilever beam AB of span 6m is subjected to a uniformly distributed load of 15kN/m over the entire span and a point load of 10kN at 2m from the propped end B. Determine the prop reaction using strain energy method.
- 3. A two span continuous beam of equal spans is subjected to a uniformly distributed load of 20kN/m over the entire length of both spans. Determine the reaction at mid support by strain energy method.

#### Course Outcome 3(CO3):

1. A circular rod of 100mm diameter and 500mm length is subjected to an axial force of A continuous beam ABC fixed at end A and continuous over supports B and C. The span AB=8m carries a uniformly distributed load of 6kN/m over the entire span. The span BC=5m carries a non-central concentrated load of 15kN acting at a distance of 3m from support B. Analyse the beam and draw bending moment diagram using theorem of three moments. (El is constant)

2. A continuous beam ABCD simply supported at ends A and D and continuous over supports B and C. The span AB=5m carries a non central concentrated load of 15kN at 2m from A. The span BC=4m carries a uniformly distributed load of 6kN/m over the entire span. The span CD=5m carries a central concentrated load of 10kN. Analyse the beam and draw bending moment diagram.Use theorem of three moments. (El is constant)

# Course Outcome 4 (CO4):

- A continuous beam ABCD of 14 metres span fixed at ends A and D and continuous over supports B and C. The span AB=5m carries a central load of 10kN.The span BC=4m carries a uniformly distributed load of 4kN/m over the span BC. The span CD=5m carries a central load of 8kN. Analyse the beam using slope deflection method and draw the bending moment diagram. (El is constant)
- 2. Analyze a rectangular portal frame ABCD with fixed end at A and hinged end at D having dimensions AB=6m, DC=4.0m, and the horizontal member BC=5.0m. The frame is loaded with a concentrated load of 60kN acting at a distance of 3.0 m from the rigid joint B on the member BC and a uniformly distributed load of 20kN/m over the entire length of the vertical member DC. Use slope deflection method and draw the bending moment diagram. (El is constant)

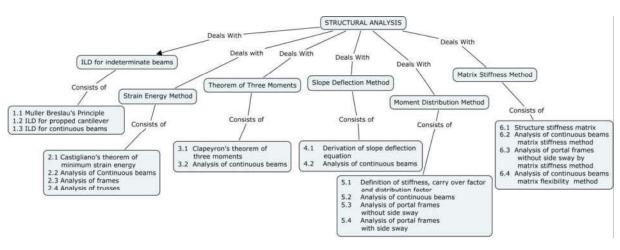

# Course Outcome 5 (CO5):

- 1 Calculate the end moments of a three span continuous beam ABCD of span AB=4.0m loaded with a uniformly distributed load of 20kN/m over the entire span, span BC=5.0m loaded with a point load of 40kN acting at 3.0m from B and span CD=5.0m loaded with 60kN acting at 2.0m from C with fixed ends at A and D. Use Moment distribution method.
- 2 Analyze a rectangular portal frame ABCD with fixed end at A and hinged end at D having dimensions AB=6m, DC=4.0m, and the horizontal member BC=5.0m. The frame is loaded with a concentrated load of 60kN acting at a distance of 3.0 m from the rigid joint B on the member BC and a uniformly distributed load of 20kN/m over the entire length of the vertical member DC. Use Moment distribution method.

# Course Outcome 6 (CO6):

- 1 A continuous beam ABC fixed at end A, continuous over support B and freely supported at C. The span AB=6m carries a uniformly distributed load of 15kN/m over the entire span. The span BC=5m carries a non-central concentrated load of 20kN acting at a distance of 3m from support B. Analyse the beam by matrix stiffness method. (El is constant). Draw the shear force and bending moment diagrams.
- 2 A portal frame of spans AB = 3m, BC = 4.5m and CD = 3m is subjected to a uniformly distributed load of 15kN/m over the entire span of BC. Analyse by matrix stiffness method and draw the bending moment diagram. MI of spans AB and CD : I and that of BC is 2I.

#### **Concept Map**

#### Syllabus

**ILD for indeterminate beams:** Muller Breslau's principle – Influence line diagrams for propped cantilever and continuous beams **Strain Energy Method:** Introduction – Castigliano's theorem of minimum strain energy – Analysis of propped cantilever and fixed beams, frames and trusses. **Theorem of Three Moments:** Clapeyron's theorem of three moments - Analysis of continuous beams. **Slope Deflection Method:** Derivation of slope deflection equation – Analysis of continuous beams. **Slope Deflection Method:** Derivation Stiffness – carry over factor – distribution factor - Analysis of continuous beams – Analysis of portal frames with and without side sway (single storey and single bay). **Matrix Methods:** Structure Stiffness Matrix – Analysis of continuous beams – Analysis of portal frames without side sway (single storey and single bay) by matrix stiffness method – Analysis of continuous beams by matrix flexibility method.

#### Ρ Credit 0 3

#### Preamble

This course aims at an experimental way of studying the fluid flow, which deals with measurement, design and behavior of flow in open channels. Further, it also involves Dimensional analysis, model testing and design of hydraulic machines at an optimum cost. Prerequisite

#### 18CE330

#### Course Outcomes

On the successful completion of the course students will be able to

| CO     | Course Outcome Statement   | Weightage*** |
|--------|--|--------------|
| Number |  | in %         |
| CO1    | Explain the various types of open channels and their flows   | 14           |
| CO2    | Design the various types of most efficient channel sections  | 22           |
| CO3    | Apply the principles of Dimensional Analysis and Model Analysis in hydraulic engineering problems. | 22           |
| CO4    | Compute the forces exerted by the jet of water on fixed and moving plates.                         | 8            |
| CO5    | Design and study the performance of various types of hydraulic turbines.                           | 16           |
| CO6    | Design and study the performance of various types of pumps.  | 16           |

#### Sample Questions for Course Outcome Assessment\*\*

#### Course Outcome 1(CO1):

- 1. What is an open channel flow?
- 2. Differentiate between steady and unsteady flow in a channel.
- 3. Why is a bed slope provided for an open channel?

#### Course Outcome 2(CO2):

- 1. A rectangular channel is 7m wide and 1.8m deep. If the bed of the channel is laid at a slope of 1in 6000, calculate the velocity of flow and discharge. Use Chezy's equation and assume C= 50
- 2. Determine the dimensions of the most economical trapezoidal earth-lined channel to carry  $15m^3$ /s at a slope of 1 in 2400. Apply Manning's equation and assume n = 0.020
- 3. The discharge of water through a rectangular channel of width 7m, is 16m<sup>3</sup>/s when the depth of flow of water is 1.2m, Calculate (i) Specific energy of the flowing water, (ii) critical depth and critical velocity and (iii) value of minimum specific energy.

### Course Outcome 3(CO3):

1. The frictional torque T of a disc of diameter D rotating at a speed N in a fluid of viscosity  $\mu$ and density p in a turbulent flow is given by

T =  $D^5 N^2 \rho \phi [\mu/D^2 N \rho]$  Prove this by the method of dimension.

- 2. The discharge Q of a centrifugal pump depends upon the mass density of the fluid p, the speed of the pump N, the diameter of the impeller D, the manometric head H, viscosity of the fluid µ and acceleration due to gravity g. Obtain an expression for Q, using Buckingham's  $\pi$  theorem.
- 3. A 7.0 m high and 10 m long spillway discharges 90 m<sup>3</sup>/s discharge under a head of 2m. If 1:10 scale model of this spillway is to be constructed, determine model dimensions, head over spillway model and the model discharge. If model experiences a force of 7200N, determine force on the prototype.

#### Course Outcome 4 (CO4):

- 1. Derive an expression for the force exerted by a jet of water on a fixed vertical plate in the direction of the jet.
- 2. A jet of water 50mm in a diameter, issues with a velocity of 10m/s and impinges on a stationary flat plate which destroys its forward motion. Calculate the force exerted by the jet on the plate and the work done.
- 3. A jet of water having velocity of 30m/s strikes a curved vane which is moving with a velocity of 15m/s. The jet makes an angle of  $30^{\circ}$  with the direction of motion of vane at inlet and leaves at an angle of  $120^{\circ}$  to the direction of motion at outlet. Draw the velocity triangles at inlet and outlet. Also calculate (i) van angles at inlet and outlet ( $\theta$ ,  $\Phi$ ) and (ii) work done per second on the vane by the jet.

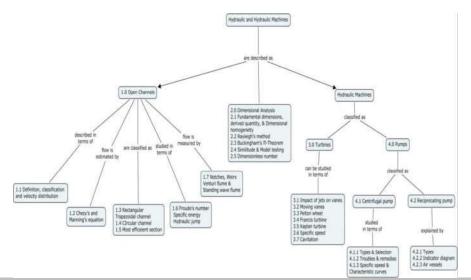

#### Course Outcome 5 (CO5):

- 1. Design a Pelton wheel for a head of 50m when running at 250 rpm. The Pelton wheel develops 90kW shaft power. The velocity of buckets =0.45 times the velocity of jet, overall efficiency is 85% and co-efficient velocity is 0.98
- 2. An inward radial flow reaction turbine works at 500rpm under a head of 100m. The diameter of turbine at inlet is 1.0m and flow area is 0.35m<sup>2</sup>. The angles made by absolute velocity and relative velocities at inlet are 15<sup>o</sup> and 60<sup>o</sup> respectively with the tangential velocity. Determine (i) Volume rate of flow, (ii) Power developed and (iii) Hydraulic efficiency of turbine.
- 3. A turbine is to operate under a head of 30m at 300 r.p.m. The discharge is 10m<sup>3</sup>/s. If the efficiency is 90% determine (i) Specific speed of the turbine, (ii) Power generated and (iii) type of the turbine.

# Course Outcome 6 (CO6):

- 1. Define slip of a reciprocating pump, at what condition the negative slip occur.
- 2. A centrifugal pump having outer diameter equal to two times the inner diameter and running at 1000 rpm, works against a total head of 40m. The velocity of flow through the impeller is constant and equal to 2.5 m/s. The vanes are curved back at an angle of 40° at outlet. If the outer diameter of the impeller is 600mm and width at outlet is 50mm, determine (i) Discharge through the pump, (ii) Vane angle at inlet ( $\theta$ ), (ii) Work done by impeller on water per second and (iii) Manometric efficiency.
- 3. The cylinder bore diameter of a single acting reciprocating pump is 200mm and its stroke is 400mm. The pump runs at 50 rpm and lifts water through a height of 25m. The delivery pipe is 22m long and 100mm in diameter. Find the theoretical discharge and theoretical power required to run the pump. If the actual discharge is 4.2 litres/s. Find the percentage of slip. Also determine the acceleration head at the beginning and middle of the delivery stroke.

#### Concept Map

#### Syllabus

**Open channel flow:** Definition, classification, and velocity distribution in open channels. Chezy's and Manning's equation. Flow through rectangular, Trapezoidal and Circular channels. Hydraulically most efficient channel section. Froude's number, Specific energy diagram, Hydraulic jump, Notches and Weirs. **Dimensional Analysis:** Fundamental dimensions and derived quantity, Dimensional homogeneity, Rayleigh's method and Buckingham's π-Theorem, Similitude, Model testing, Dimensionless number. **Impact of jets:** Impact of jets on fixed and moving vanes. **Water turbines:** Classification, Pelton wheel, Francis turbine, Kaplan turbine, specific speed and Cavitation. **Pumps:** Types of pumps, Selection of pumps, Troubles and remedies, Multistage pumps, Characteristics curves, Specific speed. Single and double acting reciprocating pump, Multi-cylinder pump, Indicator diagram, Slip and Air vessels.

#### Preamble

This course work aims at imparting the basic knowledge on various stages of works involved in planning, designing and execution of underground drainage system for a town/ city. This involves characteristics study on wastewater, estimation of wastewater and storm drainage generation, collection of wastewater, evolving a suitable treatment system to bring down the pollution level to acceptable limit and disposal of the treated wastewater on to land/ water bodies without endangering the environment.

#### **Course Outcomes**

On the successful completion of the course students will be able to

| CO     | Course Outcome Statement   | Weightage*** |
|--------|--|--------------|
| Number |  | in %         |
| CO1    | Characterize the wastewater generated from a town/ city  | 10           |
| CO2    | Estimate the quantity of wastewater and storm run-off generated from the town/ city  | 15           |
| CO3    | Design a suitable collection system for the generated wastewater   | 15           |
| CO4    | Identify the sewer appurtenances needed for the smooth functioning of the sewerage and to perform the required maintenance operations involved in the system | 15           |
| CO5    | Design the necessary treatment units for the wastewater collected from the town/city   | 25           |
| CO6    | Identify the suitable mode of disposal for the treated wastewater without endangering the environment.   | 20           |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

| Adaptation              | -   |
| Origination             | -   |

#### Sample Questions for Course Outcome Assessment\*\* Course Outcome1(CO1):

- 1. What is Population equivalent?
- The 7 days 20°C BOD of a sample of sewage is 300mg/L and its 3days 20°C BOD is 210mg/L. find out the value of de-oxygenation constant k and then estimate its 5 days 30°C BOD.
- 3. The sewage discharge of a city is 85m3/s in the river having a minimum discharge of 930 l/s with a velocity of 0.12m/s. the BOD at 20°C of the sewage is 325mg/L. the BOD of the river is zero. Determine the quantity and point of critical DO deficit.

#### Course Outcome 2(CO2):

- 1. A district consists of 20% of area with runoff coefficient 0.9,20% of area with runoff coefficient 0.85,5% of area with 0.80,15% of area with 0.40 runoff coefficient, 35% of area with runoff coefficient 0.10 and remaining area with runoff efficient 0.05; determine the co-efficient of runoff for the area. If the total area of the district is 36 hectares and the maximum rain intensity is taken as 5cm/hr; what is the total runoff for the district? If the density of population is 250 per hectare and the rate of water supply is 200lit/day/capita. Calculate the quantity of sewage for which the sewer of a separate system is to be designed.
- 4. A 30cm diameter sewer having an invert slope of 1 in 150 was flowing full. What would be the velocity of flow and discharge? N=0.013. Is the velocity self-cleansing? What would be the velocity and discharge when the same is flowing at 0.20 and 0.80 of the full depth.
- 5. Suggest a suitable sewage collection system for a town with a population of 5.0 Lakhs. This town is very old with narrow lay- out of roads and streets.
- 6. With a help of a neat sketch, propose a wastewater collection system for a house with 2 bed rooms, 1 Hall, 1 sit-out, 1 kitchen etc.

#### Course Outcome3(CO3):

1. Discuss the role of velocity of flow in hydraulic design of sewers

- 2. Justify the usage of various sewer appurtenances for the efficient performance of sewerage.
- 3. Justify the usage of circular shaped sewers than other sections.
- 4. Design a grit chamber system for a town with a population of 1.0 Lakh. Assume necessary design parameters appropriately.

#### Course Outcome 4 (CO4):

1. Design a standard rate trickling filter for the following:

Average incoming flow=350m3/hr

- BOD of primary effluent=210mg/L
- No of units=4

Make suitable assumptions for any missing data.

- A sedimentation tank treating 4.5 million liters of sewage per day containing 275mg/L of suspended solids. The tank removes 50% suspended solids. Calculate the quantity of sludge produced per day in volume basis & weight basis, if (i) moisture content is 98% (ii) moisture content is 96%
- 3. Why do we go for anaerobic treatment of sewage? Analyze the performance of different anaerobic treatment system?
- 4. A city with a population of 2.0 Lakhs is to be provided with a secondary treatment facility. Suggest a treatment system and make a complete design.

#### Course Outcome 5 (CO5):

1. Design a septic tank for the following data:

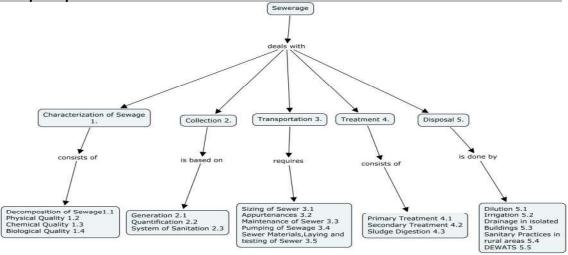

No of people=100 Sewage/capita/day=120L Desludging period=1yr L:B=4:1

- 2. Design a septic tank unit for a housing colony with 100 persons. Also design the suitable effluent percolation unit.
- 3. Suggest a disposal system for a town where the water scarcity is very high.

### Course Outcome 6(CO6):

- 1. Explain in detail about various methods of safe disposal of sewage.
- 2. Describe discharge standards for the municipal wastewater either inland or in water bodies.

#### Concept Map

#### Syllabus

**Characteristics of sewage** - decomposition – aerobic and anaerobic decomposition, physical and chemical quality of sewage, BOD and their testing, BOD equation and problems, population equivalent. **Collection of Sewage** - Systems of sanitation, Estimating quantity of sewage, dry

weather flow, estimating storm run-off by rational formula. **Transportation of Wastewater** – Sewerage - separate, combined and partially separate system, hydraulic design of sewers, Sewer materials, laying and testing of sewer, sewer appurtenances, cleaning and ventilation of sewars, pumping of sewage. **Treatment of Wastewater** - Physico-chemical treatment of sewage, Biological treatment of sewage, aerobic treatment, activated sludge process and its mechanism, design parameters and design, modifications in ASP, Introduction to SBR and MBR, Trickling filters, process mechanism, types, design parameters and design, Hybrid system –MBBR (basics only), Natural systems, Ponds and Lagoons, Anaerobic systems – UASB, anaerobic filters and natural systems. **Impact of disposal of sewage** – Sludge characteristics, digestion tanks, design, disposal of digested sludge, Impact of disposal of treated sewage, Impact on river, self-purification, oxygen sag curve, streeter-phelps equation, Impacton lakes, Eutrophication, Impact on sea, Land irrigation, sewage farming, sewage sickness, Recycling of treated sewage, Disposal of sewage in isolated buildings, plumbing system – types; Sanitary practices in rural areas, ECOSAN, Water less urinals, Bio-toilets, Introduction to DEWATS.

# Preamble

This course helps the students to achieve effective language proficiency for their professional, social and interpersonal communication skills, hence increasing their employability and career skills.

#### Prerequisite

Basic English Knowledge

#### **Course Outcomes**

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Listen, watch, understand and respond to talks, conversations, etc by native and neutral speakers on science, general context, and from ETS test samples with confidence.   |                      |
| CO2          | Present ideas, express opinions/comments, practice presentation, and converse in discussions on a variety of technical and non-technical domains without fear   |                      |
| CO3          | Read and comprehend passages/texts from various topics – general<br>and reasoning, to respond precisely through reading techniques,<br>besides getting awareness on competitive exam lexicon/verbal<br>exercises for career prospects | 17%                  |
| CO4          | Write journal abstracts/projects and business correspondences with clarity, accuracy, intelligibility, and precision.   | 22%                  |

\*\*\* Weightage depends on Bloom's Level, number of contact hours

PROGRAMMING AND CODING LAB

| Category | L | Т | Ρ | Credit |
|----------|---|---|---|--------|
| ES       | 0 | 0 | 2 | 1      |

# Preamble

The laboratory course is designed to enable the students to solve simple mathematical, numerical and engineering problems and provide solutions using C programming language. The list of experiments starts with implementation of fundamental concepts, various control structures, array handling methods, string manipulations, use of functions, structures and files in C programming language. Then, the concepts learnt are applied by taking case studies in the appropriate engineering domain. These experiments will strengthen the concepts learnt in the corresponding theory course.

#### Prerequisite

18CE350 : Programming for Problem solving

#### Course Outcomes

On the successful completion of the course, students will be able to

| CO<br>Number | Course Outcome Statement   | Weightage<br>in % |
|--------------|--|-------------------|
| CO1          | Demonstrate the working of fundamental algorithms using data types, constants and expressions in C language      | 10                |
| CO2          | Illustrate different control structures in C for solving the<br>simple mathematical and engineering problems     | 10                |
| CO3          | Make use of array processing techniques to perform matrix manipulations.   | 15                |
| CO4          | Solve problems related to string manipulations, sorting and searching using functions or recursion as applicable | 30                |
| CO5          | Write programs in C using files and structures to store, retrieve and process data                               | 10                |
| CO6          | Experiment the case studies in civil engineering domain and solve using C programs                               | 25                |

# List of Experiments/Activities with CO Mapping

| Experiments   | CO  |
|---|-----|
| Write C programs using fundamental algorithms   | CO1 |
| Calculating simple Interest   |     |
| <ul> <li>converting the temperature from Celsius to Fahrenheit</li> </ul>               |     |
| Area and perimeter of rectangle   |     |
| Write C programs using selection and repetition control structures                      | CO2 |
| Simple Arithmetic Calculator  |     |
| Grade Computation   |     |
| Biggest of three numbers  |     |
| Sum of set of numbers   |     |
| Generating sine series  |     |
| Write C programs for array handling   | CO3 |
| Maximum/ Minimum element in an array  |     |
| <ul> <li>Read n number of values in an array and display it in reverse order</li> </ul> |     |
| Copy elements of one array to another array   |     |
| Write C programs for matrix manipulations   | CO3 |
| Matrix Addition, Subtraction and Multiplication   |     |
| Write C programs using functions  | CO4 |
| <ul> <li>Swap of two numbers using call by value and call by reference</li> </ul>       |     |
| Find GCD using function   |     |
| Develop C programs using recursion  | CO4 |
| Fibonacci Series  |     |
| Factorial Computation   |     |

| <ul> <li>Develop C programs for string manipulations</li> <li>Implement string operations such as string concatenation, copy, length</li> </ul> |     |  |  |  |  |  |
|---|-----|--|--|--|--|--|
| Write C programs to implement different sorting and sorting methods   | CO4 |  |  |  |  |  |
| Linear Search   |     |  |  |  |  |  |
| Bubble sort   |     |  |  |  |  |  |
| Develop C programs using structures and files   |     |  |  |  |  |  |
| Storage, Retrieval and Processing of student data   |     |  |  |  |  |  |
| Read and Write operations on text files   |     |  |  |  |  |  |
| Implementation of any two case studies related to civil engineering using C programs  |     |  |  |  |  |  |

|         | LAB                           | PC       | 0 | 0 | 2 | 1      |

#### Preamble

This laboratory is used in conjunction with Fluid Mechanics course in reinforcing the fundamentals of fluid mechanics and machinery by hands on experiment.

Prerequisite 18CE330

# Course Outcomes

On the successful completion of the course students will be able to

| CO     | Course Outcome Statement   | Weightage*** |
|--------|--|--------------|
| Number |  | in %         |
| CO1    | Measure the rate of flow in pipe section as well as open channel sections. | 33           |
| CO2    | Apply the Bernoulli's theorem in real world problems.                      | 8            |
| CO3    | Calculate the major and minor losses in closed conduits                    | 17           |
| CO4    | Explain the performance of hydraulic machines such as turbines and pumps.  | 42           |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

# **Assessment Pattern: Cognitive Domain**

#### Assessment Pattern: Psychomotor

| Psychomotor Skill       | Assignment |
|-------------------------|------------|
| Perception              | -          |
| Set                     | 20         |
| Guided Response         | 30         |
| Mechanism               | 50         |
| Complex Overt Responses | -          |
| Adaptation              | -          |
| Origination             | -          |

# Sample Questions for Course Outcome Assessment

#### Course Outcome 1(CO1):

- 1. Define project and project management. Mention its need
- 2. Discuss the functions of project management
- 3. Discuss the life cycle of projects with influencing factors

#### Course Outcome 2(CO2):

- 1. Differentiate between CPM and PERT
- 2. A project consists of six activities with the following logical relationships. Draw a network for the project and determine the critical path using traditional method
- A and B are initial activities and can be performed concurrently
- C follows A but cannot start until B is over
- D and E succeed B
- C and D precede F
- E and F are terminal activities

| Activity        | А | В | С | D | E | F |
|-----------------|---|---|---|---|---|---|
| Duration (Days) | 7 | 8 | 3 | 2 | 7 | 4 |

3. Find the status of the project on the 10<sup>th</sup> day of its commencement.

Conduct Event oriented network analysis for the following project and determine:

- Earliest and latest allowable occurrence times for the events
- Expected time and standard deviations for activities
- Project completion time and its degree of variability
- What is the probability of completing the project 2 days ahead of schedule?
- What is the probability of not completing the project 1 day behind schedule?
- Find the due date that has 75% chance of being met?

|                     |     |     |     | being met. |     |     |     |
|---------------------|-----|-----|-----|------------|-----|-----|-----|
| Activity (i-j)      | 1-2 | 1-3 | 2-4 | 3-4        | 3-5 | 4-5 | 5-6 |
| t₀ days             | 2   | 3   | 4   | 0          | 7   | 2   | 4   |
| t <sub>m</sub> days | 3   | 3   | 10  | 0          | 12  | 7   | 6   |
| t <sub>p</sub> days | 5   | 3   | 12  | 0          | 15  | 9   | 8   |

# Course Outcome 3 (CO3):

1. Prepare the need for balancing of resources in project? Mention its significance

- 2. For an automobile industry project you as a project manager are vested with the responsibility of balancing manpower requirement, which method would you adopt for this process. Justify your answer with suitable reasons.
- 3. Balance the resource demand for the following project so as to meet the availability of only 7 men/day

| Activity (i-j)  | 0-1 | 0-3 | 0-6 | 1-2 | 3-4 | 3-7 | 6-7 | 2-5 | 4-5 | 7-8 | 5-8 |
|-----------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| Duration (days) | 2   | 2   | 1   | 4   | 5   | 8   | 3   | 1   | 4   | 5   | 3   |
| Manpower        | 3   | 6   | 4   | 2   | 2   | 4   | 5   | 4   | 2   | 2   | 5   |

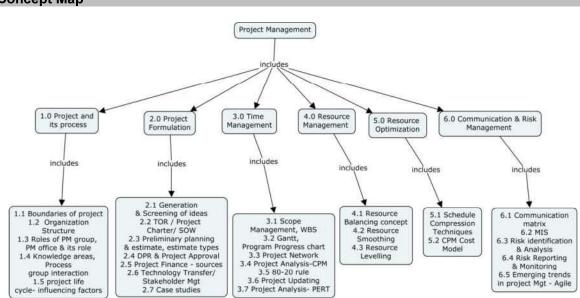

#### Course Outcome 4 (CO4):

- 1. Define the term direct cost in projects with examples
- 2. Prepare the need and meaning of fast tracking and estimation of projects
- 3. A project consists of 7 activities with costs and times gives as shown in table. Crash the project and determine the optimum time and minimum cost relationship for the project. Assume the indirect cost to vary at Rs.500/- per day.

| Activity (i-j)   | 1-2 | 1-3 | 2-4 | 3-4 | 3-5 | 4-5 | 5-6 |
|------------------|-----|-----|-----|-----|-----|-----|-----|
| Normal time days | 5   | 7   | 4   | 2   | 5   | 3   | 4   |
| Crash time days  | 3   | 4   | 2   | 1   | 3   | 2   | 1   |
| Normal cost Rs.  | 500 | 100 | 200 | 400 | 350 | 380 | 50  |
| Crash cost Rs.   | 800 | 300 | 500 | 750 | 800 | 900 | 150 |

#### Course Outcome 5(CO5):

- Conduct EVA for a project having a Budget at Completion as Rs. 100 lakhs and estimated duration of completion as 5 years. The status of the project by the end of 2.5 years is as follows: PV = Rs. 60 lakhs, EV = Rs. 52.5 lakhs and CV = Rs. 70 lakhs. Determine CV, SV, CPI, SPI, EAC, ETC, Final Cost, Final Schedule and TCPI for the project
- 2. Discuss why effective communication is needed for the success of any projects taking an example
- 3. Take of project of your choice in a mechanical industry and list and discuss the risks in the project along with possible methods of its mitigation.

#### **Concept Map**

#### Syllabus

Project and its process- Define project and process, Objectives and functions of Project management, organization structure / styles, roles of project management group, project integration, project life cycle- influencing factors. - Case study. Project Formulation: Generation and Screening of PM ideas- Triple Constrain, TOR/ Project Charter/ SOW - Creation of project Charter. Preliminary planning and Types of estimate. Project Presentation & Approval – Detailed Project Report & Approval, Project finance, Technology transfer- PPP Concepts, Stakeholder Management - Case study. Time Management: Project Scope Management - Work break down structure. Project planning tools- Project Network- Fulkerson's rules - Activity-On-Arrow and Activity-On-Node networks. Analyze project time- Critical path method - 80-20 rule- Square network diagram. Introduction to project management software. Project updating and monitoring- Case study\*\* Estimate time- Program Evaluation & Review Technique. Resource Management: Types of resource- Balancing of resource- Resource Smoothing technique-Resource leveling technique- - Case study. Resource optimization: Types of cost - Variation of Cost with time. Schedule Compression Techniques- Crash time and crash cost. Optimize project cost. CPM Cost model. Communication Management: Communication Managementcommunication matrix Case study, Management information system, Guidelines of meeting-Case study. Risk Management: Risk management - meaning and process. Risk identification and analysis techniques- FMEA and SWOT analysis, Risk reporting and monitoring- Case study. Emerging trends in project management : Introduction to Theory of Constraints, Earned Value Management Agile Project management - Case study.

#### Preamble

Concrete Technology focuses more on detailed understanding of concrete making materials and production process. Recent developments in concrete materials are also given adequate consideration. Going through the course, student would develop adequate understanding on concrete production process and properties and uses of concrete as a modern material of construction. The course will also enable the student to make appropriate decision regarding ingredient selection and use of concrete.

#### Course Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement   | Weightage***<br>in % |
|--------------|--|----------------------|
| CO1          | Explain the properties and tests of various constituents present in concrete                                 | 25                   |
| CO2          | Demonstrate various manufacturing process of concrete and properties and workability tests of fresh concrete | 15                   |
| CO3          | Design concrete mix as per IS and ACI standards  | 15                   |
| CO4          | Enumerate the mechanical behaviour and properties of hardened concrete                                       | 15                   |
| CO5          | Demonstrate the long term properties of concrete and identify the solutions for field problems               | 15                   |
| CO6          | Select the suitable type of special concrete for real time situations  | 15                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

#### **Assessment Pattern: Psychomotor**

| Psychomotor Skill       | Miniproject /Assignment/Practical Component |
|-------------------------|---|
| Perception              | -   |
| Set                     | -   |
| Guided Response         | 50  |
| Mechanism               | 50  |
| Complex Overt Responses | -   |
| Adaptation              | -   |
| Origination             | -   |

#### **Course Level Assessment Questions**

#### Course Outcome 1 (CO1):

- 1. Differentiate admixtures and additives.
- 2. Define specific gravity and bulk density.
- 3. Explain the process of hydration of cement.

#### Course Outcome 2 (CO2):

- 1. Explain the various factors influencing the workability of concrete.
- 2. Suggest suitable type of compaction for
  - Placing of beams and columns
    - Road construction work
    - Precast slab construction
- 3. Suggest suitable type of curing for the following structural components
  - Roof slab
  - Masonry walls
  - Pre-stressed concrete sleepers

### Course Outcome 3 (CO3):

- 1. Arrive suitable concrete mix for M40 concrete for the following concrete.
- i. Characteristic strength on concrete at 28 days : 40N/mm<sup>2</sup>
  - ii. Ordinary Portland Cement of 53 grade
  - iii. Degree of Workabilityiv. Degree of Exposure

- : 75 100 mm slump
- v. Maximum size of Aggregate
- : Mild
- : 20 mm

| vi.   | Specific Gravity of Coarse Aggregate | : 2.75  |
|-------|--------------------------------------|---------|
| vii.  | Specific Gravity of Coarse Aggregate | : 2.63  |
| viii. | Specific Gravity of Cement           | : 3.05  |
| ix.   | Degree of Quality control            | : Good. |
|       |                                      |         |

#### 2. Design a suitable concrete mix with the following particulars using IS 10262-1982.

- x. Characteristic strength on concrete at 28 days : 20N/mm<sup>2</sup> xi. Ordinary Portland Cement of 53 grade
- xii. Degree of Workability : 50-75 mm slump xiii. Degree of Exposure : Mild xiv. Maximum size of Aggregate : 20 mm xv. Specific Gravity of Coarse Aggregate : 2.7 xvi. Specific Gravity of Coarse Aggregate : 2.6 xvii. Specific Gravity of Cement : 3.15 : Good.
- xviii. Degree of Quality control
- 3. Construct the step by step procedure of concrete mix design as per ACI method

#### Course Outcome 4 (CO4):

- 1. Suggest suitable solutions to the following problems in concrete and RCC members and justify it.
  - Freezing and thawing effect on concrete
  - Shrinkage in concrete
  - Acid attack in concrete
- 2. Construct the procedure to determine the tensile strength of concrete.
- 3. Discuss the various types of non destructive testing methods.

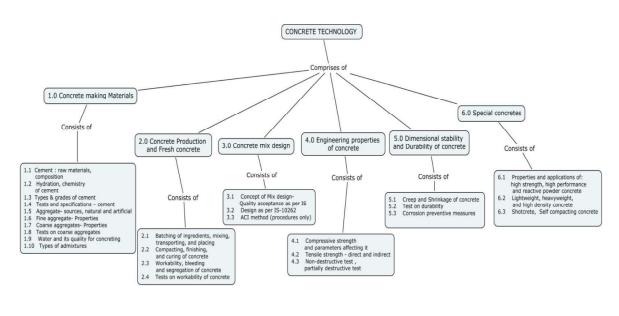

#### Course Outcome 5 (CO5):

- 1. Select suitable type of protective measures may apply on rebars against corrosion.
- 2. A RCC structure is to be constructed in a marine environment. Discuss the various preventive measures you would recommend to make the structure safe against corrosion of rebars.
- 3. How to overcome the following effects on structures? i. Corrosion effect on steel rods.
- ii. Resistance to chloride and sulphate reactions. iii. Alkali aggregate reaction.

Course Outcome 6 (CO6):

- 1. Choose the suitable special concrete that can be used for the following situations and explain briefly.
  - a. To reduce the self weight of the structure.
  - b. To enhance the tensile strength of concrete.
  - c. Shuttering and formwork is not possible.
- 2. Differentiate light weight and heavy weight concrete.
- 3. Choose the suitable type of concrete for congested reinforced area.

#### Syllabus

#### Concrete making Materials:

Cement: Raw materials; composition - Hydration, chemistry of cement; Types, Tests and specifications- Consistency, setting time, soundness and fineness test. Aggregates:Sourcenatural and artificial.Fine aggregates:River sand & MSand :physical properties-Gradation, fineness modulus, specific gravity, bulk density, bulking of sand, water absorption, moisture content, presence of deleterious content. Coarse aggregates: Size and shape, gradation, fineness modulus, specific gravity, bulk density sieve analysis, water absorption. Tests on coarse aggregates- impact, crushing, abrasion and attrition, alkali aggregate reaction. Water: Qualities of water for concreting- tolerable concentrations of impurities, sea water and its effects. Concrete Production & Fresh concrete: Batching of ingredients; mixing, transporting, and placing - Compacting, finishing, and curing of concrete - Workability, bleeding and segregation of concrete - Factors influencing it - Tests on workability of concrete. Admixtures: Types of Admixtures- super plasticisers, plasticisers, retarders, accelerators, air entrained admixtures and pozzolanic admixtures Concrete mix design: Concept of Mix design-Quality acceptance criteria as per Indian standard method. Design of concrete mixes as per IS-10262, ACI method (procedure only). Engineering properties of concrete: Compressive strength and parameters affecting it - Tensile strength - direct and indirect; Modulus of elasticity and Poisson's ratio, flexural strength of concrete- Non-destructive test, partially destructive test. Dimensional stability and Durability of concrete: Creep - parameters affecting - Shrinkage of concrete types and its significance; Introduction to durability; relation between durability and permeability - Chemical attacks on concrete- sulphate attack, chloride, acid attacks, sea water attacks, carbonation attacks - Corrosion of steel rebars, corrosion preventive measures. Special concretes: Properties and applications of: high strength, high performance and reactive powder concrete - Lightweight, heavyweight, and high density concrete, Concrete, Self compacting concrete and Geo polymer concrete.

# Preamble

This course deals with the application of laws of Mechanics and Hydraulics to solve engineering problems related with soils like flow of water through soil, Shear strength, Compressibility & Compaction characteristics of soil, Stress distributionin soil and analyzing the stability of earthen slopes.

#### Prerequisite

18CE230 - Engineering Mechanics

#### Course Outcomes

| On the successful completion of the course students will be able to |   |              |  |  |  |  |  |  |
|---|---|--------------|--|--|--|--|--|--|
| CO  | Course Outcome Statement  | Weightage*** |  |  |  |  |  |  |
| Number  |   | in %         |  |  |  |  |  |  |
| CO1   | Identify various types of soil, classify them and compute their index properties.                                   | 20           |  |  |  |  |  |  |
| CO2   | Understand the flow of water through soil medium and calculate the permeability of cohesive and cohesionless soils. | 15           |  |  |  |  |  |  |
| CO3   | Calculate effective stress within soils and compute stresses in soil due to external loads.                         | 15           |  |  |  |  |  |  |
| CO4   | Compute the shear strength of soils based on the parameters obtained from shear tests.                              | 20           |  |  |  |  |  |  |
| CO5   | Understand the concept of consolidation and estimate the settlement of soil due to consolidation.                   | 15           |  |  |  |  |  |  |
| CO6   | Illustrate the significance of soil compaction and analyse stability of earth slopes                                | 15           |  |  |  |  |  |  |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

|-------------------------|--|
| Perception              | -  |
| Set                     | -  |
| Guided Response         | 60   |
| Mechanism               | 40   |
| Complex Overt Responses | -  |
| Adaptation              | -  |
| Origination             | -  |

### Sample Questions for Course Outcome Assessment\*\*

### Course Outcome1(CO1):

- 1. Distinguish between Index and Engineering properties.
- 2. The following data relate to 5 fine grained soil samples.

| L.L (%) | 25 | 45 | 50 | 60 | 80 |
|---------|----|----|----|----|----|
| P.L (%) | 15 | 23 | 25 | 35 | 36 |

3. A soil in the borrow pit is at a dry density of 16.5 kN/m<sup>3</sup> with a moisture content of 9%. The soil is excavated from this pit and compacted in an embankment to a dry density of 18 kN/m<sup>3</sup> with a moisture content of 13%. Compute the quantity of soil to be excavated from the borrow pit and the amount of water to be added for 100 m<sup>3</sup> of compacted soil in the embankment.

### Course Outcome2(CO2):

- 1. List out the factors affecting permeability of soil.
- A constant head permeability test was carried out on a cylindrical sample of sand 10cm diameter and 15cm height. 200 cc of water is collected in 2 mins under a head of 30cm. Compute the coefficient of permeability in m/year. Also calculate the discharge velocity and seepage velocity if void ratio of the sample is 0.75.

3. There is a three layered soil deposit. The thickness of the second layer is twice the thickness of the first and the thickness of the third layer is thrice the thickness of the first. The permeability of the second layer is twice the permeability of the first and the permeability of the third layer is half the permeability of the first. Compute the ratio of average permeability of the deposit in horizontal direction to that in the vertical direction.

### Course Outcome3(CO3):

- 1. Explain Quick sand condition in soil.
- 2. Water table is lowered from a depth of 3m to a depth of 6m in a deposit of silt. The silt deposit has a water content of 20%. Its degree of saturation above water table is 65%. Estimate the increase in effective stress at a depth of 10m due to lowering of the water table. Assume G=2.7.
- 3. A square footing 2m x 2m resting on the surface of a soil exerts a pressure of 150kN/m<sup>2</sup>. Determine the stress at a point which is at a depth of 5m below the centre of the footing using Boussinesq's theory.

### Course Outcome 4 (CO4):

- 1. Explain Mohr-Coulomb failure criterion.
- 2. Consolidated Undrainedtriaxial tests are performed on two identical specimens of saturated, remoulded clay with pore pressure measurements. The observations are recorded in the table below

| Test | Cell pressure at failure | Deviator stress at failure | Pore pressure at failure |
|------|--------------------------|----------------------------|--------------------------|
| No.  | (kN/m²)                  | (kN/m²)                    | (kN/m²)                  |
| 1.   | 250                      | 179                        | 101                      |
| 2.   | 350                      | 242                        | 145                      |

Determine the values of the shear strength parameters in terms of total and effective stresses. If in the consolidated undrained test, an identical specimen is first consolidated under a cell pressure of  $400 \text{ kN/m}^2$ , what would be the deviator stress at failure?

3. Borings at a site show the following subsurface condition:

| <u>Depths</u> | <u>Material</u> | <u>Properties</u>                            |
|---------------|-----------------|--|
| 0 to 2m       | Silt            | ρ = 1.44 gm/cc                               |
| 2m to 12m     | Sand            | $\rho_{sat}$ = 1.9 gm/cc                     |
| 12m to 18m    | clay            | ρ <sub>sat</sub> = 1.78 gm/cc,               |
|               |                 | C = 20kN/m <sup>2</sup> , Ø= 18 <sup>0</sup> |

Ground water table is at a depth of 2m below the ground surface. Estimate the shear strength along a plane at a depth of 16m below the ground surface.

# Course Outcome 5 (CO5):

- 1. Explain the procedure for determining Coefficient of Consolidation by  $\sqrt{t}$  method.
- A 3m thick clay layer beneath a building is overlain by a permeable stratum and is underlain by an impervious rock. The coefficient of consolidation of the clay was found to be 0.028cm<sup>2</sup>/min. The final expected settlement for the layer is 8cm.
  - i) How much time will it take for 60% of total settlement to take place?
  - ii) Determine the time required for a settlement of 3.5cm.
    - iii) What will be the settlement in 8 months?
- 3. In an Oedometer test 2 cm thick sample of clay reached 40% consolidation in 5minutes.What will be the time required for a clay layer 4m thick in field to reach the same degree of

consolidation? Sample and the clay layer in field have same drainage conditions (double drainage).

# Course Outcome 6(CO6):

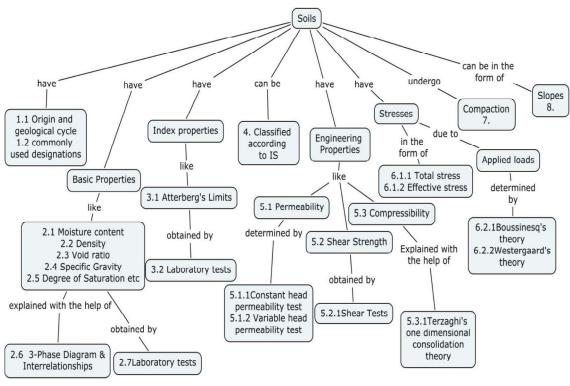

- 1. Calculate the compaction energy in Light and Heavy compaction tests.
- 2. Following are the results of Standard Proctor Compaction test performed on a soil sample:

| Water<br>Content (%)    | 5    | 10   | 14  | 20   | 25   |
|-------------------------|------|------|-----|------|------|
| Bulk density<br>(g/c.c) | 1.77 | 1.98 | 2.1 | 2.18 | 2.16 |

Plot the water content – dry density curve and obtain the optimum moisture content and maximum dry density. Calculate the water content necessary to completely saturate the sample at its maximum dry density, assuming no change in the volume. Take G = 2.7.

An embankment is inclined at an angle of 35<sup>0</sup> and its height is 12m. The angle of shearing resistance is 17<sup>0</sup> and the cohesion is 200kN/m<sup>2</sup>. The unit weight of the soil is 18 kN/m<sup>3</sup>. If the Taylor's stability number is 0.06, find the factor of safety with respect to cohesion.

### **Concept Map**

# Syllabus

**Origin and Properties of soils:** Formation of soil - Commonly used soil designations -Phase relationships – Index Properties - Laboratory tests – Particle size distribution analysis - Determination of consistency limits and their significance to the field behaviour of soil - BIS Soil classification system. **Permeability:** Darcy's law and its validity - Determination of permeability in laboratory - Factors affecting permeability - Seepage analysis – Laplace's equation – Introduction to Flow nets. **Geostatic Stress and Stress distribution in soil:** Concept of total and effective stress in saturated soils deposits - Quick sand condition – Stresses due to external

loads - Boussinesq's theory (Point load, UDL and Line Load) - Concept of pressure bulb - Approximate methods – Use of Newmark's influence chart. **Shear Strength:** Shear strength of cohesive and cohesionless soils - Mohr-Coulomb failure criterion - Classification of shear test based on drainage conditions - Direct shear test - Unconfined compression test – Triaxial compression test - Vane shear test - Liquefaction. **Compressibility:** Concept of consolidation - Terzaghi's theory of one dimensional consolidation – Components of settlement - Computation of rate of settlement – Determination of  $C_v$  by  $\sqrt{t}$  method and log time method - Calculation of consolidation settlement – Precompression with sand drains. **Soil Compaction:** Concept of compaction for compaction – Standard proctor and Modified proctor compaction Tests – Factors affecting compaction – Field compaction methods and machineries. **Stability of Slopes:** Types of slope failures – Different factors of safety – Stability analysis of Infinite and finite slopes – Taylor's stability number – Stability analysis by method of slices and "Øu=0" analysis – Slope stabilization methods

| No.       |  | Hours  | Outcome |
| 1.        | Origin and Properties of soils                           |        |         |
| 1.1       | Formation of soil – Commonly used soil designations      | 1      |         |
| 1.2       | Phase relationships–Index properties                     | 1      |         |
| 1.3       | Laboratory tests   | 1      |         |
| 1.4       | Particle size distribution analysis                      | 2      | CO1     |
| 1.5       | Determination of consistency limits and their            | 2      |         |
|           | significance to the field behaviour of soil              |        |         |
| 1.6       | BIS soil classification system                           | 2      |         |
| 2.        | Permeability   |        |         |
| 2.1       | Darcy's law and its validity – Determination of          | 2      |         |
|           | permeability in laboratory                               |        |         |
| 2.2       | Factors affecting permeability – Seepage analysis –      | 2      | CO2     |
|           | Laplace's equation                                       |        |         |
| 2.3       | Introduction to Flow Nets                                | 1      |         |
| 3.        | Geostatic Stress and Stress distribution in soil         |        |         |
| 3.1       | Concept of total and effective stress in saturated soils | 2      |         |
|           | deposits – Quick sand condition                          |        |         |
| 3.2       | Stresses due to external loads – Boussinesq's theory     | 2      | СОЗ     |
|           | (Point load, UDL and Line Load)                          |        |         |
| 3.3       | Concept of Pressure bulb – Approximate methods –         | 1      |         |
|           | Use of Newmark's influence chart                         |        |         |
| 4.        | Shear Strength   |        |         |
| 4.1       | Shear strength of cohesive and cohesionless soils –      | 2      | CO4     |

# **Course Contents and Lecture Schedule**

|     | Mohr-Coulomb failure criterion – Classification of  |    |       |  |  |  |
|-----|---|----|-------|--|--|--|
|     |   |    |       |  |  |  |
| 4.2 | shear test based on drainage conditions           Direct shear test – Unconfined compression test           | 2  | -     |  |  |  |
| 4.3 | Triaxial compression test – Vane shear test –   | 2  | -     |  |  |  |
| 4.5 | Liquefaction  | 2  |       |  |  |  |
| 5.  | Compressibility   |    |       |  |  |  |
| 5.1 | Concept of consolidation – Terzaghi's theory of one dimensional consolidation                               | 1  |       |  |  |  |
| 5.2 | Components of settlement – Computation of rate of settlement  | 1  | CO5   |  |  |  |
| 5.3 | Determination of $C_v$ by $\sqrt{t}$ method and log time2method – Calculation of consolidation settlement   |    |       |  |  |  |
| 5.4 | Precompression with sand drains   | 1  | 1     |  |  |  |
| 6.  | Soil Compaction   |    |       |  |  |  |
| 6.1 | Concept of compaction - Standard proctor and<br>Modified proctor compaction Tests                           | 2  | 000   |  |  |  |
| 6.2 | Factors affecting compaction - Field compaction methods and machineries                                     | 2  | - CO6 |  |  |  |
| 7.  | Stability of Slopes   |    |       |  |  |  |
| 7.1 | Types of slope failures - Different factors of safety -<br>Stability analysis of infinite and finite slopes | 2  |       |  |  |  |
| 7.2 | Taylor's stability number - Stability analysis by method of slices and "Ø <sub>u</sub> =0" analysis         | 1  | CO6   |  |  |  |
| 7.3 | Slope stabilization methods   | 1  | 1     |  |  |  |
|     | Total Hours   | 36 |       |  |  |  |

| HSS      | 3 | - | I | 3      |

### Preamble

Engineering profession involves lots of decision making. The decisions may range from operation to non-operation. For taking decisions of these kinds, an engineer needs among other data about the organization routine operations and non-routine operations. Accounting is a science which provides all the data by recording, classifying, summarizing and interpreting the various transactions taking place in an organization and thereby helps an engineer in taking vital decisions in an effective manner. Finance is an allied but a separate field relying on accounting and enables engineers in taking useful financial and cost related decisions by providing well defined concepts, tools and techniques

# Course Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Prepare financial statements of accounting and study them with common size statements and comparative statements.                     | 20                   |
| CO2          | Perform cost sheet, depreciation and its applications in business.  | 15                   |
| CO3          | Compute various types of budgets in an organization   | 15                   |
| CO4          | Practice break even analysis and activity based costing systems for a business applications   | 15                   |
| CO5          | Compute working capital requirements and long term investment decisions.  | 20                   |
| CO6          | Apply the appropriate sources of finance and mobilize the right quantum of finance and use them in most profitable investment avenues | 15                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

# Course Outcome 3(CO3):

- 1. Explain the advantages and applications of budgetary control.
- 2. From the forecast of income and expenditure prepare a cash budget for the months from April to June 2019.

|        | Purchases                            | Wages   | Office  | Selling  |   |
|--------|--------------------------------------|---|---|--|---|
| Rs     | Rs                                   | Rs  | expenses  | expenses   |   |
|        |                                      |   | Rs  | Rs   |   |
| 70,000 | 45,000                               | 4,500   | 2,700   | 1,800  |   |
| 72,000 | 43,000                               | 4,700   | 3,000   | 2,000  |   |
| 75,000 | 44,000                               | 4,900   | 2,900   | 2,200  |   |
| 71,000 | 40,000                               | 5,000   | 3,000   | 2,100  | <ul> <li>Plant</li> </ul>   |

worth Rs25.

000 purchased in June. 40% payable immediately and the remaining in two equal instalments in subsequent months.

- Advance tax payable in April Rs 4500
- Period of credit allowed
  - By suppliers 2 months
  - To customer 1 month
- Dividend payable Rs 7000 in June
- Delay in payment of wages and office expenses 1 month and selling expenses 0 1 month. Expected cash balance on 1<sup>st</sup> April Rs 30,000

Machinery expected to sell on May is Rs 20,000

### Course Outcome 4 (CO4):

- 1. From the following information calculate the Breakeven point in terms of units and breakeven point in terms of sales. Sales....Rs.10,000, Variable costs Rs.6,000, fixed costs Rs.2000: profit Rs.2,000;No. Of units produced 1,000 units.
- Calculate the breakeven point and margin of safety from the following information Fixed cost .Rs.10,000, sales in Rs.25,000, selling price per unit Rs.30; variable cost per unit Rs.10.

### Course Outcome 5(CO5):

1. From the following information extracted from the books of a manufacturing company, compute the operating cycle in days and the amount of working capital required:

| Period Covered                                | 365 days |
|---|----------|
| Average period of credit allowed by suppliers | 16 days  |
| Average Total of Debtors Outstanding          | 480      |
| Raw Material Consumption                      | 4,400    |
| Total Production Cost                         | 10,000   |
| Total Cost of Sales                           | 10,500   |
| Sales for the year                            | 16,000   |
| Value of Average Stock maintained:            |          |
| Raw Material                                  | 320      |
| Work-in-progress                              | 350      |
|   |          |

**Finished Goods** 

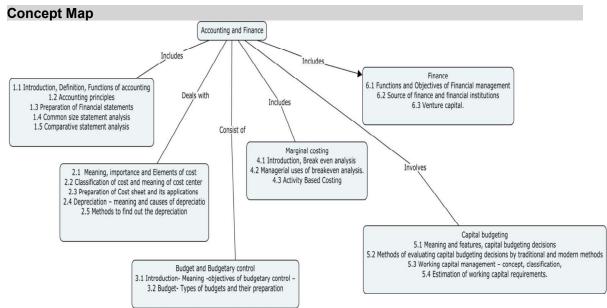

260

2. From the following data of a project, Calculate IRR and suggest whether the project is to be undertaken or not if the cut off rate is 9%.

| Cash Out         | flow (Rs.) | 1,50,000 |
|------------------|------------|----------|
|                  | Year 1     | 41,000   |
| Cash Inflow(Rs.) | Year 2     | 50,000   |
|                  | Year 3     | 50,000   |
|                  | Year 4     | 42,000   |

# Course Outcome 6(CO6):

- 1. Analyse the sources of finance to start small scale business.
- 2. Suggest suitable sources of finance to start a business with a capital of 60 crores.

# Syllabus

Accounting Introduction definition, functions of accounting, accounting principles. Preparation of financial statements and study them with common size and comparative statements. Cost Accounting - Meaning and importance -Elements of cost- classification of cost- Cost centre, Preparation of cost sheet and its applications .Depreciation - meaning and causes of depreciation, Methods to find out the depreciationBudget and Budgetary control- Introduction--objectives of budgetary control -Budget-Types of budgets and Meaning their preparation.Marginal costing- Introduction, Break even analysis -Managerial of breakeven analysis. Activity based Costing. Capital budgeting- Meaning and features, capital budgeting decisions, Methods of evaluating capital budgeting decisions by traditional and modern methods. Working capital management - concept, classification, Estimation of working capital requirements.Finance: Functions, Objectives of financial management and Source of finance and financial institutions, Venture capital. AnalysisCase Studies: Cost management in the construction industry. (Only for assignment)

### 18CE560

DESIGN OF STEEL ELEMENTS

| Category | L | Т | Ρ | Credit |
|----------|---|---|---|--------|
| PC       | 3 | I | - | 3      |

### Preamble

The primary concern of an engineer is design. Structural design consists conceptualization, idealization, analysis, design, construction and maintenance. Conceptualization is required to arrive at the final shape and size of the structure. Idealization involves reducing the conceived structure into primary elements. By analysis internal forces like bending moments, shear, torsion, compression and tension in each and every element is determined. Design assigns every element a particular material and size. Construction involves putting all the elements together to perform like the originally conceived structure. Maintenance is needed to keep the performance of the structure without deterioration. In this course, the exposure to code provisions, Plastic analysis and designs of structural elements, like beam, walls and columns, made of steel are dealt with. Further the elements are designed for internal forces like tension, compression, bending moment and shear.

#### Prerequisite

18CE220-Engineeering Mechanics, 18CE320-Mechnics of Solids

### Course Outcomes

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Demonstrate the force transferring mechanism, apply the principles in designing and detailing the bolted connections                | 30                   |
| CO2          | Illustrate the force transferring mechanism and apply the principle in designing and detailing the welded connections               | 10                   |
| CO3          | Apply the code provisions in estimating the capacity, and dimensioning the member with detailing of the steel tension members.      | 15                   |
| CO4          | Compute the capacity and arrive compression members' cross section along with the suitable column base.                             | 20                   |
| CO5          | Execute the plastic analysis of indeterminate beams and portal frames to predicting collapse load factor / plastic Moment capacity. | 10                   |
| CO6          | Apply the code provisions for the strength and stability assessment of flexure members with or without lateral support              | 15                   |

On the successful completion of the course students will be able to

\*\*\* Weightage depends on Bloom's Level, number of contact hours.

# Sample Questions for Course Outcome Assessment\*\*

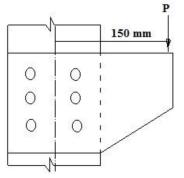

\*\* (2 to 3 at the cognitive level of course outcome)

### Course Outcome 1(CO1):

- Design rolled steel I- sections for a simply supported beam with a clear span of 6m .it carries a UDL of 50 KN per metre exclusive of self-weight of the girder The beam is laterally unsupported.
- 2. Calculate the maximum span of ISMB600 beam which can be used to carry a uniformly distributed load excluding its self weight equal to its bending capacity. The beam can be considered as laterally supported.
- 3. A simply supported beam of span 10m subjected to two point loads each of magnitude 45kN at 2.5m from the simply supports. Design the beam according to strength criteria if the compression flange is laterally supported at mid span

### Course Outcome 2(CO2):

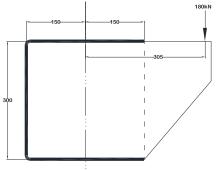

- 1. A bolted shell is made up of 14mm thick plates. The joint is double bolted lap joint with M22 bolt of grade 4.6 at a pitch of 75mm. Determine in what way the joint will fail? Also calculate the efficiency of the joint.
- 2. Find the value of P, if M20 bolts of grade 4.6 are to be used in the bracket connection as shown in Figure 1. Consider the pitch and edge distance as 60 mm. Use Fe410 grade plates.

3. Design a lap joint between two plates of size 100 x 18mm and 100 x 12mm thick so as to transmit a factored load of 120kN using M20 bolts of grade 4.6 and grade Fe410. Also determine the efficiency of the joint.

### Course Outcome 3(CO3):

- 1. How to calculate the effective throat thickness of fillet and groove weld, explain with the help of a neat sketch?
- 2. An ISMC 300 is used to transmit a factored force of 850kN. The channel section is connected to a gusset plate 10mm thick. Determine a suitable fillet weld length for the connection, if the overlap is limited to 310mm. Use slot weld if required. Assume the thickness of weld as 8mm.
- 3. A bracket plate is welded to the flange of a column as shown below. Calculate the size of the weld required to support a factored load of 100kN.

# Course Outcome 4 (CO4):

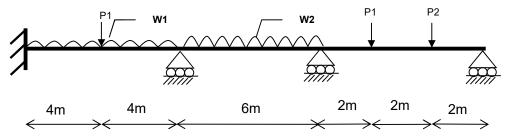

1. A single unequal angle section ISA 100 x 75 x 10 mm is connected to a 12 mm thick gusset plate at the ends with 6 Nos. of M16 bolts of grade 4.6 are arranged in a single row. Determine the design tensile strength of the angle section if 100 mm leg is connected to the

gusset plate. Consider the pitch and edge distance as 60 mm and 40 mm respectively. Use Fe410 plates.

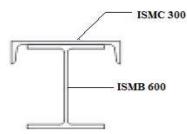

- 2. Design a single angle tension member carrying a load 200 KN, The length of the member is 4 m. The member is connected to 6 mm thick gusset plate with M20 Gr.8.8 bolts. Detail the connection.
- 3. A single unequal angle 100 x 75 x 6 mm is connected to a 8 mm thick gusset plate at the ends by 4 mm welds. The welded connection is designed for the full tensile capacity of the cross section. Determine the length of weld
  - a) if the gusset is connected to the 100 mm leg.
  - b) if the gusset is connected to the 75 mm leg.
- The yield strength and ultimate strength of the steel used are 250 MPa and 410 MPa.and the grade of electrode is E51.

### Course Outcome 5 (CO5):

- 1. State the limitations of lower bound and upper bound theorem.
- 2. Determine the required plastic moment capacity for the loads w<sub>1</sub>=10kN/m,P<sub>1</sub>=50kN,w<sub>2</sub>=40kN/m,P<sub>2</sub>=60kN.State the specialty of this type of loading if any.

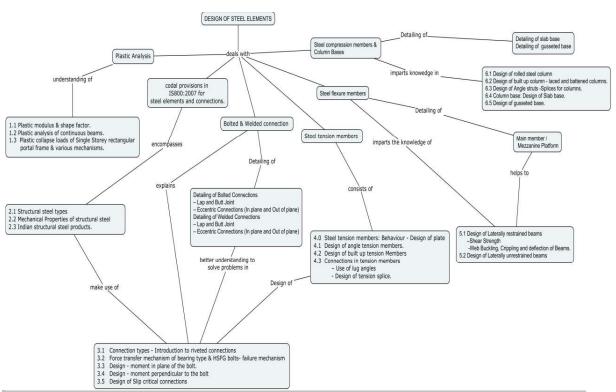

3. Find the plastic section modulus for the below given cross section.

### Course Outcome 6(CO6):

- 1. Determine the load carrying capacity of a built-up column section made of ISMB400 with flange plates of size 250 x 20mm. The effective length of the column is 6m.
- 2. Design a slab base for a column section of ISHB 400 @ 822 N/m supporting an axial load of 700 kN. The base plate is to rest on a concrete pedestal of M20 grade concrete.
- 3. An ISHB 350 @ 710.2 N/m stanchion is supported on a slab base having 500 x 400 x 16 mm. The cleat angles of 60 x 60 x 10 mm are connected to the flange of the stanchion by 2 nos. of M20 bolts of grade 4.6 to keep the stanchion in position. Base plate is connected to the concrete pedestal of size 1 x 1 x 0.5 m using 4 anchor bolts of 20 mm dia. having 250 mm length. Draw to a suitable scale the following:
  - I. Sectional elevation
  - II. Plan of slab base giving all details.

#### Concept Map

### Syllabus

Introduction of Structural steel Structural steel types, Mechanical Properties of structural steel, Indian structural steel products. Design Philosophy of steel structures: Introduction, Working stress method, Limit state method, Classification of cross sections, IS800:2007 related provisions. Bolted connection: Connection types, Introduction to riveted connections, Force transfer mechanism of bearing type & HSFG bolts, failure mechanism, Design, direct tension, compression, moment in plane of the bolt, moment perpendicular to the bolt, Design of Slip critical connections Welded connection: Type of welds, joints, strength of welds, Design, direct tension, compression, moment in plane of the weld, moment perpendicular to the weld. Tension members: Behaviour, Design of plate and angle tension members, design of built up tension Members, Connections in tension members, Use of lug angles, Design of tension splice. **Compression members:** Type of Column sections, Design, rolled steel section, built up section, laced and battened columns, Angle struts, Splices for columns. Column base: Slab base and gusseted base. Plastic Analysis: Theory & assumptions yield criteria, plastic modulus & shape factor, plastic analysis of continuous beams, Plastic collapse loads of Single Storey rectangular portal frame & various mechanisms. Flexure members: Behaviour - Design, simple and compound beams, laterally restrained, laterally unrestrained, Factors affecting lateral stability, Shear Strength, Web Buckling, Crippling and deflection of Beams.

### **Indian Standard Codes**

- 1. IS: 800 2007, Code of Practice for general construction in steel, BIS, New Delhi
- 2. SP 6 (1) Structural steel sections, BIS, New Delhi
- 3. IS: 816 1969, Code of practice for use of metal arc welding for general construction in mild steel.
- 4. IS: 808 1989 Dimensions For Hot Rolled Steel Beam, Column, Channel and Angle Sections.

#### **Course Contents and Lecture Schedule**

| Module | Topic  | No. of | Course  |  |  |
|--------|--|--------|---------|--|--|
| No.    |  | Hours  | Outcome |  |  |
| 1      | Introduction of Structural steel   |        |         |  |  |
| 1.1    | Structural steel types – Mechanical Properties of                                      | 1      |         |  |  |
|        | structural steel- Indian structural steel products.                                    |        |         |  |  |
| 1.2    | Design Philosophy of steel structures: Introduction                                    | 1      |         |  |  |
|        | <ul> <li>Working stress method – Limit state method</li> </ul>                         |        |         |  |  |
| 1.3    | Classification of cross sections- IS800:2007 related provisions.                       | 1      |         |  |  |
| 1.4    | <b>Bolted connection:</b> Connection types &Introduction to riveted connections.       | 1      | CO1     |  |  |
| 1.5    | Force transfer mechanism of bearing type & HSFG bolts- failure mechanism.              | 2      |         |  |  |
| 1.6    | Design of bolted connection - direct tension – compression.                            | 2      |         |  |  |
| 1.7    | Design of bolted connection - moment in plane of the bolt                              | 2      |         |  |  |
| 1.8    | Design of bolted connection - moment perpendicular to the bolt                         | 2      |         |  |  |
| 1.9    | Design of Slip critical connections  | 2      | 1       |  |  |
| 2      | Welded connection  |        | 1       |  |  |
| 2.1    | Type of welds, joints - strength of welds.   | 1      |         |  |  |
| 2.2    | Design of welded connection - moment in plane of the weld                              | 2      | CO2     |  |  |
| 2.3    | Design of welded connection - moment perpendicular to the weld                         | 2      |         |  |  |
| 3      | Tension members: Behaviour - Design of plate   | 1      |         |  |  |
| 3.1    | Design of angle tension members.   | 2      |         |  |  |
| 3.2    | Design of built up tension Members   | 2      | CO3     |  |  |
| 3.3    | Connections in tension members – Use of lug angles - Design of tension splice.         | 2      |         |  |  |
| 4      | Compression members: Type of Column sections.  | 1      |         |  |  |
| 4.1    | Design of rolled steel column  | 2      |         |  |  |
| 4.2    | Design of built up column - laced and battened columns.                                | 2      | CO4     |  |  |
| 4.3    | Design of Angle struts -Splices for columns.   | 2      | 1       |  |  |
| 4.4    | Column base: Design of Slab base.  | 2      |         |  |  |
| 4.5    | Design of gusseted base.   | 2      | 7       |  |  |
| 5      | Plastic Analysis   |        |         |  |  |
| 5.1    | Theory & assumptions yield criteria, plastic modulus.                                  | 1      | CO5     |  |  |
| 5.2    | shape factor - plastic analysis of continuous beams.                                   | 2      | 7       |  |  |
| 5.3    | Plastic collapse loads of Single Storey rectangular portal frame & various mechanisms. | 2      |         |  |  |

| 6   | Flexure members: Behaviour - Design - simple and compound beams   | 2 | CO6 |
|-----|---|---|-----|
| 6.1 | Design of Laterally restrained beams –Shear<br>Strength-Web Buckling, Crippling and deflection of<br>Beams. | 2 |     |
| 6.2 | Design of Laterally unrestrained beams - Factors affecting lateral stability                                | 2 |     |

# List of Exercises for Detailing part - Assignments

| Module<br>No. | Exercise Details  |
|---------------|---|
| 1.            | Detailing of Bolted Connections – Lap and Butt Joint  |
| 2.            | Detailing of Bolted Connections – Eccentric Connections (In plane and Out of plane)           |
| 3.            | Detailing of Welded Connections – Lap and Butt Joint  |
| 4.            | Detailing of Welded Connections – Eccentric Connections (In plane and Out of plane)           |
| 5.            | Detailing of Tension Members – Plate / angle  |
| 6.            | Detailing of Tension Members splices  |
| 7.            | Detailing of column splices   |
| 8.            | Detailing of column and slab base   |
| 9.            | Detailing of column and gusseted base   |
| 10.           | Detailing of Flexural Members – Main member / Mezzanine Platform with simple end connections. |

# Preamble

Students of Civil engineering would get exposure in the properties of engineering materials and to identify the behaviour of the given material.

### Prerequisite

Fundamentals of Mathematics, strength of materials and Concrete technology.

#### Course Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement   | Weightage***<br>in % |
|--------------|--|----------------------|
| CO1          | Determine the behaviour of structural elements, such as bars,<br>beams and springs subjected to tension, compression, shear,<br>bending and torsion. | 40                   |
| CO2          | Determine the physical properties of constituent material of concrete.   | 15                   |
| CO3          | Determination the properties of fresh concrete.  | 15                   |
| CO4          | Determine the properties of hardened concrete.   | 10                   |
| CO5          | Design concrete mixes and apply statistical quality control techniques   | 10                   |
| CO6          | Explain durability behaviour of concrete   | 10                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours

# List of Experiments / Activities with CO Mapping

### Part A: Strength of Materials Lab. (Any six experiments are to be conducted)

| S.No | Description (Cycle 1)   | No of<br>Hours | Course<br>Outcome |
|------|---|----------------|-------------------|
| 1.   | Determination of the Young's Modulus of Steel by conducting tension test in UTM.  | 2              |                   |
| 2.   | Determination of the Young's Modulus of the beam (Steel, Wood, Aluminium etc.) by conducting the bending test.                                      | 2              |                   |
| 3.   | Determination of the Young's Modulus of the beam (Steel, Wood,<br>Aluminium etc.) by conducting the bending test using Huggen<br>Berger Tensometer. | 2              |                   |
| 4.   | Determination of the rigidity modulus of the material by conducting torsion test.   | 2              |                   |
| 5.   | Determination of the rigidity modulus of the compression and tension spring by conducting spring test.  | 2              | CO1               |
| 6.   | Determination of the Young's Modulus of the beam (Steel, wood, Aluminium etc.) by conducting the deflection test in UTM                             | 2              |                   |
| 7.   | Determination of Brinell hardness and Rockwell hardness for   | 2              |                   |

| Steel, Copper, Aluminium and Brass. |    |  |
|-------------------------------------|----|--|
| Total Hours                         | 12 |  |

### Part B: Concrete Lab

| S.No | Description (cycle 2)  | No of<br>Hours | Course<br>outcome |
|------|--|----------------|-------------------|
| 1.   | Determination of Consistency and setting time of cement                                    | 2              |                   |
| 2.   | Determination of Bulk Density, Specific gravity, void ratio of fine and coarse aggregates. | 2              |                   |
| 3.   | Determination of fineness modulus and grading zone of fine and coarse aggregates.          | 2              | CO2               |
| 4.   | Determination of Maximum bulk of fine aggregate.   | 2              |                   |
| 5.   | Determination of workability of concrete by slump test                                     | 2              |                   |
| 6.   | Determination of workability of concrete by compaction factortest                          | 2              | CO3               |
|      | Total Hours  | 12             |                   |

# **Demonstration Exercises**

| S.No | Description   | Course outcome |
|------|---|----------------|
| 1.   | Test on hardened concrete (cube compressive strength, split |                |
|      | tensile test, flexure test)                                 | CO4            |
| 2.   | Determination of elastic modulus of concrete.               |                |
| 3.   | Design of concrete by IS method.                            | CO5            |
| 4.   | Durability properties of concrete.                          | CO6            |

# Preamble

This laboratory course work is intended to impart hands on training in evaluating the water quality parameters, wastewater characteristics and ambient air quality status measurements. This will form the basic input data for arriving at a solution/treatment for upkeep of the environment and promoting public health.

Prerequisite

Fundamentals of Mathematics, Water supply Engineering, Wastewater Engineering **Course Outcomes** 

| CO<br>Number | Course Outcome Statement   | Weightage***<br>in % |
|--------------|--|----------------------|
| CO1          | Fix the chemical characteristics of Water from different sources.  | 20                   |
| CO2          | Fix the chemical characteristics of Wastewater of different sources.   | 20                   |
| CO3          | Conduct experiments to find optimum coagulant dosage for suspended solids removal from water and wastewater samples. | 10                   |
| CO4          | Obtain the correct dosage of lime and soda needed for the removal of hardness from water.                            | 10                   |
| CO5          | Fix the chlorine dosage needed for the effective disinfection of water & wastewater samples.                         | 10                   |
| CO6          | Measure the ambient air quality parameters such as Particulate<br>Matter, NO <sub>x</sub> and SO <sub>x</sub> .      | 10                   |
| C07          | Perform physical Characterization of municipal solid waste.  | 10                   |
| CO8          | Assess the noise level in an area.   | 10                   |

On the successful completion of the course students will be able to

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

### List of Experiments/Activities with CO Mapping

- 1. Determination of Hardness, Alkalinity and Chlorides in water sample.
- 2. Determination of Fluorides in drinking water Spectro photometric analysis.
- 3. Determination of Sulphate in water sample Turbiditymetric analysis.
- 4. Determination of Dissolved oxygen in drinking water.
- 5. Heavy metal measurement using AAS.
- 6. Optimum coagulant dosage for removal of turbidity in water.
- 7. Estimation of chlorine dosage for disinfection of water.
- 8. Determination of Total solids, suspended solids, Dissolved solids, Organic solids, Inorganic solids in water and wastewater samples.
- 9. Determination of Nitrates in water and wastewater Spectro photometric analysis.
- 10. Determination of COD of wastewater samples.
- 11. Determination of Oil and greasy matters in wastewater samples.
- 12. Determination of Ammonia nitrogen in wastewater samples.
- 13. Determination of Phosphate in wastewater samples.
- 14. Measurement of Ambient air quality parameters Particulate Matter, SO<sub>2</sub>, NOx

### **Demonstration**

- 1. Determination of pH of water and wastewater.
- 2. Determination of BOD of wastewater.

3. Characterization of municipal solid waste and volatile component Estimation.

# Preamble

This course offers the theories and methods for accessing the subsurface condition at the construction site, determining the bearing capacity of shallow foundations, load carrying capacity of pile foundations, computing settlement of foundations, earth pressure acting on retaining walls and stability analysis of retaining walls.

### Prerequisite

18CE520 - Soil Mechanics

### Course Outcomes

| Origination             | -   |

### Sample Questions for Course Outcome Assessment\*\*

# Course Outcome1(CO1):

- 1. Explain the factors to be considered while planning a subsurface exploration program.
- 2. How would you fix the depth and spacing of boreholes for subsurface exploration?

3. Subsoil at a construction site comprises of coheshionless soil deposit extending for a large depth. Suggest an appropriate in-situ penetration test for subsurface exploration and explain its procedure. How the test results are correlated to various soil properties?

### Course Outcome2(CO2):

1. Determine the safe load that can be carried by a rectangular footing of 3m x 2m size, placed at a depth of 1.8m below the G.L. The foundation soil has the following properties:

 $y = 17 \text{ kN/m}^3$ , C = 20kN/m<sup>2</sup> and Ø = 20<sup>0</sup>.

Assume a factor of safety of 2.5 and take Nc' = 11.8, Nq' = 3.8 and N $\gamma$ ' = 1.3. Use BIS procedure.

- 2. Estimate the Immediate Settlement of a rigid concrete footing, 1m x 2m size, founded at a depth of 1m in a soil with E =  $10^4$ kN/m<sup>2</sup>,  $\mu$  = 0.35. The footing is subjected to a pressure of 230 kN/m<sup>2</sup>. Assume Influence coefficient as 1.2.
- 3. A Rectangular footing 1.5m x 2m is located in a deposit of dense sand at a depth of 1.8m below the surface. The moist unit weight of the sand above the water table is 17.5kN/m<sup>3</sup> and the saturated unit weight is 19.5kN/m<sup>3</sup>.Water table may riseupto the base of the footing during rainy season. Take C = 0,  $\emptyset = 35^{\circ}$  and from SPT, N<sub>corrected</sub> = 25. Take N<sub>q</sub>= 33 and N<sub>y</sub>= 37. Calculate the net allowable bearing capacity considering shear failure (Use Terzaghi's equation) and a permissible settlement of 25mm.

### Course Outcome 3(CO3):

- 1. Explain the concept of Floating Foundation.
- Design a rectangular combined footing to support two adjacent columns (size 40 cm x 40 cm) at a distance of 5 m carrying loads of 3 MN and 4 MN. The lighter column is near the property line. The allowable soil pressure is 400 kN/m<sup>2</sup>.
- Design a trapezoidal combined footing for two adjacent columns (size 30 cm x 30 cm) at a distance of 4 m carrying loads of 1.2 MN and 0.9 MN. Take the allowable soil pressure as 200 kN/m<sup>2</sup> and the length of the footing as 5 m.

### Course Outcome 4 (CO4):

- A pile of 0.3m diameter is driven through a clayey stratum upto a depth of 10m. It is observed that the undrained cohesion varies from 12 kN/m<sup>2</sup> at its surface to 65 kN/m<sup>2</sup> at a depth of 10 m. Determine the safe load on the pile with a factor of safety of 3.0
- 2. A 16-pile group has to be arranged in the form of square in soft clay with uniform spacing. Neglecting end bearing, determine the optimum value of the spacing of the piles in terms of the pile diameter, assuming shear mobilization factor of 0.5.
- 3. Explain Downward drag phenomena in piles.

### Course Outcome 5 (CO5):

- 1. Recall the need for dewatering.
- 2. Explain Precompression method of soil stabilization.
- 3. Explain Vibroflotation method for improvement of Cohesionless soil deposit.

### Course Outcome 6(CO6):

- 1. Differentiate Active and Passive earth pressures.
- 2. Determine the total active earth pressure per meter length acting on a gravity retaining wall with the following data:

Height of the wall = 3.5m Backfill surface is horizontal

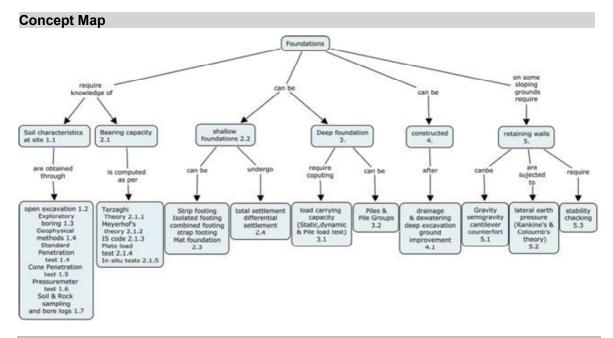

Backfill soil extending from the top of the wall upto a height of 1.5m has the

following properties: C= 0,  $\emptyset$  = 33<sup>o</sup> and  $\gamma$  = 18 kN/m<sup>3</sup>.

Backfill soil extending below the above mentioned top layer has the following properties: C= 0,  $\emptyset$  = 30<sup>0</sup>,  $\gamma$  = 17.5 kN/m<sup>3</sup> and  $\gamma_{sat}$  = 19.5 kN/m<sup>3</sup>.

Water table is at a depth of 1.5m below the top of the wall.

3. Amasonry retaining wall is 1.0 m wide at top, 2.5 m wide at base and 4 m high. It is trapezoidal in section and has a vertical face on the earth side. The backfill is inclined at an angle of 15<sup>o</sup> with the horizontal. The angle of internal friction of the fill = 30<sup>o</sup> and the unit weight of the fill is 16 kN/m<sup>3</sup>. The unit weight of the masonry is 23 kN/m<sup>3</sup>. Take angle of friction = 25<sup>o</sup> and the allowable bearing capacity of the soil as 400 kN/m<sup>2</sup>. Check the stability of the retaining wall.

# Syllabus

Subsurface Exploration and Site investigation: Objectives of Site Investigation - Stages -Planning - Methods of Site Investigation - Depth and Spacing of bore holes - Penetration Tests (SPT and SCPT) - Disturbed and Undisturbed samples - Sampling techniques - Split Spoon sampler - Thin walled sampler - Stationary Piston sampler - Rock Sampling - RQD - Use of Bore log. Bearing Capacity and Settlement of Foundation: Types of Bearing Capacity - Terzaghi's theory and BIS Formula - Factors affecting bearing capacity - Bearing Capacity frominsitu tests (SPT, SCPT and Plate Load Test) - Types of settlement - Allowable settlement - Determination of settlement of foundations in granular and clay deposit - Codal Provisions - Contact Pressure. Shallow Foundations: Functions - Requisites of foundation -Types of shallow foundations -Selection of Foundation based on soil condition -Conventional procedure for proportioning of foundations for equal settlement - Floating foundation. Deep Foundations: Consideration leading to selection of pile foundation - Functions and Types of pile foundation - Construction of Piles - Estimating load carrying capacity of piles by Static formula - Dynamic Formulae - Pile Load Test - Negative skin friction in piles - Use of under-reamed piles in expansive soils - Pile Group - Efficiency and Load Carrying capacity of Pile Group. Ground Improvement Techniques: Drainage and dewatering techniques - Introduction to different ground

improvement techniques and their suitability. **Lateral earth Pressure and Retaining Walls:** Types of lateral earth pressure - Rankine's Earth Pressure Theory for cohesive and non cohesive backfill- Coulomb's earth pressure theory -Types of retaining walls - Design principles of Gravity and Cantilever retaining walls - Reinforced earth walls (concept)

### Preamble

The course aims to make the students learn the principles of highways, their components and design of flexible and rigid pavements. Further, students will get acquainted with the treatment for failures and remedial measures during maintenance of pavements. This also imparts the student's knowledge of planning, design, construction and maintenance of railway tracks. The students acquire proficiency in the application of modern techniques such as GIS, GPS and remote sensing.

### Prerequisite

Nil

### Course Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Understand the basic concepts of highway planning and apply them in geometric design of roads           | 25%                  |
| CO2          | Understand the principles and design the flexible and rigid pavement using relevant IRC codes.          | 20%                  |
| CO3          | Gain knowledge on testing procedures of highway materials and construction of different types of roads. | 15%                  |
| CO4          | Understand the basics of railway planning and apply them in design of various railway geometrics.       | 20%                  |
| CO5          | Understand the functions of various components of railways, points and crossings.                       | 10%                  |
| CO6          | Understand the concepts of track maintenance and signalling in railways                                 | 10%                  |

\*\*\* Weightage depends on Bloom's Level, number of contact hours.

### Assessment Pattern: Psychomotor

| Psychomotor Skill       | Mini project /Assignment/Practical Component |
|-------------------------|--|
| Perception              | -  |
| Set                     | -  |
| Guided Response         | 40   |
| Mechanism               | 60   |
| Complex Overt Responses | -  |
| Adaptation              | -  |
| Origination             | -  |

### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

# Course Outcome 1(CO1):

- 1. State the role of Indian Roads congress in Highway planning.
- 2. Derive the expression for super elevation giving its relationship with gauge, Speed and radius of the curve.
- 3. Calculate OSD required on a two way highway, if the speed of overtaking vehicle are kmph. Assume average rate of acceleration of 2.1 kmph/sec. Assume all other data as per IRC. Draw a neat sketch of overtaking zone and show the position of sign post.

# Course Outcome 2(CO2):

- 1. What is rigidity factor in design of highway pavement?
- 2. Design a new flexible pavement for a two lane undivided carriage way using the following data

| Design CBR value                              | = 5%                |
|---|---------------------|
| Initial Traffic on completion of construction | on = 300 cv per day |
| Average growth rate                           | = 6% per year       |
| Design life                                   | = 15 years          |
| Vehicle Damage Factor Value (VDF)             | = 2.5               |

3. Design a cement concrete pavement using the following data.

Wheel load P=5100kg.

Modules of elasticity of cement concrete E= 3×10<sup>5</sup>kg/cm<sup>2</sup>

Poisson's ratio ( $\mu$ ) =0.15.

Radius of contact area (a) =15 cm.

Modules of sub grade reaction K= 15 kg/cm<sup>3.</sup>

Concrete flexural strength fr =40kg/cm<sup>2</sup>.

Co-efficient of thermal expansion  $e = 10 \times 10^{-6}$ °C.

Temperature variation t= 16.4°C.

Contraction joint spacing L = 4.5m.

# Course Outcome 3(CO3):

- 1. State the desirable properties of aggregates used in pavements.
- 2. Explain various failures in rigid pavement and flexible pavements and discuss suitable maintenance for failures.
- 3. Discuss the construction procedure for WBM roads.

# Course Outcome 4 (CO4):

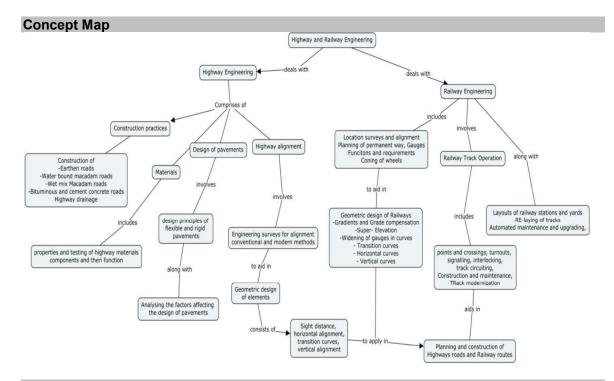

- 1. What is meant by sleeper density? State its importance
- 2. If a 8<sup>°</sup> curve track diverges from a main curve of 3 <sup>°</sup> in an opposite direction in the layout of a B.G. yard, calculate the super elevation and the speed on the branch line, if the maximum speed permitted on the main line is 50kmph.
- 3. Calculate the equilibrium cant on broad gauge Curve track of 60 for an average speed of trains 50 kmph. Calculate the maximum permissible speed after allowing the maximum cant deficiency.

# Course Outcome 5 (CO5):

- 1. Explain the working principle of points and crossings with a neat sketch.
- 2. Explain the functioning and types of marshalling yard with neat sketch.
- 3. Write cole's method to determine the number of crossings.
- 4. State the various methods of plate laying and explain the methods of plate laying widely adopted in India.

# Course Outcome 6 (CO6):

- 1. Explain the mechanism of interlocking with a help of a neat sketch.
- 2. Discuss briefly the locations and functions of different types of signals in a layout of railway station.
- 3. Describe the principle of track circuiting with neat sketch.

#### Syllabus

Highway alignment and geometric design of elements: History of road development in India, Engineering Surveys for Alignment – conventional and modern methods-Design of cross sectional elements- Sight Distance, horizontal alignment, transition curves, vertical alignment. Highway materials and design of pavements: Properties and testing of Highway materials -Components of pavement and their functions- Design principles of flexible and rigid pavements-Factors affecting the design of pavements- climate, sub grade, soil and traffic- Design of flexible pavements- Design of rigid pavements. Highway construction practice: Construction of roads – Earthen roads – Water Bound Macadam - Wet Mix Macadam roads – Bituminous, Polymer coated Aggregate Bituminous and Cement concrete roads - Highway Drainage. Maintenance of all types of roads - Distresses in pavements - Strengthening of pavements Railway materials, planning and design: Role of Indian Railways in National Development - Location surveys and alignment - Conventional and Modern methods- Permanent way - Gauges -Components - Functions and requirements - Coning of Wheels Geometric design of railway tracks: Gradients and Grade Compensation, Super-Elevation, Widening of Gauges in Curves, Transition Curves Horizontal and Vertical Curves. Railway track construction, operation and maintenance: Points and Crossings - Turnouts – Types - Working Principle -Signalling, Interlocking and Track Circuiting - Construction and Maintenance - Conventional, Modern methods and Materials, Track Modernization- Automated maintenance and upgrading, Technologies, high speed track, Re-laying of Track, Layouts of Railway Stations and Yards, Rolling Stock, Tractive power, Track Resistance, Level crossings.

# **Course Contents and Lecture Schedule**

| S.No. | Topics  | No. of<br>Lectures | Course<br>Outcome |
|-------|---|--------------------|-------------------|
| 1     | Highway alignment and geometric design of<br>elements   |                    |                   |
| 1.1   | History of road development in India – Jayakar<br>committee recommendations, Vision 2021, NHAI and<br>NHDP policies, PMGSY                      | 1                  | CO1               |
| 1.2   | Engineering Surveys for Alignment – conventional and<br>modern methods (Remote sensing, GIS and GPS<br>techniques), IRC Classification of roads | 1                  | CO1               |
| 1.3   | Geometric Standards - Highway cross sectional elements<br>– carriageway, ROW, camber, kerbs, shoulders, footpath,<br>drains                     | 1                  | CO1               |
| 1.4   | Sight Distance – Factors affecting Sight Distance – PIEV<br>Theory – Stopping Sight Distance (SSD)  | 1                  | CO1               |
| 1.5   | Overtaking Sight Distance (OSD) – Sight Distance at<br>Intersection   | 1                  | CO1               |
| 1.6   | Horizontal alignment – horizontal curves, Super elevation<br>– derivation, problems, camber – methods of attainment                             | 1                  | CO1               |
| 1.7   | Widening on curves, transition curves - types   | 1                  | CO1               |
| 1.8   | Vertical alignment - Ruling, Limiting, Exceptional and Minimum Gradients  | 1                  | CO1               |
| 1.9   | Vertical Curves – types, design, shift in curves  | 1                  | CO1               |
| 2.    | Highway materials and Design of pavements   |                    |                   |
| 2.1   | Propertiesof Highway materials – sub grade soil,<br>Aggregates, bitumen-Types   | 1                  | CO3               |
| 2.2   | Pavement components and their functions   | 1                  | CO2               |
| 2.3   | Design principles of Flexible and Rigid Pavements, factors affecting design of pavements – ESWL   | 1                  | CO2               |
| 2.4   | Sub grade soil and traffic, Design practice for Flexible Pavements  | 2                  | CO2               |
| 2.5   | Design practice for Rigid Pavements   | 2                  | CO2               |
| 2.6   | Joints in Rigid pavements - types   | 1                  | CO2               |

Passed Board of Studies Meeting held on 09.11.2019

Approved in 59th Academic Council Meeting held on 07.12.2019

| 3.         | Highway construction practice  |    |     |
|------------|--|----|-----|
| 3.1        | Construction practice - Water Bound Macadam , Wet Mix<br>Macadam road, Bituminous, Polymer coated Aggregate<br>Bituminousand Cement Concrete roads - Highway<br>Drainage.                        | 1  | CO3 |
| 3.2        | Highway Maintenance - Defects in flexible pavements –<br>surface defects, disintegration – symptoms, causes and<br>treatments  | 1  | CO3 |
| 3.3        | Failures in rigid pavements – Distresses in pavements  |    | 000 |
| 3.4<br>3.5 | Pavement Evaluation - Pavement surface conditions<br>Strengthening of pavement – Benkelman Beam Method   | 2  | CO3 |
| 4.         | Railway materials, planning and design   |    |     |

# Preamble

This course will cover various data structures and their operations for manipulating them. Students will learn how to organize the data so that, the data can be accessed and updated efficiently using computer programs.

### Prerequisite

18CE350 Programming for Problem solving

# **Course Outcomes**

On the successful completion of the course, students will be able to

| CO<br>Number | Course Outcome Statement   | Weightage***<br>in % |
|--------------|--|----------------------|
| CO1          | Compare algorithms using asymptotic notations based on time and space complexity (Understand)                        | 10                   |
| CO2          | Apply the concepts of stack and queue for suitable applications in trade off with time and space complexity. (Apply) | 10                   |
| CO3          | Illustrate the operations like insertion, deletion, traversing on the linear list data structure.(Apply)             | 15                   |
| CO4          | Illustrate the operations like insertion, deletion, traversing on the non linear tree data structure. (Apply)        | 20                   |
| CO5          | To store and uniformly distribute data in a hash table without collision. (Apply)                                    | 10                   |
| CO6          | To retrieve the maximum and minimum data in a collection and merge data using appropriate heap. (Apply)              | 15                   |
| C07          | Sort data of different size using suitable sorting procedure. (Apply)  | 20                   |

### **Assessment Pattern: Psychomotor**

| Psychomotor Skill       | Assignments |
|-------------------------|-------------|
| Perception              |             |
| Set                     | 20          |
| Guided Response         | 80          |
| Mechanism               |             |
| Complex Overt Responses |             |
| Adaptation              |             |
| Origination             |             |

# Sample Questions for Course Outcome Assessment\*\*

# Course Outcome 1 (CO1):

- 1. Define Space Complexity and Time Complexity.
- 2. Define Efficiency of an algorithm/program and ways to determine it.
- 3. List down the four different asymptotic notations and their need.

# Course Outcome 2 (CO2):

- 1. Create a Queue and demonstrate various operations in it.
- 2. Create a Stack and demonstrate various operations in it.
- 3. Demonstrate various applications of stack using suitable data.

# Course Outcome 3(CO3)

- 1. Given an array and a singly linked list. Which of these data structures uses more memory space to store the same number of elements? Justify your answer.
- 2. Check whether a given string is a palindrome or not using a double linked list.
- 3. Solve the Josephus problem using a circular linked list.

### Course Outcome 4 (CO4)

1. Perform the AVL algorithm for non AVL trees. In each case, count the number of updated links required by the AVL rotation. Given a simple expression tree, consisting of basic binary operators i.e., +, -, \* and / and some integers, write an algorithm to evaluate the expression tree.

2. Construct a binary tree using inorder and preorder traversal of the binary tree: Inorder D, B, H, E, A, I, F, J, C, G A, B, D, E, H, C, F, I, J, G Preorder

3. Construct binary tree. Show the step by step process with suitable algorithm.

### Course Outcome 5 (CO5)

- 1. Given input {4371, 1323, 6173, 4199, 4344, 9679, 1989} and a hash function h(x) = x (mod () 10), show the resulting
  - a. separate chaining hash table
  - b. hash table using linear probing, guadratic probing

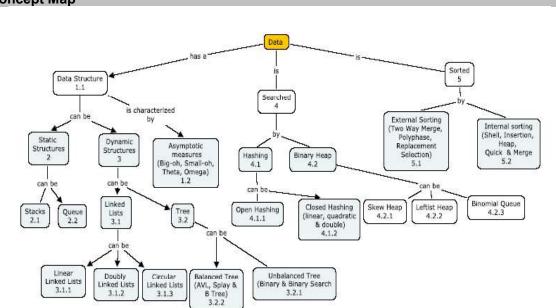

- 2. Consider implementing a hash table for an application in which we will build an initial hash table by inserting asubstantial collection of records. After this, we expect that the number of insertions and the number of deletions performed to be roughly the same, although there may be long runs of consecutive insertions or consecutive deletions. Furthermore, the table will use a probe strategy to resolve any collisions that occur during insertion, and therefore we will "tombstone" cells from which a record has been deleted. If we implement the hash table described above, then when we search for a record, we cannot conclude the record is not in the table until we have found an empty cell in the table, not just a tombstone. (We will ensurethat the table never reaches the state that there are no empty cells.) Explain carefully why the search cannot stopwhen a tombstone is encountered.
- Let m = 17, h1(x) = (k+15)%m, h2(x) = (4k+11)%m, and h3(x) = (7k+2)%m.Insert the keys 23, 7, 50, and 91 into the bit vector, and show the resulting vectors content. Then,find a key that is a false positive; that is, find a key that appears to have been inserted, but wasn't.

# Course Outcome 6(CO6):

- For a binary heap stored in an array, the root is stored in position 1, the parent of node i is stored in position floor(i/2), the left child is in position 2i, and the right child is in position 2i+1. What about a d-heap stored in an array? In what positions are the children and parent of node i stored? [Hint: to start, assume that the root is at position 0. Then modify your results to work with the root at position 1]
- 2. Show the result of inserting keys 1 to 15 in order (i.e. 1 first, then 2 second, then 3 third, etc.) into an initially empty leftist heap. Use the leftist heap insert (i.e. merge) algorithm at each step. Show each step for this process.
- Prove or disprove: A perfectly balanced tree forms if keys 1 to 2k 1 are inserted in order (again this means 1 first, then 2 etc) into an initially empty leftist heap. k is a positive integer.

### Course Outcome 7(CO7):

- 1. Estimate the execution time of Bubble sort for an reverse order input.
- 2. Recommend a suitable sorting procedure to operate on a large data set with jusification.
- 3. Apply quick sort to sort 11,9,13,8,5,7,6,4,18,3,19,1 in ascending order.

# Preamble

The design of modern reinforced concrete structures may appear to be highly complex. However, most of these structures are the assembly of several basic structural elements such as beams, columns, slabs, walls and foundations. Accordingly, the designer has to learn the design of these basic reinforced concrete elements. This course offers the design of reinforced concrete elements and footings using Limit State Method. This course follows the recommendations of IS 456:2000. It aims at determination of safe as well as economical sections and their reinforcements under various types of load combinations. At the end of this course, students will be able to identify and apply the design codes relevant to the design of reinforced concrete members and also they will be familiar with professional and ethical issues and the importance of lifelong learning in structural engineering. **Prerequisites** 

18CE220 Engineering Mechanics and 18CE510 Concrete Technology Course Outcomes

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Explain the design concepts of structural reinforced concrete elements under various forces and interpret IS codal provisions         | 10                   |
| CO2          | Design the structural reinforced concrete elements under flexure and detail the reinforcement   | 25                   |
| СОЗ          | Design the structural reinforced concrete elements under shear, torsion,anchorage and development length and detail the reinforcement | 15                   |
| CO4          | Design the structural reinforced concrete elements under compression and detailthe reinforcement                                      | 20                   |
| CO5          | Check the serviceability requirements of reinforced concrete elements under deflection and cracking                                   | 10                   |
| CO6          | Design the foundation and edtail the reinforcement  | 20                   |

On the successful completion of the course students will be able to

\*\*\* Weightage depends on Bloom's Level, number of contact hours

# Sample Questions for Course Outcome Assessment\*\*

Course Outcome 1 (CO1):

- 1. Define the term characteristic strength of materials.
- 2. Explain the differences between working stress method and limit state method.
- 3. Explain the stress-strain behavior of steel and find the stress and strain at various stress levels for Fe415 and Fe500 grade steels.

Course Outcome 2 (CO2):

- 1. What is the minimum reinforcement requirement for beam as per IS 456:2000
- Compute the reinforcement required for the rectangular section of size 230mm x 500mm effective subjected to a factored moment of 250 kNm. The materials used in the design are M25 and Fe500. Assume d1=35mm. Draw the cross section and longitudinal section of the beam showing reinforcement details.
- 3. Compute the reinforcement required for a two way slab simply supported on all the four sides with provision of torsion reinforcement at corners. The clear dimension of the room is 4m x 4m. It is supported on 230mm thick wall. Live load on slab is 3 kN/m2. Use M20 and Fe415 as materials. Draw the longitudinal section of the slab showing reinforcement details.

# Course Outcome 3 (CO3):

- 1. What is the expression related to beam subjected to combined bending, shear and torsion?
- 2. Compute the shear reinforcement required for a T-beam having breadth of web as 230mm and effective depth of 500mm subjected to an UDL of 30kN/m. The effective length of beam is 7m. The tension reinforcement is 5 Nos of 16mm diameter bar. Use M20 and Fe415 as materials. Draw the cross section and longitudinal section of the beam showing reinforcement details.
- 3. Compute the reinforcement required for a rectangular beam circular in plan of size 350mm x 550mm subjected to a bending moment of 140kNm, twisting moment of 18kNm and a shear force of 90kN under ultimate condition. Use M25 grade concrete and Fe415 as materials. Draw the cross section and longitudinal section of the beam showing reinforcement details.

# Course Outcome 4 (CO4):

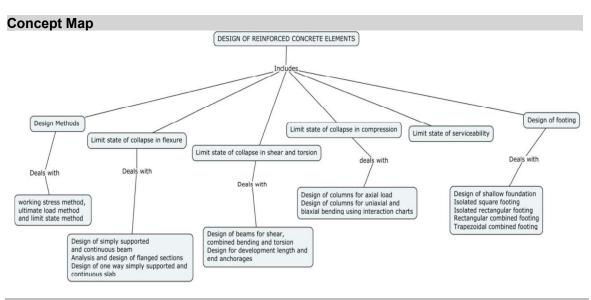

- 1. What is the reason for limiting maximum of 4% reinforcement in columns?
- Make use of limit state method, design a short circular column 6m long to carry a load of 750kN if both ends of the column are fully restrained, using (i) lateral ties and (ii) helical steel. Draw the cross section and longitudinal section of the column showing reinforcement details.
- 3. Make use of limit state method, design a column to carry an axial factored load of 2000kN and a factored moment of 50kNm on both the axes. Assume concrete M20 and steel Fe415. Draw the cross section and longitudinal section of the column showing reinforcement details.

# Course Outcome 5 (CO5):

- 1. What is the IS codal provision for the control of deflection for elements?
- 2. What is the IS codal equation for determining surface crack width?
- 3. A simply supported L-beam 5m span has effective flange width of 900mm, thickness of flange as 100mm, breadth of web as 250mm and effective depth as 450mm. there are 4 bars of 22mm in tension and 3 bars of 18mm in compression. Experiment the beam for deflection. Assume M20 grade concrete and Fe415 grade reinforcement.

### Course Outcome 6 (CO6):

- 1. What is the IS codal provision for nominal reinforcement required for footing?
- Compute the shear force and bending moment for a rectangular combined footing connecting two axially loaded columns of size 230mm x 230mm and 300mm x 300mm spaced at 2.90m carrying load of 650kN and 750kN under service state respectively. The safe bearing capacity of soil is 200 kN/m<sup>2</sup>. Use M20 and Fe415 as materials.
- Make use of limit state method, design an axially loaded square footing of uniform thickness for a column of size 300mm x 300mm carrying a load of 500kN under working stress condition. The allowable bearing capacity of soil is considered as 230kN/m<sup>2</sup>.

Materials: M20 & Fe415. Draw the plan and cross section of the footing showing reinforcement details.

### Syllabus

Design Methods: concept of working stress method, ultimate load method and limit state method; Limit state philosophy as detailed in IS code - characteristic strength and design strength of materials, characteristic loads and design loads, partial safety factors for loads and material strength, cover for durability and fire resistance. Limit state of collapse in flexure: assumptions, stress-strain curves for concrete and steel, stress block, maximum strain in concrete, limiting values of neutral axis for different grades of steel, balanced and under reinforced sections: Analysis and design of singly and doubly reinforced rectangular and flanges sections - simply supported and continuous beams; Design of one way and two way slabs simply supported, continuous and restrained using coefficients in IS code: Reinforcement detailing. Limit state of collapse in shear and torsion: design of beams for shear, combined bending and torsion; Design for development length and end anchorages; Reinforcement detailing. Limit state of collapse in compression: design of columns for axial load - square, rectangular and circular cross sections with lateral and spiral ties; Design of columns for uniaxial and biaxial eccentricities using interaction charts; Reinforcement detailing. Limit state of serviceability: serviceability requirements for RC elements; Introduction to working stress method; Deflection calculations using IS code coefficients, short term and long term deflection, crack width calculations. Design of footing: shallow foundation - isolated footing - square and rectangular; Combined footing – rectangular and trapezoidal; Reinforcement detailing.

# Preamble

This laboratory course is intended to give hands-on training to determine various index and engineering properties of soil, compaction characteristics, predict the properties of aggregates and subgrade material. With these properties students will able to identify, classify and appreciate the use of soil and aggregates as suitable construction materials, design appropriate foundations and pavements.

### Prerequisite

# 18CE520

### Course Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Conduct tests to determine index properties of soil such as Moisture Content, Specific Gravity and Atterberg's Limits | 20                   |
| CO2          | Conduct tests to determine Field Density and Particle Size Distribution of soil                                       | 15                   |
| CO3          | Determine the Coefficient of Permeability of soil   | 15                   |
| CO4          | Estimate the Shear Strength parameters of Cohesionless and Cohesive soils   | 15                   |
| CO5          | Predict the Compaction Characteristics of soil and evaluate the Strength of Sub Grade material                        | 15                   |
| CO6          | Perform tests for accessing the suitability of Aggregates in Highway and Railway works                                | 20                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

# List of Experiments/Activities with CO Mapping

- 1. (a) Determination of Specific Gravity of soil using Pycnometer.
  - (b) Determination of Water Absorption and Specific Gravity of Aggregates (size > 40 mm).
  - (c) Determination of Penetration value of Bitumen.
- 2. (a) Determination of Moisture Content of soil by Oven Drying method
- (b) Determination of Shrinkage Factors of soil.
  - (c) Determination of Softening Point of Bitumen.
- 3. Determination of Liquid and Plastic Limits of soil.

- 4. Grain size Distribution Analysis for soil.
- 5. Determination of Field Density of soil by sand Replacement Method.
- 6. Determination of Coefficient of Permeability of soil by Constant Head Permeability Test.
- 7. Determination of Coefficient of Permeability of soil by Variable Head Permeability Test.
- 8. Determination of Shear Strength parameters of soil by Direct Shear Test.
- 9. Determination of Unconfined Compressive Strength of clay.
- 10. Determination of Dry Density Moisture Content relation using Light Compaction (Standard Proctor Compaction Test).
- 11. Determination of California Bearing Ratio value of subgrade soil.
- 12. (a) Determination of Impact Value of aggregates.(b) Determination of Flakiness and Elongation Indices of aggregates.
- 13. Determination of Consolidation Properties of soil.

## **Demonstration Experiments:**

14. Grain Size Distribution - Hydrometer Analysis

15. Determination of Los Angeles Abrasion value of aggregates.

# Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

# Course Outcome1(CO1):

- 1. What is the present state of water resources potential of India and Tamilnadu?
- 2. What are the objectives of water resources development projects?
- 3. Mention the importance of National water policy and discuss the salient points in detail.

# Course Outcome2(CO2):

- 1. You are requested to propose suitable surface irrigation methods for different types of soil and crops. Discuss the various surface irrigation methods practiced in India.
- 2. Write about the importance of Soil water plant relationship using a sketch.
- 3. To increase the irrigation efficiencies, what is the various irrigation efficiencies used in irrigation network, explain.

# Course Outcome3(CO3):

- 1. As a Civil Engineer, you are assigned to select a site for the reservoir. Discuss the important criteria for site selection.
- 2. You are entrusted to fix the capacity of a multipurpose reservoir, explain the procedure to fix the reservoir capacity using mass curve analysis.
- 3. Propose pre and post construction measures to reduce the sediment inflow into the reservoir.

# Course Outcome 4 (CO4):

- 1. Classify dams with suitable examples.
- 2. Identify and discuss the various forces acting on gravity dam. What are the forces taken into account for extreme load combination?
- 3. What are the causes of failure of earthen dam and suggest suitable remedies?

# Course Outcome 5 (CO5):

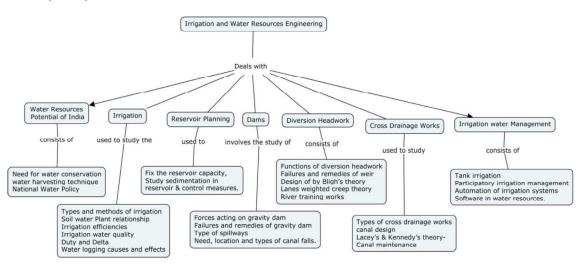

1. As a Civil Engineer, suggest the important components constructed to divert the water from river to new canal. Draw the layout of such diversion head work system and explain all the components in detail.

- 2. A drainage and a canal crosses each other as per the condition given below, suggest and explain the suitable cross drainage works for such situation.
- (i) Canal passes over the drain, (ii) Drain passes over the canal and (iii) Canal and drain crosses at the same level.
- 3. Design an irrigation channel carries discharge of 50 cumecs, also determine the longitudinal slope. Take Lacey's silt factor=1.0, side slope = 1/2 :1.

#### Course Outcome6(CO6):

- 1. Write the need and necessity for irrigation management transfer
- 2. Describe the various software in irrigation water resources management.
- 3. Discuss the components of tank irrigation system.

## **Concept Map**

#### Syllabus

Importance of water resources: Hydrological cycle and its importance-Status of water resource potential of India and Tamilnadu-Requirement of water for various uses - Need for water conservation-Water harvesting techniques-National water policy-Benefits of linking of rivers. Irrigation: Need for irrigation-Advantages and ill effects of irrigation-Types and methods of irrigation-Lift and rain fed irrigation-Relationship between soil, water and plant-Irrigation efficiencies-Irrigation water quality-Duty and Delta-Water logging, causes and effects. Reservoir planning: Site selection for reservoir-Classification of reservoirs-Determination of storage capacity-Reservoir sedimentation-Methods of controlling the sedimentation. Dams: Classifications of dams-Forces acting on gravity dam-Failures and remedies of gravity dam-Elementary and practical profile of gravity dam-Type of spillways-Need, location and types of canal falls. Diversion headwork and cross drainage works: Components and functions of diversion headwork-Types, failures and remedies of weir-Design of impervious floor of weir by Bligh's theory and Lane's weighted creep theory-River training works-Types of cross drainage works-Design of canal by Lacey's theory and Kennedy's theory-Canal lining and canal maintenance. Irrigation water management: Tank irrigation-Components of tank irrigation-Participatory irrigation management-Water user association-Automation of irrigation systems-Software in water resources.

#### Learning Resources

# Preamble

This course imparts knowledge on Construction Management principles needed for execution of projects effectively and efficiently

# Prerequisite

Nil

### Course Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Enumerate the objectives and principles of construction management                            | 15                   |
| CO2          | scuss the components involved in planning of resources for construction projects              | 10                   |
| CO3          | umerate tendering and contractual procedure and systems of execution of construction works    | 25                   |
| CO4          | Explain the process involved in measurement of construction works and preparation of accounts | 10                   |
| CO5          | Specify the process involved in maintenance and management of stores in construction projects | 10                   |
| CO6          | Apply the concept of network techniques in analyzing projects                                 | 30                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

| Origination             | -   |

# Sample Questions for Course Outcome Assessment\*\* Course Outcome 1(CO1):

- 1. Write the need and importance of managing projects in construction sector
- 2. Discuss the stages involved in execution of projects

3. As a project manager of a construction industry identify and discuss the functions you would exercise for successful completion of projects

# Course Outcome 2(CO2):

- 1. Define construction planning and mention its need in projects
- 2. A dam construction project is proposed to be constructed. Identify and discuss the factors you would consider for selection of a suitable site of project
- 3. As a project manager, mention on what basis you will decide upon the purchase of materials for your project with suitable reasoning

# Course Outcome 3(CO3):

- 1. Define the terms tender and contract
- 2. Differentiate between unit price and cost plus % contracts with applicability of each.
- 3. Due to heavy rains in a hilly terrain, landslide has occurred which needs to be cleared shortly. Identify the mode of execution of work you would resort to with suitable reasons

# Course Outcome 4(CO4):

- 1. Enumerate the various types of measurement of works
- 2. Identify a suitable type of measurement for the following works: Water Bound Macadam road, brick work and steel reinforcement fabrication
- 3. List the types of bills used for payment of works done

# Course Outcome 5(CO5):

- 1. List the classification of stores
- 2. Discuss the procedure for physical verification of stores
- 3. Identify the various discrepancies found during stock verification and suggest process of correcting it

# Course Outcome 6(CO6):

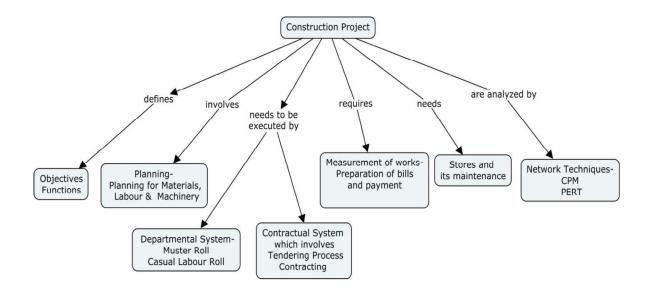

- 1. A project consists of 12 activities. The time required for each activity is given in the table below. Use the following logical relationships; draw a network diagram for the project and determine the critical path and duration required for completion of the project.
- Activity A,D and H can be performed concurrently and represent the start of the project
- B succeeds A; C and G follow H; D,C and B precede F; L follows A; M comes after G
- K is preceded by L; X cannot start until K, F and M are completed
- Z succeeds G: X and Z are last operations

| Activity           | Α | В | С | D | F | G | Н | K | L | M | Х | Z |
|--------------------|---|---|---|---|---|---|---|---|---|---|---|---|
| Duration<br>(days) | 4 | 6 | 4 | 4 | 6 | 3 | 3 | 4 | 8 | 3 | 2 | 2 |

- 2. Write the meaning of bar charts? Discuss its limitations and methods to overcome it
- 3. Conduct CPM analysis for the project using the given data and determine:
- i) ES, EF, LS & LF for the activities
- ii) Critical path and critical activities
- iii) Total and free floats for the activities
- iv) Draw the square network

|    | Act                | 1-2 | 1-3 | 2-5 | 2-7 | 3-4 | 3-6 | 4-5 | 5-6 | 5-7 | 6-7 | 7-8 |

#### Concept Map

#### Syllabus

**Construction Management –** General Principles – need, objectives & functions, Classification & stages involved in construction projects — Construction team—Preliminary planning of a scheme – Construction planning. **Tendering and contractual procedures** - definition of tender and contract. Deposits – Earnest Money Deposit and Security Deposit – legal implications — Penalties and Arbitration- Execution of works: Methods - Departmental labour- Muster Roll system and Casual Labour system.EPC and other forms of contracts. **Measurement of Works** – M-book, Types of measurements – original, pre and check measurement. Maintenance of Accounts — Types of bills and payment – completion reports and completion certificates. **Stores**: Classification and Codification systems - inspection and maintenance – Stock verification procedures. **Analysis of projects:** Work Breakdown Structure – Fulkerson's rules for drawing networks - network analysis – CPM and PERT- concepts and procedure.

# Preamble

This lab course focuses on students acquiring knowledge on arriving at quantities of items of works for buildings and road projects. It also gives an exposure to rate analysis for different types of works knowing its specifications.

# Prerequisite

Fundamentals of Mathematics, Building materials and technology

# Course Outcomes

On the successful completion of the course students will be able to:

| CO<br>Numbe<br>r | Course Outcome Statement   | Weightage<br>in % |
|------------------|--|-------------------|
| CO1              | Explain the detailed specifications of various activities in construction works                              | 10                |
| CO2              | Estimate quantities of items of works for residential buildings of load bearing type -Individual wall method | 16                |
| CO3              | Estimate quantities of items of works for residential buildings of load bearing type -Centre line method     | 16                |
| CO4              | Estimate quantities of items of works for residential buildings of framed type                               | 20                |
| CO5              | Estimate quantities of earthwork in cutting and embankment for road work                                     | 22                |
| CO6              | Conduct rate analysis for various activities involved in construction works                                  | 16                |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

| Create           |                   |                      |  |  |  |  |  |  |  |  |  |

#### **Assessment Pattern: Psychomotor**

| Psychomotor Skill       | Miniproject /Practical<br>Component/Observation |
|-------------------------|---|
| Perception              | 10  |
| Set                     |   |
| Guided Response         | 10  |
| Mechanism               | 80  |
| Complex Overt Responses |   |
| Adaptation              |   |
| Origination             |   |

# List of Experiments/Activities with CO Mapping

- 1. Framing detailed specifications for various activities involved in construction works
- 2. Preparation of Preliminary estimate of buildings
- 3. Estimate quantities of items of works for residential buildings of load bearing typeusing Individual wall method
- 4. Estimate quantities of items of works for residential buildings of load bearing typeusing Centre line method
- 5. Estimate quantities of items of works for residential buildings of framed type
- 6. Estimate quantities of earthwork in embankment for road work
- 7. Estimate quantities of earthwork in cutting and embankment for road work
- 8. Rate analysis concept and terminologies, CPWD- DSR/ PWD Schedule of rates
- 9. Arriving at rate per unit of items of plain concrete in different types of foundation, floor and weathering course work
- 10. Arriving at rate per unit of items of different types of RCC works in structural elements Beams, Columns, slabs etc.
- 11. Arriving at rate per unit of items of different types of Masonry works (Stone, Brick etc.), reinforced brick work.
- 12. Arriving at rate per unit of items of different types of finishing works plastering, flooring,DPC, pointing, painting etc.

# Preamble

This course provides an introduction to the finite element analysis, from engineering rather than a purely mathematical point of view.

# Prerequisite

Nil.

# Course Outcomes

On the successful completion of the course, students will be able to

| CO<br>Number | Course Outcome Statement   | Weightage***<br>in % |
|--------------|--|----------------------|
| CO1          | Execute the potential energy concepts, equations of equilibrium weak and variational formulation | 15                   |
| CO2          | Resolve the stresses and reaction forces in one dimensions                                       | 20                   |
| CO3          | Resolve the stresses and forces in trusses   | 20                   |
| CO4          | Resolvetwo dimensional problems using constant strain triangle<br>Elements                       | 15                   |
| CO5          | Execute isoparametric formulation for two dimensional problems                                   | 15                   |
| CO6          | Resolvethe Gaussian quadrature of one and two dimensional integrals                              | 15                   |

### Sample Questions for Course Outcome Assessment\*\*

# Course Outcome1(CO1):

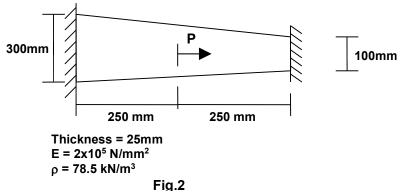

- 1. Explain internal and external forces with examples.
- 2. Compute the deflection at the centre of a simply supported beam subjected to uniformly distributed load over the entire span, Using Rayleigh Ritz method.
- 3. Discuss weighted integral and weak formulation with examples.
- 4. Compute the deflection at the free end of a cantilever beam subjected to uniformly distributed load over the entire span, Using Rayleigh Ritz method.
- 5. State theorem of minimum potential energy.

# Course Outcome2(CO2):

1. Compute the nodal displacement, stresses in each element and reaction forces. ( $E=2x10^5$  N/mm<sup>2</sup>). Axial force P=20N is applied as shown in Fig.1.

2. Resolve the nodal displacements, element stresses and reaction force for the bar shown in Fig.2 having P = 30kN.

3. Infer the element stiffness matrix and shape function for one dimensional bar element.

# Course Outcome3(CO3):

 Resolve the forces in the members of the truss shown in Fig.3 by finite element method. Take E = 200 GPa.

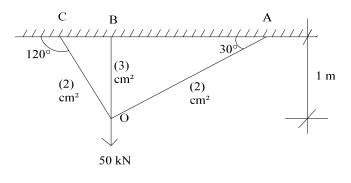

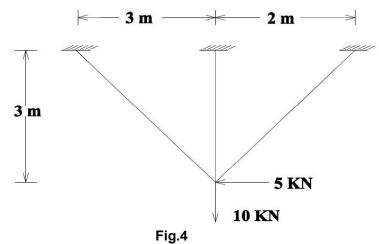

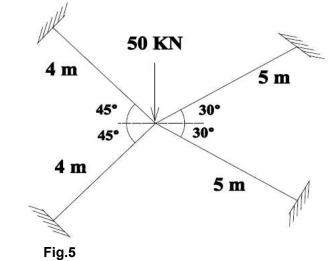

Fig.3

2. Compute the forces in the members of the truss shown in Fig.4 by finite element method. Take E = 200 GPa.

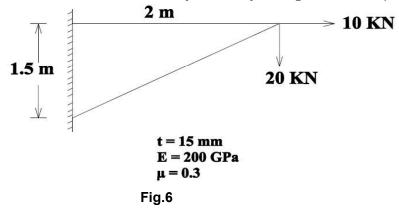

3. Resolve the forces in the members of the truss shown in Fig.5 by finite element method. Take E = 200 GPa.

#### Course Outcome 4 (CO4):

- 1. Describe plane stress and plane strain problem with examples.
- 2. Interpret the expression of shape function, strain displacement matrices and stiffness matrix for a CST element .
- 3. Compute the displacements and stresses for the element shown in Fig.6 using plane stress conditions. Body force may be neglected in comparison with the external forces.

# Course Outcome 5(CO5):

- 1. Discuss about the Isoparametric elements.
- 2. Infer the expression for the jacobian of transformation matrix of a quadrilateral element.
- 3. Interpret the expression of shape function for nine node quadrilateral element .

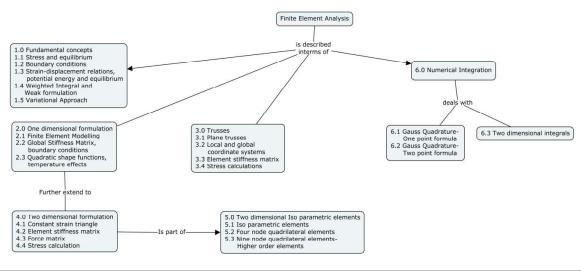

### Course Outcome 6(CO6):

1. Solve the integral  $\int 3e^x + x^2 + \frac{1}{x+2}dx$  using one point and two point Gauss

quadrature formula.

- 2. Interpret the expression for two dimensional integrals.
- 3. Solve  $\iint_{-1-1} (x^2 + y^2 + 2xy) dx dy$  using Gauss numerical integration.

### **Concept Map**

### Syllabus

**Fundamental Concepts:** Stresses and equilibrium – Boundary conditions – strain-displacement relations – stress-strain relations – potential energy and equilibrium – weighted integral and weak formulation – variational approach. **One dimensional formulation:** Finite element modelling – coordinates and shapes functions – Assembly of global stiffness matrix and global load vector – properties of K – finite element equations – treatment of boundary conditions – quadratic shape functions – temperature effects. **Trusses:** Plane trusses – local –global transformation - stiffness matrix – stress calculations.**Two dimensional formulation:** Finite element modelling – constant strain triangle – problem modelling and boundary conditions – stress calculations. **Two dimensional stress** - four node quadrilateral elements - Stress-strain relationship -Nine node quadrilateral elements-Higher order elements. **Numerical Integration:** One point formula and two point formula – two dimensional integrals.

DYNAMICS OF STRUCTURESAND EARTHQUAKE ENGINEERING

| Category | L | Т | Ρ | Credit |
|----------|---|---|---|--------|
| PE       | 3 | 0 | 0 | 3      |

### Preamble

This course deals with the dynamic analysis of single degree and multi degree freedom system. It covers dynamic response of single degree of freedom system with damping subjected to harmonic excitation and it's solving techniques and also the response of linear multi degree of freedom systems with regard to natural frequencies and mode shapes. This course also offers to introduce EQ phenomenon, including the causes, occurrence and its effect on to the built structures and explains all aspects of earthquake resistant design of Reinforced concrete structures

# Prerequisite

18CE220-Engineeirng Mechanics, 18CE420-Structural Analysis

### Course Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Establish the equation of motion and determine the response<br>of single Degree of freedom system under free vibration with<br>or without damping, logarithmic decrement.                         | 20                   |
| CO2          | Determine equation of motion and its response of two Degree<br>of Freedom system under free vibration with or without<br>damping in the system and earthquake excitation                          | 20                   |
| CO3          | Learn the seismology, causes of earthquake and effects of ground motion   | 10                   |
| CO4          | Understand how Seismic Hazard analysis helps to obtain Ground motion parameters   | 10                   |
| CO5          | exercise the procedure for seismic analysis of RC buildings<br>as per IS 1893 :2002 codal provisions and apply the principles<br>of ductile detailing in reinforced concrete structures as per IS | 30                   |

|   |     | 4326 and IS 13920  |    |
|---|-----|--|----|
| I | CO6 | Evaluate Lateral forces due to torsional eccentricity as per IS<br>Codal provisions and also stresses in masonry piers | 10 |

# Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

#### Course Outcome1(CO1):

1. Write the equation governing the vibration of the system as shown in figure-1, formed of point mass attached to the tip of massless clamped beam of length I and bending stiffness EI and a spring with stiffness k.

2. Write the equation motion of the one storey, one bay frame as shown in figure-2.

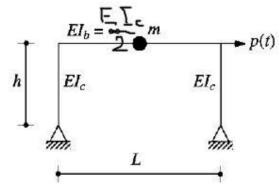

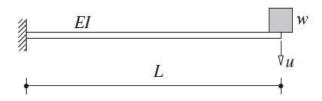

Figure-2

3. Write the equation governing the motion of the system as shown in figure-3, formed of point mass attached to the tip of massless clamped beam of length I and bending stiffness EI and a spring with stiffness k.

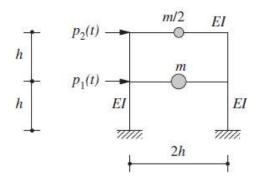

#### Figure-3

#### CourseOutcome2 (CO2):

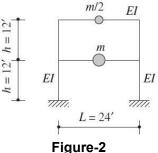

Determine equation of motion and its response of two Degree of Freedom system under free vibration with or without damping in the system and earthquake excitation

 Determine the natural frequencies and modes of the system defined in the figure-1. Express the frequencies in terms of m, EI and h and normalize each mode to unit displacement at the roof and sketch it, identifying all DOFs. [Hint: Given frame is not a shear frame]

#### Figure-1

2. For the two storey shear frame as shown in figure-2 excited by horizontal ground motion  $\ddot{U}_g(t)$ , determine a) the modal expansion of effective earthquake forces b) the floor displacement in terms of Dn(t), c) the story shear in terms of pseudo acceleration. (1 feet = 0.3048m)

#### CourseOutcome3 (CO3):

- 1. What causes the apparently solid and rigid Earth to move and so produce an earthquake?
- 2. How to make buildings ductile for good seismic performance? How buildings twist during earthquake
- 3. How do Beam-Column Joints in RC Buildings Resist Earthquakes?

#### Course Outcome 4 (CO4):

- 1. Define moment magnitude
- 2. Write the steps involved in Deterministic Seismic Hazard Analysis (DSHA)
- 3. Write the steps involved in Probabilistic Seismic Hazard Analysis (PSHA)

#### Course Outcome 5 (CO5):

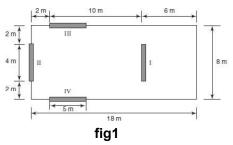

1. For the three storey RCC School building of your choice determine the design seismic loads on the structure by the Equivalent static analysis. The building is located in seismic zone V. The type of soil encountered is medium stiff and it is proposed to design the

building with a special moment resisting frame. The intensity of dead load is 10 kN  $/m^2$  and floors are to cater to an imposed load of 3 kN  $/m^2$ 

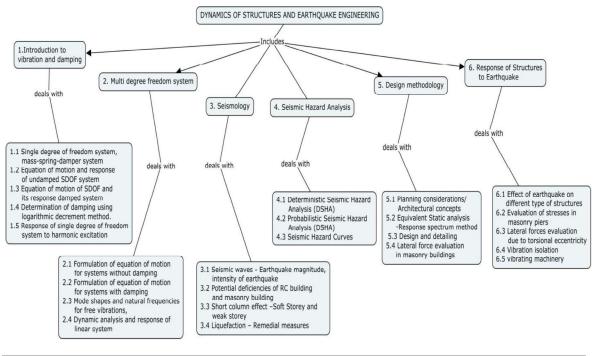

- 2. Design for lintel and Roof band of a single room building of size 6.m x 4m. The walls are 200mm thick in modular bricks built in 1:5 cement sand mortar. The height of building up to lintel level is 3m and the vertical distance between the roof band and lintel band is 1.5m. The roof band weighs 750 kg/m<sup>2</sup>. The bands are required for a design earthquake coefficient of 0.12. Weight of wall is 450 kg/m<sup>2</sup>. Weight of masonry is 1900 kg/m<sup>2</sup>.
- 3. Discuss the ductile detailing requirements as per codal provisions for the columns and beams in RC structures

#### CourseOutcome6 (CO6):

 A simple one storey building having two shear walls in each directions is as shown in fig1.All the four walls are in M25 grade concrete and 200mm thick. The storey height is 3.5m.Degign shear force for the building is 100kNm in either direction. Compute the design lateral forces on different shear walls using the torsion provisions of IS1893(Part I) Assume suitable data if required)

- 2. Write the formula to calculate overturning stresses in masonry piers
- 3. Discuss the effect of earthquake on different type of structures

#### ConceptMap

#### Syllabus

Introduction to vibration and damping, Single degree of freedom system, mass-springdamper system. Free vibration: Formation of equation of motion and response of undamped and damped system, Determination of damping using logarithmic decrement method. Forced vibration: Response of single degree of freedom system to harmonic and periodic excitation of undamped and damped system. Multi degree freedom system: formulation of equation of motion for two/ three degree of freedom systems, finding mode shapes and natural frequencies for free vibrations, damping in structures Dynamic analysis and response of linear system. Seismology Introduction - Seismic waves - Earthquake magnitude, intensity of earthquake, epicentre - Plate tectonics -Seismic Energy -EQ resistance in masonry building -Short column effect -Soft Storey - Centre of stiffness - Centre of mass - liquefaction-Potential deficiencies of RC building and masonry building - Remedial measures -Seismic Hazard Analysis Deterministic Seismic Hazard Analysis (DSHA) - PSHA Design methodology Planning considerations / Architectural concepts as per IS:4326 - 1993 - Guidelines for Earthquake resistant design - Lateral load analysis - Equivalent Static analysis -Response spectrum method as per IS 1893:2002- Design and detailing as per IS:13920 - 1993.Lateral force evaluation in masonry buildings Response Of Structures To Earthquake Effect of earthquake on different type of structures - RCC, Steel and Masonry Structure - Evaluation of stresses in masonry piers -Lateral forces evaluation due to torsional eccentricity -. Vibration isolation – vibrating machinery – vibrating foundation

# Preamble

Prestressed concrete is used extensively in bridges, multistorey buildings and many other important parts of today's modern infrastructure. The inherent weakness of concrete in tension is offset by introducing a pre-compression in a prestressed member, which improves its service load behaviour such as reduced deflections and cracking. An advanced understanding of its behaviour is essential before safe and economical designs can be produced. This course will provide a detailed coverage of the behaviour of prestressed concrete, analysis and design for strength and serviceability of prestressed concrete members, such as beams and slabs including continuous members, and anchorage design and losses in prestress under IS codal provisions.

#### Prerequisite

18CE610 Design of Reinforced Concrete Elements

#### Course Outcomes

| CO<br>Number | Course Outcome Statement   | Weightage***<br>in % |
|--------------|--|----------------------|
| CO1          | Describe the systems and methods of prestressing and its analysis                | 15                   |
| CO2          | Determine the losses of prestress and deflection of prestressed concrete beams   | 15                   |
| CO3          | Analyse and design the prestressed concrete beams and slabs under various forces | 20                   |
| CO4          | Analyse the prestressed concrete continuous beams                                | 10                   |
| CO5          | Analyse and design the circular prestressed concrete members                     | 20                   |
| CO6          | Analyse the composite prestressed concrete members                               | 20                   |

On the successful completion of the course students will be able to

\*\*\* Weightagedepends on Bloom's Level, number of contact hours,

#### Sample Questions for Course Outcome Assessment\*\*

#### Course Outcome 1 (CO1):

- 1. What are the reasons for using high tensile steel wires in prestressed concrete structures?
- 2. Differentiate between pretensioning and post tensioning systems.
- 3. Explain Fressinet system of post tensioning method with neat sketches

Course Outcome 2 (CO2):

1. What are the factors influencing the deflection of prestressed concrete members?

- 2. A prestressed concrete beam 250mm wide and 400mm deep is prestressed by 14 wires each of 7mm diameter initially stressed to 1300 N/mm2 with their centroids located 120mm from the soffit. The span of the beam is 11m. Determine the percentage loss of stress in wires if (a) the beam is pretensioned and (b) the beam is post-tensioned using the following data: relaxation of steel stress = 5% of initial stress, Es=210 kN/mm2, Ec=35 kN/mm2, creep coefficient=1.6 and residual shrinkage strain = 3x10-4 for pretensioning and 2x10-4 for post-tensioning, slip at anchorage=1mm, Frictional coefficient for wave effect=0.0020 per m.
- 3. A prestressed concrete beam spanning over 10m is of rectangular section, 230mm wide and 500mm deep. The beam is prestressed by a parabolic cable having an eccentricity of 150mm below the centroidal axis at the centre of span and an eccentricity of 75mm above the centriodal axis at the support sections. The initial force in the cable is 450 kN. The beam supports an UDL of 15 kN/m. Ec = 38 kN/mm2. Neglecting losses of prestress, a) calculate the short term deflection due to prestress and self weight; b) Allowing for 20 percent loss in prestress, calculate the long term deflection under prestress, self weight and live load, assuming the creep coefficient as 1.80.

#### Course Outcome 3 (CO3):

- 1. What is the formula to find out the ultimate shear resistance of a section uncracked in flexure as per IS code?
- 2. A prestressed concrete beam of rectangular section 150mm x 300mm is prestressed by a straight cable placed at an eccentricity 50mm below the neutral axis carrying an effective prestress of 180 Kn. The beam supports an udl of 18 Kn/m including self-weight. Determine shear resistance of uncracked section at supports and design the shear reinforcement. Take fck=40 Mpa and span=8m.
- Design a simply supported prestressed concrete slab for the following conditions. Span of the slab is 13m. Safe stress in concrete is 14N/mm<sup>2</sup>. Safe stress in steel is 1200N/mm<sup>2</sup>. Super imposed load is 23 kN/m<sup>2</sup>.

#### Course Outcome 4 (CO4):

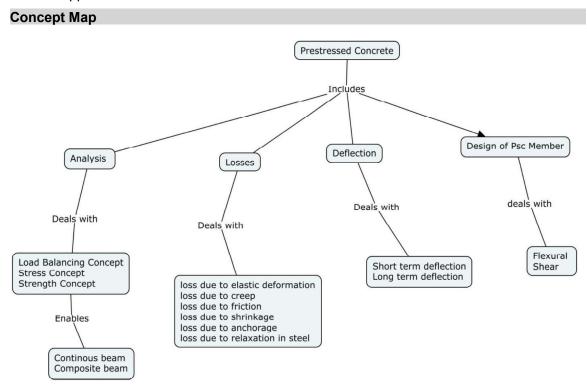

- 1. What is concordant cable profile?
- 2. Explain the concept of linear transformation in prestressed concrete continuous members.
- 3. In two equal span prestressed concrete continuous beam ABC, the tendon has an eccentricity of 0.05m at support A and is bent sharply at a distance of 4m from A having an eccentricity of 0.12m in the span AB below the centre of the beam. And the tendon has an eccentricity of 0.15m at the support B above the centre of the beam. Then the tendon has a parabolic profile for the span BC having mid point eccentricity of 0.15m below the centre of the beam and zero at the support C. Locate the line of pressure (C-line) due to prestress alone. The prestressing force is 1200 kN. Calculate the extreme stresses in concrete at the section over the middle support. The size of the beam is 300mm x 600mm.

#### Course Outcome 5 (CO5):

- 1. Draw the location of P-line and C-line in the prestressed concrete circular water tank.
- A prestressed concrete tank of diameter 10m has to resist an internal pressure head of 4m of water. Design the reinforcement required per metre height and the thickness of concrete required. Take Fc=Ultimate strength of concrete = 40 N/mm<sup>2</sup>, fc=safe stress in concrete=0.5Fc at transfer, fs=1300 N/mm<sup>2</sup>, loss of prestress=20%, m=8.0
- 3. Design a non-cylinder prestressed pipe of 600mm diameter to withstand a working pressure of 1 N/mm<sup>2</sup> and calculate the test pressure required to produce a tensile stress of 0.7 N/mm<sup>2</sup> in the concrete when applied immediately after tensioning.  $F_{et}$ =14 N/mm<sup>2</sup> and k=0.80.

#### Course Outcome 6 (CO6):

- 1. What are the advantages of having prestressed concrete structures in composite construction?
- 2. Explain the analysis of stresses in composite construction with neat sketches.
- 3. Calculate the resultant stress developed in the precast and insitu cast concrete when the beam is propped during the casting of slab. The size of the beam is 150mm x 300mm. Assume the same modulus of elasticity for concrete in precast beam and insitu cast slab. The beam with an effective span of 4.5m is prestressed by tendons with their centroids coinciding with the bottom kern. The initial force in the tendons is 150 kN. The loss of prestress may be assumed to be 18%. The beam is incorporated in a composite T-beam by casting a top flange of breadth 450mm and thickness 50mm. The composite beam supports a live load of 4.5 kN/m<sup>2</sup>.

#### Syllabus

Systems of prestressing and its analysis: Basic concepts of prestressing, need for high strength steel and concrete, advantages, applications, pre-tensioning and post-tensioning systems, partial prestressing; Analysis of prestress -resultant stress at a section - concentric tendon, eccentric tendon, bent tendon, parabolic tendon, pressure line or thrust line, concept of load balancing, cracking moment. Losses of prestress and Deflection of PSC members: Loss due to elastic deformation of concrete, shrinkage of concrete, creep of concrete, relaxation of stress in steel, friction and anchorage; Factors influencing deflection and its importance, short term deflection - tendons of various profile, self weight and imposed loads; long term deflections. Flexural and shear strength of PSC members: IS codal provisions - flexural strength, shear resistance, web shear crack, flexure-shear cracks; Design of sections for flexure and shear; Design of slabs; Design of Anchorage zone using IS and Magnel methods. Continuous PSC members: Advantages, primary moment, secondary moment, resultant moment, pressure or thrust line, line of prestress, concordant cable profile, concept of linear transformation, analysis of two span continuous beams. Circular prestressing: Analysis & design of prestressed concrete pipes, poles and water tanks. Composite PSC members: Types and analysis of composite members, deflection of composite members.

**BRIDGE ENGINEERING** 

| Category | L | Т | Ρ | Credit |
|----------|---|---|---|--------|
| PE       | 3 | 0 | 0 | 3      |

#### Preamble

Bridge is a <u>structure</u> built to <u>span</u> physical obstacles without closing the way underneath such as a <u>body of water</u>, <u>valley</u>, or <u>road</u>, for the purpose of providing passage over the obstacle. There are many different designs that each serve a particular purpose and apply to different situations. Designs of bridges vary depending on the function of the bridge, the nature of the <u>terrain</u> where the bridge is constructed and anchored, the material used to make it, and the funds available to build it. This course offers the design of bridges such as RCC bridges, design principles of steel and prestressed concrete bridges, design principles of substructure and design of different types of bearings as per IRC loadings standards, Indian Railway standards bridge rules and MOST codes. It aims at determination of safe as well as economical section using different kinds of material used in construction and maintenance.

#### Prerequisite

Knowledge of Strength of Materials, Mechanics of Solids, Structural Analysis, Design of RCC, Design of Steel Structures and Prestressed Concrete

#### Course Outcomes

| On the succe | On the successful completion of the course students will be able to              |              |  |  |  |  |  |  |  |

# Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

Course Outcome1(CO1):

Define linear waterway.

- 1. State the minimum width of carriage way for single lane traffic?
- 2. Explain in detail the points to be considered while selecting an ideal bridge site?

#### Course Outcome2(CO2):

- 1. Draw a neat sketch of a bridge and mark all its components, also explain the importance of each component.
- 2. List out the various components of slab culvert.
- 3. Design a deck slab bridge for the following data:

Clear distance between abutments: 7m

| Road             | : NH (Two Lane)                 |
|------------------|---------------------------------|
| Foot path        | : 1m on either side             |
| Width of bearing | : 400 mm                        |
| Wearing coat     | : 80mm average                  |
| Loading          | : IRC Class AA (Tracked)        |
| Materials        | : M30 concrete and Fe 415 Steel |

#### Course Outcome3(CO3):

- 1. Draw the position of IRC class 'AA' Tracked vehicle wheel load for getting maximum bending moment.
- 2. Design the articulation of balanced cantilever bridge of span 70 m, carriage way two lanes, loading class 70R tracked vehicle, Materials: M25 grade concrete and Fe415 steels are used.
- 3. List any two advantages of balanced cantilever bridge.

#### Course Outcome 4 (CO4):

- 1. Draw the neat of truss bridge.
- 2. Explain the loads considered in Railway bridges.
- 3. What are the factors to be considered in selecting paint for steel bridge?

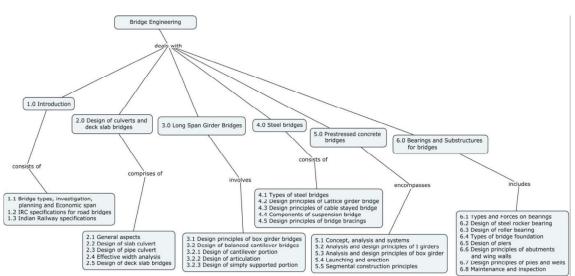

#### Course Outcome 5 (CO5):

- 1. Give the advantages of prestressed concrete bridges.
- 2. Define the terms: Maximum and Minimum prestressing forces.
- 3. Explain in detail in finding the eccentricity of cables in prestressed concrete bridges.

#### Course Outcome6(CO6):

- 1. Write the equation for calculating the scour depth for natural streams in alluvial soil.
- 2. List out the various classification of a fixed bearings.
- 3. Design a R.C rocker bearing to transmit a support reaction of 1000 kN.permissible bearing stress in concrete is 8 Mpa. Use M30 grade concrete and Fe 415 grade steel.

#### **Concept Map**

#### **Syllabus**

**Introduction:** Classification of bridges, investigations and planning, linear water way, economic span length- IRC specifications for road bridges -standard live loads, other forces acting on bridges - Indian Railway codal provisions for broad gauge single line and double line, general design considerations **Design of culverts and deck slab bridges:** General aspects - design of slab culvert - design of pipe culvert- slab design as effective width analysis - design of deck slab bridges for IRC loadings **Long Span Girder Bridges:** Design principles of box girder bridges-design of balanced cantilever bridges - cantilever portion – articulation - simply supported portion **Steel bridges:** Types of steel bridges - design of bridge bracings **Prestressed concrete bridges:** Concept, analysis and systems - analysis and design principles of I girders - analysis and design principles of box type girder - launching and erection details with case studies - segmental construction principles **Bearings and substructures for bridges:** Types of bearings, forces on bearings, basis for selection of bearings - design of steel rocker bearing - design of roller bearing - Types of bridge foundation - design of piers - design principles of abutments and wing walls - piles and wells - general features - maintenance and inspection of bridges.

# Preamble

The conventional design of a structure does not take in to account flaws or cracks in the materials, which largely affect the residual strength of a structure. The aim of this course is to predict the crack front growth and instability under elastic and elasto plastic conditions and to compute the stress intensity factors and stain energy release rate. This course is designed to show how these concepts can be integrated and applied to practical engineering problems using modern computational mechanics techniques.

#### Prerequisite

Mechanics of Materials

#### Course Outcomes

|                      | essiti completion of the course students will be able to                                     |              |

# Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

#### Course Outcome1(CO1):

- 1. What is fracture toughness of a material?
- 2. What are the modes of fracture?
- 3. Draw the standard test specimen for KIC testing

#### Course Outcome2(CO2):

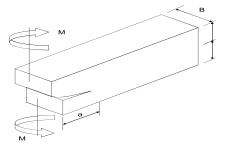

- 1. What is critical stress intensity factor?
- 2. What is j integral?
- 3. What is crack tip plastic zone?

#### Course Outcome3(CO3):

- 1. Discuss the situation under which "K" approach becomes inapplicable.
- 2. Discuss the Stresses due to elliptical hole in a plate.
- 3. Explain Brittle to ductile transition in steel

#### Course Outcome 4 (CO4):

1. Determine the energy release rate for an edge crack loaded as shown in fig.1

#### Figure 1

- 2. By using Westergaard approach evaluate the stresses in the vicinity of crack tip.
- 3. Explain how is the small scale yielding at the crack tip is taken care by Irwin. Illustrate its physical significance.

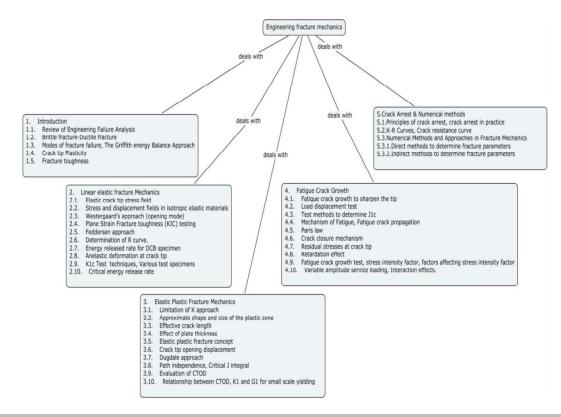

#### Course Outcome 5 (CO5):

- 1. What are the requirements for the crack to advance by R curve concept?
- 2. Explain J integral and Crack growth Resistance curves for ductile and brittle materials
- 3. Why does the Compliance of the component increases with the growth of a crack?

#### Course Outcome6(CO6):

- 1. Determine the energy release rate of DCB specimen through the change in strain energy approach for constant load.
- 2. Discuss elastic and Visco elastic behavior of steel and explain plastic deformation process of steel.
- 3. Draw a neat sketch of CT and SENB specimen as per ASTM Standard and explain the method of precracking in these specimens.

#### **Concept Map**

#### Syllabus

Introduction-Review of Engineering Failure Analysis-Brittle fracture-Ductile fracture, Modes of fracture failure, The Griffith energy Balance Approach-Crack tip Plasticity-Fracture toughness Linear elastic fracture Mechanics-Elastic crack tip stress field Stress and displacement fields in isotropic elastic materials-Westergaard's approach (opening mode)-Plane Strain Fracture toughness (KIC) testing-Feddersen approach, Determination of R curve, Energy released rate for DCB specimen-An elastic deformation at crack tip-K1c Test techniques, Various test specimens-Critical energy release rate Elastic Plastic Fracture Mechanics-Limitation of K approach -Approximate shape and size of the plastic zone-Effective crack length-Effect of plate thickness-Elastic plastic fracture concept-Crack tip opening displacement-Dugdale approach-Path independence, Critical J integral-Evaluation of CTOD-Relationship between CTOD, K1 and G<sub>1</sub> for small scale yielding **Fatigue Crack Growth-**Fatigue crack growth to sharpen the tip, SN curve-methods to determine  $J_{1c}$  Mechanism of Fatigue, Fatigue crack propagation-Paris law-Crack closure mechanism-Residual stresses at crack tip-Retardation effect fatigue crack growth test, stress intensity factor, factors affecting stress intensity factor-Variable amplitude service loading, Interaction effects Crack Arrest & Numerical methods Principles of crack arrest, crack arrest in practice-R Curves, Crack resistance curve, Eutectic process Numerical Methods and Approaches in Fracture Mechanics, Direct methods to determine fracture parameters Indirect methods to determine fracture parameters

# Preamble

This course deals with the various instruments that are used in civil engineering and to expose the students about the significance of measurements and applications. At the end of the course the students will be able to acquire knowledge on various types of measuring instruments used in civil Engineering, understand the principle of operation of measuring instruments, explain the operation of instruments related to static and dynamic measurements, understand the principle of operation of structural measuring instruments.

#### Prerequisite

#### Physics Course Outcomes

#### On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Understand thebasic circuits for measuring instruments  | 15                   |
| CO2          | apply the instrument techniques which is suited for structural related problem in civil engineering | 15                   |
| CO3          | apply seismic instruments for measuring the motion of vibration in structures                       | 25                   |

#### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

#### Course Outcome 1 (CO1):

- 1. Differentiate between Active and Passive types of instrument with examples?
- 2. What is resolution of an instrument?
- 3. Explain any five types of Instruments with examples?

#### Course Outcome 2 (CO2):

- 1. What do you understand by the term transducer, how are they classified?
- 2. Why electrical transducers are more popular as secondary transducers over the mechanical type?
- 3. Explain the principle of operation of piezoelectric transducers. Why their use is limited to the measurement of dynamic quantities only?

#### Course Outcome 3 (CO3):

- 1. Explain with a neat sketch the principle of working of a pneumatic or hydraulic load cell for the measurement of force.
- 2. How are the elastic transducers used for the measurement of force? What secondary transducers are generally employed with elastic transducer?
- 3. What is a proving ring and why is it named so? How can it be used to measure force.

#### Course Outcome 4 (CO4):

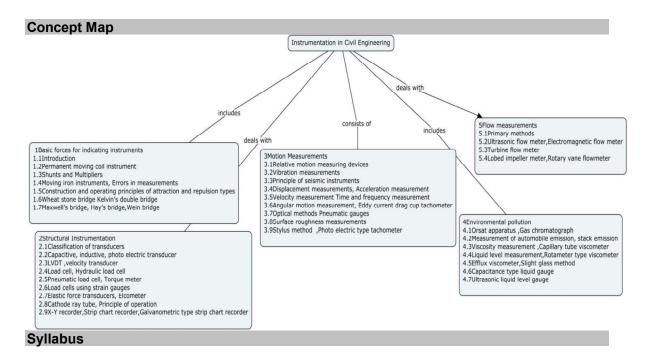

- 1. Enumerate and explain the various methods for the measurement of velocity of flow at a point.
- 2. Sketch and explain the principle of working of,
  - (i) Turbine flow meter
  - (ii) Electromagnetic flow meter.
- 3. Discuss the constant current and constant temperature mode of operation.

#### Course Outcome 5 (CO5):

- 1. Discuss the constant current and constant temperature mode of operation.
- 2. How the anemometer measuring the flow of liquids differs from that used for gases.
- 3. Sketch and explain the principle of working of a hot wire anemometer.

#### Course Outcome6(CO6):

- 1. Explain the principle of operation of Impact Echo method
- 2. Brief how Ground penetrating Radar helps to investigate the failures
- 3. Explain how cracks are determined by using Radiographic testing

# Preamble

The extensive use of reinforced concrete for a variety of structural members has necessitated a proper understanding of the design in structural concrete members by the structural engineers. This course offers analysis and design of reinforced concrete structures like deep beams, corbels, curved beams, shear wall, bunkers and silos, virendeel girders, poles, pipes, formworks and concrete trusses as per IS specifications. It also aims at determination of safe as well as economical sections and their reinforcement under various types of loading. At the end of the course, student has a comprehensive design knowledge related to structures and systems that are likely to be encountered in professional practice.

#### Prerequisite

18CE610 Design of Reinforced Concrete Elements Course Outcomes

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Design special elements such as deep beams, corbels and curved beams and detail the reinforcement | 20                   |
| CO2          | Design special elements such as shear wall and bunkers and silos and detail the reinforcement     | 20                   |
| CO3          | Design special elements such as Virendeel girders and poles and detail the reinforcement          | 15                   |
| CO4          | Design reinforced concrete pipes under various types of loading and detail the reinforcement      | 15                   |
| CO5          | Design formworks for column, beam and floor slab and detail the reinforcement                     | 15                   |
| CO6          | Analyse and design the concrete trusses and detail the reinforcement                              | 15                   |

On the successful completion of the course students will be able to

\*\*\* Weightagedepends on Bloom's Level, number of contact hours,

#### Sample Questions for Course Outcome Assessment\*\*

#### Course Outcome 1 (CO1):

- 1. Define the term: Deep beam.
- Make use of M25 and Fe415 as materials, design the reinforcement required for a single span deep beam having effective span = 8m; Overall depth = 7m; Width of support = 0.45m; Width of beam = 0.45m; Total load on beam including self weight = 550 kN/m; Draw the reinforcement details of the beam.
- 3. Analyse and design a corbel for a 350mm square column to support an ultimate vertical load of 600kN with its Line of action 200mm from the face of the column. Use M20 grade concrete and Fe 415 grade steel. Sketch the reinforcement details.

Course Outcome 2 (CO2):

- 1. What are the differences between bunkers and silos?
- Make use of limit state method; design a circular cylindrical bunker to store 20 tonnes of coal. Density of coal is 9 kN/m3. Angle of repose is 30 degrees. Use M20 and Fe415 as materials. Sketch the reinforcement details of bunker.
- 3. A plain traced concrete wall of dimensions 8 m high, 6 m long and 200 mm thick is restrained against rotation at its base and unrestrained at the ends. If it has to carry a factored total gravity load of 200 kN and a factored horizontal load of 8 kN at top. Check the safety of the wall. Assume M25 and Fe500. Draw the reinforcement details.

#### Course Outcome 3 (CO3):

- 1. What are the different methods adopted for the analysis of virendeel girders?
- 2. A virendeel girder of 9m has 3 bays of 3m each. The height of the verticals is 3m. The girder supports concentrated loads of 100 kN and 50 kN at the interior node points of the top dome. Assuming constant stiffness for the members, compute the moments forces in the girder.
- 3. A reinforced concrete pole 10m long is required to carry 4 conductors of 7mm diameter each spaced at 500mm intervals in a cross arm fixed at 600mm from the top. The depth of embedment is 1.8m, below ground level. Spacing of poles is 50m. Wind pressure is 1.5 kN/m<sup>2</sup>. Load factor is 2.5. Tension in conduction is 3 kN. Make use of M20 and Fe415 as materials design suitable pole for the transmission line.

#### Course Outcome 4 (CO4):

- 1. What are the classifications of pipes?
- 2. Make use of permissible stress in concrete and steel of 2.8 N/mm<sup>2</sup> and 150 N/mm<sup>2</sup> respectively, design a pipe against hoop tension having internal diameter of 1750mm and is subjected to a water pressure of 13m of head of water. Assume the pipe is supported at GL at its horizontal diameter.
- 3. A reinforced concrete pressure pipe is to be designed to withstand a working pressure of 0.2 kN/m<sup>2</sup>. The internal diameter of the pipe is 1000mm and the length of the pipe is 3m. Make use of M20 and hard drawn steel wire conforming to IS 432 as materials design the pipe and sketch the details of reinforcements.

#### Course Outcome 5 (CO5):

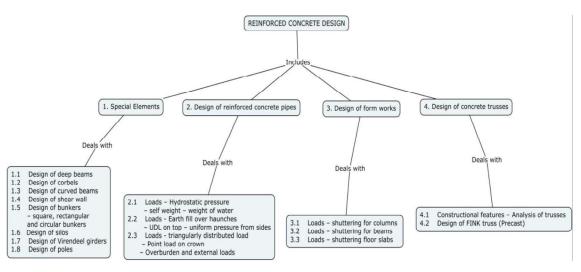

- 1. Draw the cross section and sectional elevation of formworks for column and beam and slab and its shuttering details.
- Make use of IS codal provisions, design the formwork for the slab floor only for the following data: Thickness of floor = 125mm; Centre to centre spacing of beams = 3.5m; Width of beam = 250mm; Take a live load on sheathing = 3 kN/m<sup>2</sup>; weight of wet concrete as 28.5 kN/m<sup>3</sup>.

3. Make use of IS codal provisions, design the formwork for a column 230mm x 230mm, having a height of 1.2. It is proposed to pour the entire concrete in one stage.

#### Course Outcome 6 (CO6):

- 1. Draw the cross section of various types of concrete trusses.
- 2. Explain the analysis of trusses.
- Make use of M20 and Fe415 as materials; design a reinforced concrete fink type truss to suit the following data. Span of truss: 25m. Spacing of trusses: 5m. Central rise of truss: 4.13m. It is used to support concrete purlins at intervals of 1.35m and asbestos sheets cover roof. Sketch the details of reinforcement details of members of truss.

#### Concept Map

#### Syllabus

**Design of Special Elements**:Deep beams, corbels, curved beams, shear wall, bunkers – square, rectangular and circular bunkers;silos, virendeel girders and poles; Reinforcement detailing.**Design of reinforced concrete pipes**: Under hydrostatic pressure, self weight, weight of water, earth fill over haunches, UDL on top, uniform pressure from sides, triangularly distributed load, point load on crown, Overburden and external loads; Reinforcement detailing.**Design of form works**: Shuttering for columns, beams and floor slabs; Detailing of form works. **Design of concrete trusses**: Constructional features, analysis of trusses, design of FINK truss (Precast); Reinforcement detailing.

# Preamble

Solid waste management has been one of the significant issues to be addressed by the urban local body which is responsible for providing basic service to the people. Due to the rapid urbanisation it is difficult to manage the huge quantity of waste generated from the community. So it is necessary and atmost priority to provide a viable solution to tackle the challenge. This course provides an in-depth understanding of solid waste characteristics and management. The students acquire proficiency in processing and safe disposal of municipal solid waste generated by a community.

#### Prerequisite

NIL

#### Course Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Explain the various functional elements involved in solid waste management system | 10                   |
| CO2          | Quantify and classify the solid wastes generatedfrom a community.                 | 20                   |
| CO3          | Analyze the collection route and collection system                                | 15                   |
| CO4          | Select suitable waste processing technologies and disposal methods                | 25                   |
| CO5          | Analyse the options to recover energy from waste generated                        | 15                   |
| CO6          | Design a suitable sanitary landfill for disposal of solid waste on land           | 15                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

#### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

#### Course Outcome1(CO1):

- 1. List the essential functional elements in MSW.
- 2. Explain the concept of Integrated Solid Waste Management?

#### Course Outcome2(CO2):

- 1. Describe the sampling procedure for the characterisation of the solid waste.
- 2. List the chemical characteristics of Municipal Solid Waste.

#### Course Outcome3(CO3):

- 1. State the factors to be considered while finalizing the collection route.
- 2. Write down the factors influencing the selection of location for transfer station.
- 3. List and discuss the types of containers and collection vehicles used for solid waste management.

#### Course Outcome 4 (CO4):

1. Composting is a sustainable option for biodegradable solid waste-Justify.

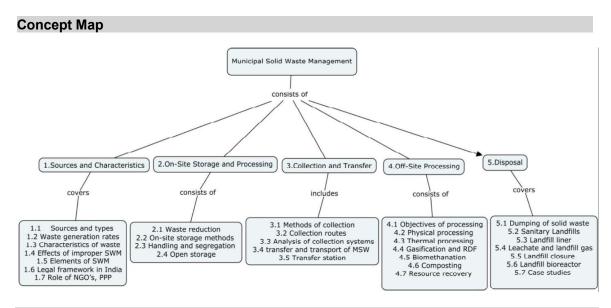

2. Compare the environmental effects of composting and bio-gasification.

#### Course Outcome 5 (CO5):

- 1. Assess the energy generation potential of MSW.
- 2. Assess the techno-economic viability of thermal processing techniques.

#### Course Outcome6(CO6):

- 1. Suggest the best disposal option for the municipal solid waste generated from your locality.
- 2. Discuss the various issues faced by municipal authorities in identifying the disposal site.
- 3. Do you think a sanitary landfill is possible to manage wastes in your locality? List at least three reasons to support your answer.

#### Syllabus

Sources and Characteristics: Sources and types of solid waste; Waste generation rates and factors affecting generation; Method of sampling and characteristics of waste; Effects of improper Solid Waste Management; Elements of Solid Waste Management; Legal framework for Solid Waste Management in India; Integrated Solid Waste Management. On-Site Storage and Processing: Source reduction of waste and 3 R's concept for waste reduction: On-site storage methods and materials used for containers; Handling and segregation of waste at source; Public health and economic aspects of open storage. Collection and Transfer: Methods of collection of waste; Collection vehicles, manpower and collection routes & their optimization; Analysis of collection systems; Need for transfer and transport of MSW; Transfer station- Selection of location, operation and maintenance. Processing: Objectives of MSW processing: Physical processing techniques and equipment; Thermal processing options; Biological conversion technologies; Resource recovery from solid waste- Case studies on Indian conditions. Disposal: Dumping of solid waste and its effects on environment; Sanitary Landfillssite selection; Design and Operation- Landfill liner; Management of leachate and landfill gas; Landfill closure and environmental monitoring; Landfill bioreactor; Dumpsite rehabilitation; Case studies on developed and developing countries.

Air and Noise Pollution Management

| Category | L | Т | P | Credit |
|----------|---|---|---|--------|
| PE       | 3 | 0 | 0 | 3      |

#### Preamble

This course work offers the basic knowledge on various sources of air pollutants and their possible effects on local, regional and global environment. It provides various techniques for sampling and methods for analysing the pollutants. Also, it deals with the principles and design for control of particulate/gaseous air pollutants and its emerging trends to fulfil the legal aspects of air pollution. In addition, this course imparts knowledge about the fundamental theory of sound, noise pollution sources with its effects and control techniques.

#### NIL

#### Course Outcomes

On the successful completion of the course students will be able to

| CO's | Course Outcome Statement   | Weightage***<br>in % |
|------|--|----------------------|
| CO1  | Identify the sources and effects of air pollution with pollutants sampling techniques and measurements   | 20                   |
| CO2  | Show the significance of meteorological factors in dispersion<br>of pollutantsand forecast the pollutant concentration at some<br>distance downwind. | 20                   |
| CO3  | Apply suitable preventive and control measures for abatement of air pollution.   | 20                   |
| CO4  | Identify suitable locations for citing of industries with appropriate air pollution management strategy.   | 20                   |
| CO5  | Identify the sources of noise and its effect on human beings, animals, plants and materials  | 10                   |
| CO6  | Produce appropriate noise control measures   | 10                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

#### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

#### Course Outcome1(CO1):

- 1. Define Air Pollution.
- 2. Name some Green House Gases.
- 3. Explain the classification of Air Pollutants.

# Course Outcome2(CO2):

- 1. Define Plume.
- 2. Demonstrate, how prevailing lapse rate affect the plume behaviour from a stack.
- 3. Summarize various meteorological factors that affect the transport process of air pollutants.

#### Course Outcome3(CO3):

- 1. Explain the working principle of an ESP and state the factors governing its performances.
- 2. Explain the control strategies in automotive pollution.
- 3. Identify the various possible source reduction methods in the control of air pollution.

#### Course Outcome 4 (CO4):

- 1. Describe master plan of a city.
- 2. Identify the criteria for citing of industries at a place in a city.
- 3. Explain the relevance of wind rose diagram for citing of an industry.
- 4. Illustrate how planning of a city helps in air pollution management.

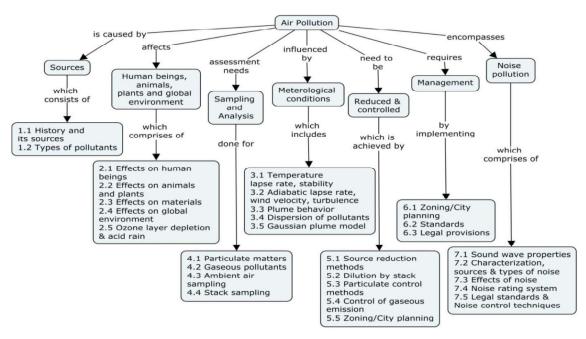

#### Course Outcome 5 (CO5):

- 1. Explain the properties and characteristics of sound.
- 2. Define noise pollution.
- 3. Explain the impacts of noise on human beings.

#### Course Outcome6(CO6):

- 1. Identify the techniques for abatement of noise in transportation sector.
- 2. Explain the control methods for reduction of noise from source, path and by receiver.
- 3. Describe noise preventive measures to be undertaken by an occupational worker.

#### Concept Map

#### Syllabus

**Introduction to Air pollution**– Particulates and Gaseous pollutants - sources, classification and types of air pollutants, Effects and Impacts of Air pollution on environment; Sampling and Analysis techniques. **Meteorological factors** – Dispersion, factors affecting dispersion, Plume rise & behaviour and Modelling techniques; **Reduction and control methods** – source reduction and by equipment control; Automotive pollutions control; **Air pollution management** - Air quality standards, emission standards, indices, industrial plant locations, city planning, air pollution legislation and regulations – air pollution survey; **Noise pollution**– Properties& Characteristics of sound waves; Noise sources, effects; Hearing - mechanism, impairment, speech interference, sleep interference; Noise rating system; Standards for ambient and workspace noise levels, Noise control techniques at source, transmission path &at receiver end.

## Preamble

The objective of this course is to provide knowledge on remote sensing of objects on the earth surface using EMR waves with its object response spectral characteristics. This course also highlight the types of platforms like satellites used for remote sensing with image processing techniques and multi level data integration through GPS for real world applications.

#### Prerequisite

Fundamental of Physics, Mathematics, Geography, Geology and Surveying

#### Course Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement   | Weightage***<br>in % |
|--------------|--|----------------------|
| CO1          | Understand the fundamentals of radiation & EMR and its characteristics.    | 15                   |
| CO2          | Understand various types of platforms and sensors used for remote sensing. | 15                   |
| CO3          | Understand the process of image processing and interpretation techniques.  | 15                   |
| CO4          | Apply knowledge of satellites on various Civil Engineering applications    | 20                   |
| CO5          | Illustrate multi level data integration methods for mapping                | 15                   |
| CO6          | Apply knowledge of GPS for real time scenarios                             | 20                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours.

#### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

#### Course Outcome1(CO1):

- 1. Define Remote Sensing
- 2. Recall Plank's law and black body radiation.
- 3. Describe Spectral Reflectance

#### Course Outcome2(CO2):

- 1. Recall various remote sensing platforms used to obtain image of earth
- 2. Describe various types of sensors.
- 3. Describe the importance of sensors resolutions in data interpretation.

#### Course Outcome3(CO3):

- 1. Explain vector and raster data
- 2. Discuss the process of interpretation of images
- 3. Discuss the radiation principles and its application in remote sensing data capturing.

#### Course Outcome 4 (CO4):

- 1. Describe the history of Indian space programmes
- 2. Illustrate the application of various satellites with its resolution

3. Discuss CARTOSAT and RESOURSESATsatellites sensor characteristics.

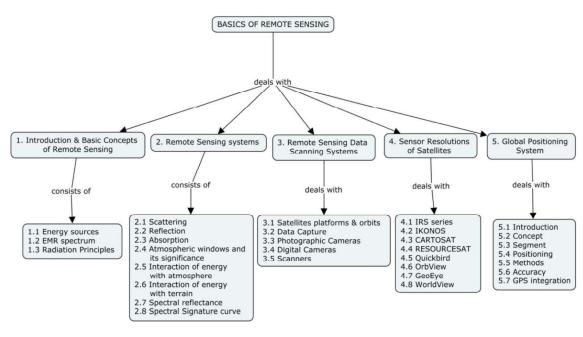

#### Course Outcome 5 (CO5):

- 1. Discuss the need for multi seasonal data for LULC analysis
- 2. Describe the application of multi stage and multi platform imaging
- 3. Describe DEM/DTM models.

## Course Outcome6(CO6):

- 1. Define GIS and GPS.
- 2. List the important types of GPS.
- 3. Describe various segments of GPS and its importance.

#### **Concept Map**

#### Syllabus

Introduction and Basic Conceptsof Remote Sensing–Sources - EMR spectrum - Radiation Principles Remote Sensingsystems- Scattering – Reflection – Absorption - Atmospheric windows and its significance – Interaction of energy with atmosphere – Interaction of energy with terrain. Spectral Reflectance – Spectral Signature curve. Remote Sensing Data Scanning Systems-Satellites platforms and orbits -Data Capture. Photographic Cameras - Digital Cameras –Scanners Sensor Resolutionsof Satellites– IRS series – IKONOS, CARTOSAT – RESOURCESAT, Quickbird, OrbView, GeoEye, WorldView.Global Positioning System– Introduction– Concept - Segment - Positioning – Methods – Accuracy- GPS integration.

# Preamble

Any developmental project will have impacts on the physical, social and biological environment. Some impacts are beneficial and some are adverse. EIA is important because it identifies the likely environmental, economical and social burden of the project at the initial phase of the project and informs the decision-makers about the significant impacts and risks associated with the project to promote sustainable development by ensuring the balance between environment and development.

#### Prerequisite

NIL

| Origination             | -   |

#### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

#### Course Outcome1(CO1):

- 1. Discuss the role of Public Participation in Environmental Decision Making.
- 2. EIA is an effective management tool: comment
- 3. Explain the various methodologies adapted for prediction of impacts for EIA report

#### Course Outcome2(CO2):

- 1. Explain the legal framework for getting environment clearance for new projects.
- 2. Describe the procedure for conducting the public hearing as per EIA notification 2006.
- 3. Explain the legal framework for handling hazardous waste generated from any industry

#### Course Outcome3(CO3):

1. Prepare terms of reference for coal based Thermal Power Plant having a capacity of 2x330 MW which is located at Nagapattinam district.

- 2. In Madurai it is propose to develop a CETP for 20 Electroplating units. Identify the potential impacts of the project and prescribe suitable terms of reference for the project.
- 3. It is proposed to construct a large hydro-electric power project at the foot hills of Varusanaadu. Prepare terms of reference for the socio-economic impacts.

#### Course Outcome 4 (CO4):

- 1. Give an overview of models applied for the assessment of impact on groundwater.
- 2. List the software available for the assessment of impact on the environment.
- 3. Expert system is an appropriate tool to assess the environmental impact. Justify the satetement.

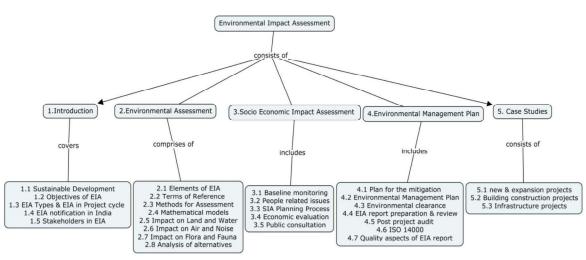

#### Course Outcome 5 (CO5):

- 1. Pudur is a town located along the OMR road. It is proposed to construct 6000 No. of residential houses in that area. Identify the potential impacts of the project and suggest a management plan to mitigate them.
- 2. Sabarimalai is a pilgrimage town located in Kerala state. It is proposed to develop a Greenfield airport project for the capacity to handle six new generation large aircraft. Identify the potential impacts of the project and suggest a management plan to mitigate them.
- 3. Prepare risk assessment report for a stand-alone distillery unit having a capacity of 50 klpd. The raw material is sugarcane based molasses. Identify the potential impacts and prepare mitigation plan for the same.

#### Course Outcome6(CO6):

- 1. Describe the essential contents of a typical environmental management plan.
- 2. Outline the chapters specified by the ministry for the preparation of the EIA report in India.

#### **Concept Map**

#### Syllabus

**Introduction:** Impact of Development on Environment-Sustainable Development-Historical Development and Objectives of EIA-EIA Types & EIA in Project cycle-EIA notification & Legal framework in India. **Environmental Assessment:** Elements of EIA-Terms of Reference & Baseline monitoring-Methods for Assessment – Applicability-Mathematical models for Impact Prediction-Prediction and Assessment of impact on Land, Water, Air, Noise, Flora and Fauna-Analysis of alternatives. **Socio Economic Impact Assessment:** Baseline monitoring of Socio Economic environment-Project affected people related issues-SIA Planning Process-Cost Benefit Analysis - Economic evaluation-Public consultation. **Environmental Management Plan**: Plan for the mitigation of impact on environment-Environmental Management Plan-

Environmental clearance-EIA report preparation & review-Post project audit & Environmental audit-ISO 14000-Quality aspects of EIA report. **Case Studies:** EIA for new & expansion projects, Building construction and area development projects, Infrastructure projects.

- 2. Lawrence, D.P., Environmental Impact Assessment Practical Solutions to recurrent problems, Wiley-Interscience, New Jersey, 2003.
- 3. Petts, J., Handbook of Environmental Impact Assessment, Vol., I and II, Blackwell science, London, 1999.
- 4. World Bank Source Book on EIA.

#### **Course Contents and Lecture Schedule**

| Module<br>No. | Topic  | No. of<br>Hours | Course<br>Outcome |
|---------------|--|-----------------|-------------------|
| -             | 1.Introduction   |                 |                   |
| 1.1           | Impact of Development on Environment-Sustainable Development | 1               | CO1               |
| 1.2           | Historical Development and Objectives of EIA                 | 1               | CO1               |
| 1.3           | EIA Types & EIA in Project cycle                             | 1               | CO1               |
| 1.4           | EIA notification & Legal framework in India                  | 1               | CO1               |
| 1.5           | Stakeholders & their role in EIA                             | 1               | CO1               |
|               | 2.Environmental Assessment                                   |                 |                   |
| 2.1           | Elements of EIA  | 2               | CO2               |
| 2.2           | Terms of Reference & Baseline monitoring                     | 1               | CO3               |
| 2.3           | Methods for Assessment-Applicability                         | 2               | CO2               |
| 2.4           | Mathematical models for Impact Prediction                    | 1               | CO4               |
| 2.5           | Prediction and Assessment of impact on Land and Water        | 1               | CO4               |
| 2.6           | Prediction and Assessment of impact on Air and Noise         | 1               | CO4               |
| 2.6<br>2.7    | Prediction and Assessment of impact on Flora and Fauna       | 1               | CO4               |
| 2.8           | Analysis of alternatives                                     | 1               | CO2               |
|               | 3.Socio Economic Impact Assessment                           |                 |                   |
| 3.1           | Baseline monitoring of Socio Economic environment            | 1               | CO3               |
| 3.2           | Project affected people related issues                       | 1               | CO2               |
| 3.3           | SIA Planning Process   | 2               | CO2               |
| 3.4           | Cost Benefit Analysis - Economic evaluation                  | 1               | CO5               |
| 3.5           | Public consultation  | 1               | CO3               |
|               | 4.Environmental Management Plan                              |                 |                   |
| 4.1           | Plan for the mitigation of impact on environment             | 3               | CO5               |
| 4.2           | Environmental Management Plan                                | 1               | CO5               |
| 4.3           | Environmental clearance                                      | 1               | CO3               |
| 4.4           | EIA report preparation & review                              | 1               | CO6               |
| 4.5           | Post project audit & Environmental audit                     | 1               | CO5               |
| 4.6           | ISO 14000  | 1               | CO5               |
| 4.7           | Quality aspects of EIA report                                | 1               | CO6               |
|               | 5. Case Studies  |                 |                   |
| 5.1           | EIA for new & expansion projects                             | 2               | CO5               |
| 5.2           | EIA for Building construction and area development projects  | 2               | CO6               |

| 5.3 | EIA for Infrastructure projects | 2 | CO6 |

#### DISASTER MITIGATION AND MANAGEMENT

| Category | L | Т | Ρ | Credit |
|----------|---|---|---|--------|
| PE       | 3 | 0 | 0 | 3      |

# Preamble

This course deals with the various disasters and their effects against built structures, and Hazard Assessment procedure in India. This course also deals with the methods of mitigating various hazardssuch that their risk and impact on communities is reduced.

#### Prerequisite

NIL

# Course

#### Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement   | Weightage***<br>in % |
|--------------|--|----------------------|
| CO1          | Understand the various types of manmade and natural hazards and disaster                   | 10                   |
| CO2          | apply the disaster resistant principle to the deficient buildings against natural disaster | 30                   |
| CO3          | apply the risk reduction technique involved in manmade disaster                            | 30                   |
| CO4          | Apply the vulnerability reduction technique adopted by NDRF, State and local bodies        | 10                   |
| CO5          | Apply the hazard assessment procedure to the existing buildings                            | 10                   |
| CO6          | Apply the alternative communication technique during the disaster                          | 10                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

| Perception              | -   |
| Set                     | -   |
| Guided Response         | -   |
| Mechanism               | Assignment                                  |
| Complex Overt Responses | -   |
| Adaptation              | -   |
| Origination             | -   |

#### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

#### Course Level Learning Objectives

#### Course Outcome (CO1)

- 1. What is Richter Magnitude?
- 2. What is Peak ground Acceleration?
- 3. What is meant by hazard mitigation?

#### **Course Outcome (CO2)**

- 1. List the different types of droughts and highlight its various causes.
- 2. Define community Contingency Plan
- 3. How does the site soil affect the EQ response of structures?

#### Course Outcome (CO3)

- 1. Explain the plan, Mass and Geometric irregularities in the RC buildings. How these irregularities adversely affect the performance of the RC buildings during Earthquake
- 2. Discuss the various types of natural disasters and highlight the specific efforts to mitigate disasters in India

#### **Course Outcome (CO4)**

1. Describe various types of hazards and impacts associated with earthquakes and highlight the lessons learnt

2. Briefly explain the components of follow-up activities in psychological rehabilitation of disaster affected people.

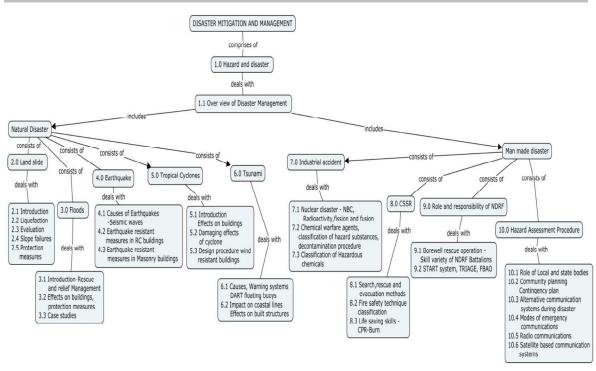

#### **Course Outcome (CO5)**

- 1. If you were the relief commissioner of the state of Assam which is affected by floods every year list out five departments that you need to contact.
- 2. Identify four different task forces and list out two responsibilities of each of the task forces
- 3. Do you think disaster risk can be reduced through community participation? Discuss

#### Course Outcome (CO6)

- 1. Which areas are more prone to heat and cold waves in India? Discuss the preventive and preparedness measures that are mostly adopted for protection from heat and cold waves
- 2. Explain the role of central Government in responding to disasters
- 3. Describe suitable mitigation and preparedness measures that the community should take in advance to guard a EQ disaster occurring again.

#### **Concept Map**

#### Syllabus

**Hazard and disaster** -Overview –Types of disasters-Phases of disaster Management -Classification of Hazards - Manmade and Natural disaster **Natural disaster-Earthquake** -Causes -Classification of Earthquakes – Magnitude and intensity - Potential deficiencies of RC and Masonry buildings -EQ resistant measures - **Landslides** -Causes – slopes failure -Preparation of zoning map -Liquefaction potential evaluation -Protection measures **Floods** – Flood zone map - Effects on buildings – protection measures from damage to buildings – Mitigation Strategies **Tropical cyclones** – stages of cyclone warning systems in India - Effects on buildings – protection measures from damage to buildings **Tsunami** - Warning systems DART floating bouys -Tsunami impact on coastal lines -Effects of Tsunami on built structures – Mitigation Management**Manmade disaster - Nuclear disaster** – NBC, Radioactivity, Alpha ,Beta , Gamma decay, fission and fusion Chemical warfare agents, universal classification of hazard substances and explosives, decontamination procedure - BW agents -Emergency Medical responder, Vital signs (RPSPBP) Classification of Hazardous chemicals **chemical and industrial accidents** – case histories Mitigation strategies **CSSR -Collapsed Structure & Rescue operations -** Search and rescue and evacuation methods - Life saving skills - Body mechanics – CPR **Fire** safety technique classification -Extinguishers- Burn and its classification **Borewell rescue operationRole and responsibility of NDRF** - Skill variety of NDRF Battalions-MFR-FRRM, CBRN disasters - START system, TRIAGE, FBAO (Foreign body airway Obstruction) **Role of local and state bodies** National level, State level, district level -Community contingency plan –Risk Management - Vulnerability mapping.**Hazard Assessment** -Vulnerability Assessment of Buildings procedure - Visual Inspection Detailed In - situ Investigation Planning and Interpretation of Results – Pushover Analysis **Alternative communication systems during disaster-** Modes of emergency communications-Satellite based communication systems -Radio communications

#### Preamble

The objective of this course is to introduce the principles, methods and practices of well hydraulics and concept of ground water management. It also emphasise the need for protecting ground water resources from contamination and Planning of groundwater development under various conditions and constraints.

#### Prerequisite

Nil

#### Course Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement                                   | Weightage***<br>in % |
|--------------|--|----------------------|

# Sample Questions for Course Outcome

#### Course Outcome1(CO1):

- 1. Derive an expression for the steady state discharge of well fully penetrating into a confined aquifer.
- 2. In a water table aquifer of 50m thickness, a 20cm diameter well is pumped at a uniform rate of 0.05m<sup>3</sup>/s. If the steady state drawdown measured in the observation wells located at 10m and 100m distances from the well are 6.5m and 0.25m respectively, determine the hydraulic conductivity of the aquifer.

#### Course Outcome2 (CO2):

- 1. Explain the various practices followed in India for the development of ground water resources.
- 2. A Sample has a hydraulic conductivity of 15m per day what would be its intrinsic permeability. Estimate its hydraulic conductivity at 30° C.

#### Course Outcome3 (CO3):

- 1. Discuss the difference between confined aquifer and unconfined aquifer.
- 2. Explain the general characteristics of Aquiclude and Aquitard.

#### Course Outcome 4(CO4):

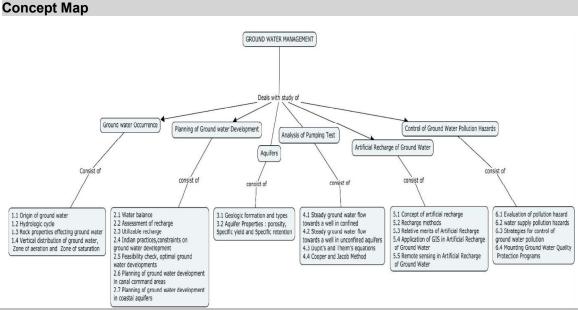

- 1. List out the advantages of pumping test?
- 2. Determine the yield from a 30cm diameter well under a draw down of 10m in the well, if the radius of influence and hydraulic conductivity are 150m and 5m per day respectively. The aquifer is unconfined with a thickness of 60m.

#### Course Outcome 5(CO5):

- 1. Explain the various methods of Artificial Recharge of Ground water.
- 2. How do apply Remote sensing and GIS for augmentation of ground water storage.

#### CourseOutcome 6 (CO6):

- 1. List out the advantages of ground water compared to surface water?
- 2. How do you apply the various methods to control pollution hazards in ground water?

#### Syllabus

**Ground water Occurrence:** Origin of ground water, hydrologic cycle, rock properties effecting ground water, vertical distribution of ground water, zone of aeration and zone of saturation. **Planning of Ground water Development:** Water balance, assessment of recharge, utilizable recharge, Indian practices, constraints on ground water development, feasibility check, optimal ground water developments, planning of ground water development in canal command areas, planning of ground water development in coastal aquifers. **Aquifers:** Geologic formation, types, porosity, Specific yield and Specific retention. **Analysis of Pumping Test :** Steady ground water flow towards a well in confined and unconfined aquifers, Dupit's and Theim's equations, Cooper and Jacob Method. **Artificial Recharge of Ground Water:** Concept of artificial recharge, Recharge methods, Relative merits, Application of GIS and Remote sensing in Artificial Recharge of Ground Water Pollution Hazards: Evaluation of pollution hazard and water supply pollution hazards. Strategies for control of ground water pollution. Mounting Ground Water Quality Protection Programs.

#### Learning Resources

- 1. Ground water Hydrology by David Keith Todd, John Wiley &son, New York, Third revised edition(2005)
- 2. Groundwater by H.M.Raghunath, Wiley Eastern Ltd.(1 December 2007)
- 3. Groundwater system planning & management- R.Willies &W.W.G.Yeh,Printice Hall (1987).
- 4. Apply Hydrogeology by C.W.Fetta, CBS Publishers & Distributers (2019).

#### Preamble

This course provides an in-depth knowledge of various types of waste, their characteristics, technology and management for the safe disposal of waste generated by a community. This course will also highlight the economic feasibility, legal framework and viability of environmentally sustainable technologies for waste management.

#### Prerequisite

NIL

#### Course Outcomes

#### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

#### Course Outcome1(CO1):

- 1. Explore the present challenges in the waste management in India.
- 2. Environmental management system is a step towards effective management-Justify this statement.

#### Course Outcome2(CO2):

- 1. List the essential functional elements in Municipal Solid Waste Management.
- 2. Do you think a sanitary landfill is possible to manage wastes in your locality? List at least three reasons to support your answer.

#### Course Outcome3(CO3):

- 1. Compare the environmental effects of composting and bio-gasification.
- 2. Assess the energy generation potential of Municipal Solid Waste.

#### Course Outcome 4 (CO4):

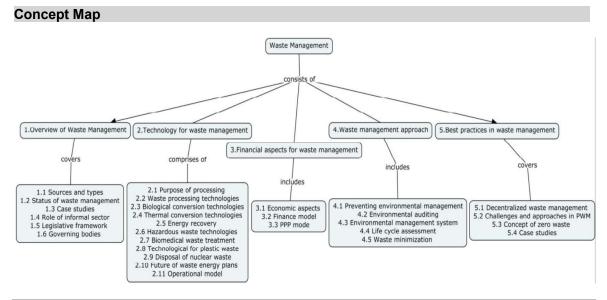

- 1. Discuss the benefits of Environmental Auditing.
- 2. Explore any three possible ways to reduce the waste at source in daily life

#### Course Outcome 5 (CO5):

- 1. Explain the economic aspects of Waste Management?
- 2. List the characteristics of Hazardous Waste.

#### Course Outcome6(CO6):

- 1. Suggest the best disposal option for the hazardous waste generated from your locality.
- 2. Discuss the various issues faced by municipal authorities in identifying the disposal site.

#### Syllabus

**Overview of Waste Management:** Sources and types of waste; Status of waste management; Environmental challenges of Waste Management; Role of informal sector Legislative framework; Governing bodies and organizational structure of responsible authorities. **Technology for waste management:** processing technologies; Biological and thermal conversion technologies; Energy recovery from conversion products; Hazardous waste Biomedical waste and plastic waste treatment; Disposal of nuclear waste. **Understanding finance for waste management:** Decentralized waste management concept; Economic aspects of waste management; Finance plan for waste management- PPP model-case studies. **Waste management approach:** Preventing environmental management; Environmental auditing; Environmental management system- ISO14001;Life cycle assessment; Waste minimization and 3R concept. **Best practices in waste management:** Challenges and approaches in plastic waste management; Concept of zero waste management; Case studies.

# Preamble

This course deals with the different methods adopted for improving the properties of remoulded and in-situ soils by techniques such as in- situ densification, consolidation and dewatering. This course enables the graduates to understand how reinforced earth walls can obviate the problems associated with conventional retaining walls. Also the graduates are exposed to the concepts of grouting, soil stabilization and the use of geotextiles to improve the engineering performance of soils.

#### Prerequisite

18CE520 - Soil Mechanics; 18CE620 – Foundation Engineering **Course Outcomes** 

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement   | Weightage<br>in % |
|--------------|--|-------------------|
| CO1          | Understand the role of ground improvement and select appropriate ground improvement technique for the given subsoil condition. | 10                |
| CO2          | Suggest appropriate dewatering technique for lowering the ground water table   | 20                |
| CO3          | Recommend suitable techniques for densifying cohesionless soil deposits  | 15                |
| CO4          | Suggest appropriate techniques for improving cohesive soil deposits  | 15                |
| CO5          | Perform simple design of reinforced earth walls and illustrate the role of geo-textile in ground improvement                   | 20                |
| CO6          | Explain the concept of grouting and soil stabilization for improving the engineering performance of soils.                     | 20                |

| Create              |            |                     |       |    |           |                         |             |

#### Assessment Pattern: Psychomotor

| Psychomotor Skill       | Miniproject/Assignment/Practical Component |
|-------------------------|--|
| Perception              | -  |
| Set                     | -  |
| Guided Response         | 70   |
| Mechanism               | 30   |
| Complex Overt Responses | -  |
| Adaptation              | -  |
| Origination             | -  |

#### Sample Questions for Course Outcome Assessment\*\* Course Outcome 1 (CO1):

- 1. Explain in detail the role of ground improvement in foundation engineering.
- 2. Mention the problems associated with challenging soils.
- 3. Explain in brief the various methods of ground improvement.

#### Course Outcome 2 (CO2):

- 1. Mention the purpose of dewatering.
- 2. Explain in detail with a neat sketch the method of dewatering using sumps and ditches stating its advantages and disadvantages.
- 3. Explain in brief the principle, equipment used, installation and operation and precaution adopted in electro-osmotic dewatering.

#### Course Outcome 3 (CO3):

- 1. Compare and contrast the various methods of in-situ densification techniques
- 2. Differentiate lime pile from sand compaction pile.

3. Explain in detail the dynamic compactionmethods of cohesion less soil deposit.

#### Course Outcome 4 (CO4):

- 1. Explain the concept of pre-loading. How do vertical drains improve the functioning of pre-loading technique?
- 2. Explain the installation process of stone columns.
- 3. Explain the installation process of lime piles.

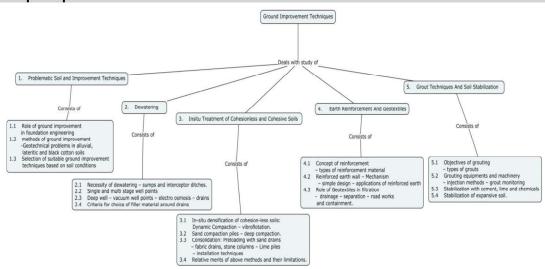

#### Course Outcome 5 (CO5):

- 1. Name any four applications of soil reinforcement for ground improvement.
- 2. Draw a reinforced earth wall and explain its components.
- 3. Geosynthetics can be used as soil reinforcement Justify in detail with supporting sketches.

## Course Outcome 6 (CO6):

- 1. Describe in detail about the various methods of grouting with neat sketches.
- 2. Enumerate with a neat sketch the grouting plant and equipment necessary and the procedure for carrying out grouting operations.
- 3. Explain in detail how an expansive soil is stabilized.

## Concept Map

#### **Syllabus**

**Problematic Soil and Improvement Techniques:** Role of ground improvement in foundation engineering – methods of ground improvement – Geotechnical problems in alluvial, lateritic and black cotton soils – Selection of suitable ground improvement techniques based on soil conditions. **Dewatering:**Necessity of dewatering – sumps and interceptor ditches – single and multi-stage well points – deep well - vacuum well points – electro osmosis drains – criteria for choice of filler material around drains.**Insitu Treatment of Cohesionless Soils:** In-situ densification of cohesion-less soils: Dynamic Compaction - vibroflotation, sand compaction piles - deep compaction. **Insitu Treatment of Cohesive Soils:** Consolidation - Preloading with sand drains - fabric drains, stone columns - Lime piles - installation techniques – relative merits of above methods and their limitations **Earth Reinforcement And Geotextiles:** Concept of reinforcement – types of reinforced earth - Role of Geotextiles in filtration - drainage - separation - road works and containment **Grouting Techniques and Soil Stabilization:** Objectives of

grouting - types of grouts – grouting equipments and machinery – injection methods – grout monitoring – stabilization with cement, lime and chemicals – stabilization of expansive soil.

#### **Course Contents and Lecture Schedule**

| Module | Topics  | No. of   | Course  |
|--------|---|----------|---------|
| No.    | Topics  | Lectures | Outcome |
| 1.     | Problematic Soil and Improvement Techniques                     |          |         |
| 1.1    | Role of ground improvement in foundation engineering            | 1        |         |
| 1.2    | methods of ground improvement – Geotechnical problems in        | 2        |         |
|        | alluvial, lateritic and black cotton soils                      | 2        | CO1     |
| 1.3    | Selection of suitable ground improvement techniques based       | 2        |         |
|        | on soil conditions  | 2        |         |
| 2.     | Dewatering  |          |         |
| 2.1    | Necessity of dewatering – sumps and interceptor ditches.        | 2        |         |
| 2.2    | Single and multi stage well points                              | 2        | CO2     |
| 2.3    | Deep well – vacuum well points – electro osmosis drains         | 2        |         |
| 2.4    | Criteria for choice of filler material around drains            | 2        |         |
| 3.     | Insitu Treatment of Cohesionless Soils                          |          |         |
| 3.1    | In-situ densification of cohesion-less soils: Dynamic           | 2        |         |
|        | Compaction – vibroflotation.                                    | 2        | CO3     |
| 3.2    | Sand compaction piles – deep compaction.                        | 2        | ]       |
| 4.     | Insitu Treatment of Cohesive Soils                              |          |         |
| 4.1    | Consolidation: Preloading with sand drains - fabric drains,     | 2        |         |
|        | stone columns – Lime piles – installation techniques            | 2        | CO4     |
| 4.2    | Relative merits of above methods and their limitations.         | 2        |         |
| 5.     | Earth Reinforcement And Geotextiles                             |          |         |
| 5.1    | Concept of reinforcement – types of reinforcement material      | 2        |         |
| 5.2    | Reinforced earth wall – Mechanism – simple design –             | 2        | 1       |
| 5.3    | Applications of reinforced earth                                | 1        | CO5     |
| 5.4    | Role of Geotextiles in filtration - drainage- separation - road |          | 1       |
|        | works and containment.  | 2        |         |
| 6.     | Grout Techniques And Soil Stabilization                         |          |         |
| 6.1    | Objectives of grouting – types of grouts                        | 2        | 000     |
| 6.2    | Grouting Equipments and machinery – injection methods           | 2        | CO6     |

| 6.3 | Grout monitoring                              | 1  |  |
|-----|---|----|--|
| 6.3 | Stabilization with cement, lime and chemicals | 2  |  |
| 6.4 | Stabilization of expansive soil.              | 1  |  |
|     | Total Hours                                   | 36 |  |

# Preamble

Students will acquire comprehensive knowledge of traffic surveys and studies such as volume count, Speed and delay, origin and destination, Parking, pedestrian and accident surveys. They will achieve knowledge on design of intersections. Students will become familiar with various traffic control and traffic management measures.

#### Prerequisite

Fundamentals of Highway Engineering **Course Outcomes** 

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Explain road user and vehicular characteristics                                 | 15                   |
| CO2          | Apply the knowledge of traffic surveys in traffic management                    | 20                   |
| CO3          | Design geometrics of intersections  | 15                   |
| CO4          | Apply the methods of traffic control aids in road network                       | 20                   |
| CO5          | Explain the rules and regulations of road safety                                | 15                   |
| CO6          | Adapt a suitable road safety management technique for congested traffic pattern | 15                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

# Sample Questions for Course Outcome Assessment Course Outcome1(CO1):

- 1. State the functions of traffic engineering.
- 2. Explain in detail the various road characteristics which affect the traffic performances.
- 3. A truck weighing 10 tons is required to accelerate at a rate of 1m/sec2 from an initial speed of 10kph to 20kph. The upward gradient is 1 percent and the road has a premix carpet in good condition, the coefficient of rolling resistance being 0.016. the frontal area is 5.37m2 and the coefficient of air resistance is 0.48kg/m3. The car tyres have radius of 0.34m. The rear axle gear ratio is 3.67:1 and the first gear ratio is 2.67:1. The transmission efficiency is 0.90. Calculate the horse-power needed and the speed of the engine.

#### Course Outcome 2(CO2):

- 1. Summarize the various factors affecting the practical capacity of road.
- 2. The following data were obtained from the spot speed studies.

Suggest i) Speed limit for regulation ii) Speed to check geometric design elements

iii) Lower speed group causing congestion iv) Dispersion.

| ) ==  |      | .p    |       |       | .,    |       |       |       |       |        |

| observed |    |    |    |    |     |     |     |     |    |    |

3. Apply the concept of collision and condition diagram for the accident spot

### Course Outcome3(CO3):

1. Traffic flow in an urban section at the intersection of two highways in the design year is given below. The highways intersect at right angles and have a carriage way width of 16m. Design the rotary intersection using PCU value of car =1, commercial vehicle (com.v) =2.8 and scooter (SC)=0.75.

| Approach | Left turning |       |     | Str | aight Ahe | ad  | Right Turning |       |     |  |
|----------|--------------|-------|-----|-----|-----------|-----|---------------|-------|-----|--|
| Approach | Car          | Com.V | SC  | Car | Com.V     | SC  | Car           | Com.V | SC  |  |
| N        | 200          | 50    | 100 | 250 | 40        | 160 | 150           | 50    | 80  |  |
| E        | 175          | 60    | 80  | 210 | 60        | 120 | 150           | 60    | 120 |  |
| S        | 245          | 70    | 100 | 120 | 50        | 80  | 160           | 55    | 80  |  |
| W        | 210          | 40    | 120 | 190 | 45        | 100 | 180           | 75    | 100 |  |

2. What do you mean by Interchange in Grade separated intersection?

3. Illustrate the concept of Level of service for a road network.

#### Course Outcome 4 (CO4):

- 1. Discuss the road markings required to enhance road safety.
- 2. Assume a city has congested traffic patterns. Illustrate traffic signs for that city.
- 3. Review about Traffic signal diagram, types and Signal Coordination

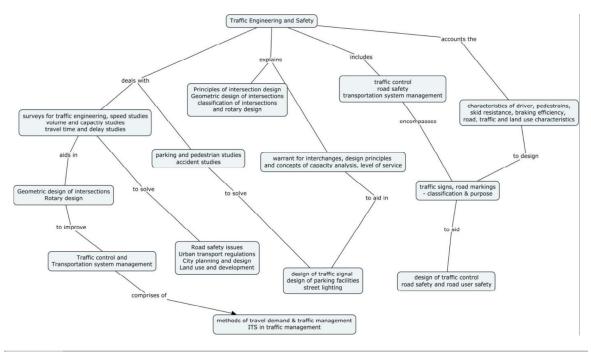

#### Course Outcome 5 (CO5):

- 1. Prepare a report of government and NGO's role in road safety.
- 2. Discuss in detail about traffic laws in India.
- 3. Summarize National road safety policy.

#### Course Outcome6(CO6):

- 1. Demonstrate the concept of Transportation System Management for commercial area.
- 2. Explain about Intelligent transport system (ITS) in detail.
- 3. When the prohibition of left turning is applicable?

#### **Concept Map**

#### Syllabus

**Introduction**. Significance and scope, Characteristics of Driver, the pedestrian, the vehicle and road, skid resistance and braking efficiency. Components of traffic engineering – road, traffic and land use characteristics. **Traffic Surveys and Analysis** -volume, capacityspeed and delay studies, origin and destination, parking studies, pedestrian and Accident studies. **Geometric Design of intersection-** conflict points at intersections, principles and elements of intersection design, rotary design, Interchanges – Warrant for interchanges, design principles of interchange –level of service. **Traffic Control-** Traffic signs, road markings, design of traffic signal and signal coordination. Traffic Control aids - street furnitures, street lighting**Road safety-** Definition, Objectives, Road safety demographics, Traffic regulations – basic principles, National Road Safety Policy, Motor Vehicle Act – 1988, Intersection safety, driving in night times, long journey, road safety at road works. **Traffic management systems -** methods and techniques for traffic management - role of ITS in traffic management.

#### **Course Contents and Lecture Schedule**

| 1.2 | Components of traffic engineering – road, traffic and land use    | 3  | CO1 |
|-----|---|----|-----|
|     | characteristics   |    |     |
| 2.0 | Traffic Surveys and Analysis                                      |    |     |
| 2.1 | Surveys for Traffic Engineering, Speed studies                    | 2  | CO2 |
| 2.2 | Volume and capacity Studies                                       | 1  | CO2 |
| 2.3 | Travel time and Delay Studies                                     | 1  | CO2 |
| 2.4 | Parking and pedestrian Studies                                    | 1  | CO2 |
| 2.5 | Accident Studies(concepts and problems)                           | 2  | CO2 |
| 3.0 | Geometric Design of intersection                                  |    |     |
| 3.1 | Conflict points at intersections                                  | 1  | CO3 |
| 3.2 | Principles and elements of intersection design                    | 1  | CO3 |
| 3.3 | Classification of intersection – concepts of flow in at grade and | 1  | CO3 |
|     | grade separated intersections                                     |    |     |
| 3.4 | Rotary design   | 2  | CO3 |
| 3.5 | Warrant for interchanges, design principles of interchange –      | 2  | CO3 |
|     | capacity analysis level of service (concepts)                     |    |     |
| 4.0 | Traffic Control   |    |     |
| 4.1 | Traffic signs, road markings – significance, classification and   | 2  | CO4 |
|     | purpose   |    |     |
| 4.2 | Design of traffic signal and signal coordination.                 | 2  | CO4 |
| 4.3 | Traffic control aids -Types of street furnitures                  | 1  | CO4 |
| 4.4 | Street lighting – Purpose, importance                             | 2  | CO4 |
| 5.0 | Road safety   |    |     |
| 5.1 | Definition, Objectives, Road safety demographics                  | 1  | CO5 |
| 5.2 | Traffic regulations – basic principles, National Road Safety      | 1  | CO5 |
|     | Policy, Motor Vehicle Act – 1988                                  |    |     |
| 5.3 | Intersection safety, driving in night times, long journey, road   | 2  | CO5 |
|     | safety at road works  |    |     |
| 6.0 | Transportation System Management                                  |    |     |
| 6.1 | Methods of Travel demand & traffic management                     | 3  | CO6 |
| 6.2 | Role of ITS in traffic management                                 | 2  | CO6 |
|     | TOTAL HOURS   | 36 |     |

# Preamble

To impart knowledge on understanding the properties of concrete, causes of its failure, effects and measures to repair and rehabilitate it.

### Prerequisite

Nil

#### Course Outcomes

On the successful completion of the course students will be able to:

| CO<br>Number | Course Outcome Statement   | Weightage**<br>in % |
|--------------|--|---------------------|
| CO1          | Explain the factors affecting the durability of concrete structures  | 15                  |
| CO2          | Identify the causes and effects of distress in concrete structures   | 15                  |
| CO3          | Diagnose distress in concrete structures and suggest suitable maintenance and repair strategies  | 10                  |
| CO4          | Enumerate the concept of quality assurance in structures, basic mechanisms by which quality assurance schemes are developed and operated with case studies | 10                  |
| CO5          | Suggest suitable materials of repair related to the distress with case studies   | 25                  |
| CO6          | Suggest suitable techniques of repair to distress structures with case studies   | 25                  |

\*\* Weightage depends on Bloom's Level, number of contact hours,

# Sample Questions for Course Outcome Assessment\*\*

#### Course Outcome 1 (CO1):

- 1. Discuss the phenomenon of sulphate attack on concrete mentioning the methods to minimize the same
- 2. Differentiate between the terms Repair, Rehabilitation and Retrofitting
- 3. Define the term permeability. List the factors affecting permeability of concrete

# Course Outcome 2 (CO2):

- 1. Discuss the mechanism of corrosion in rebars and discuss the influencing factors
- 2. Mention if cover thickness is related to corrosion of rebars? if so how?
- 3. List the types of distress that are likely to affect a break water structure discussing the causes and effects

### Course Outcome 3 (CO3):

- 1. Name two NDT tests of assessing quality of concrete
- 2. By means of a flow chart discuss the method of diagnosing distress in concrete structures
- 3. Which special concrete you would recommend for a concrete structure to be constructed in freezing climatic conditions and why? Also discuss the properties of such a concrete

### Course Outcome 4 (CO4):

- 1. Discuss the various methods of corrosion protection of rebars
- 2. Define the term quality assurance and mention its need
- 3. As a quality assurance engineer identify and discuss the components you would include in devising a new quality assurance scheme for a new organization.

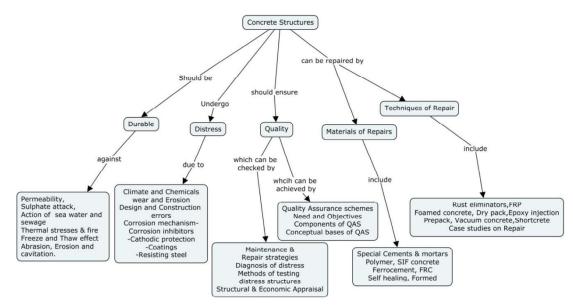

### Course Outcome 5 (CO5):

- 1. How do you make concrete buried under polluted ground resistant to corrosion? Discuss the various methods
- 2. Discuss a method of strengthening of a concrete beam. Discuss the properties of the materials used in the strengthening method
- 3. Which is the special concrete you would recommend for a concrete water tank and why? Give suitable reasoning discussing its features
- 4. What is the concreting technique you would recommend for a marine bridge pier construction? Justify and discuss its salient features

### Course Outcome 6 (CO6):

- 1. Present a brief note on foamed concrete and vacuum concrete.
- 2. Discuss any two rehabilitation techniques adopted in RCC buildings.
- 3. Explain the repairing Procedure for the structural members when it is distressed in different conditions.

### Concept Map

#### **Syllabus**

**Durability of Concrete Structures -** Permeability of concrete- Sulphate attack – methods of control – durability of concrete in sea water- action of sewage – thermal properties of concrete

– fire resistance – resistance to freezing and thawing – resistance to abrasion, erosion and cavitation. Distress in concrete structures- causes, effects and remedial measures- effects due to climate, temperature, chemicals, wear and erosion, design and construction errors, corrosion mechanism, effects of cover thickness and cracking, methods of corrosion protection, inhibitors, resistant steels, coatings, cathodic protection. Maintenance and Repair Strategies - Inspection, structural appraisal, economic appraisal- Diagnosis of distress – Procedure. Quality assurance – need- components- conceptual bases of quality assurance schemes. Materials for Repair – Special concretes and mortars, special cements for accelerated strength gain, expansive cement, polymer concrete, sulphur infiltrated concrete, ferro-cement, fibre reinforced concrete, self healing concrete, formed concrete, Fibre reinforced Polymers. Techniques of Repair – Rust eliminators and polymer coating for rebars during repair, foamed concrete, mortar and dry pack, prepack, vacuum concrete, gunite and shotcrete, epoxy injection, mortar repair for cracks – case studies on distress concrete structures and type of treatment done.

### Preamble

It is the science that deals with the waters of the earth, their occurrence, circulation, distribution and their reaction with environment including their relation to living things **Prerequisite** 

### Course Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Demonstrate the importance of hydrological cycle and make the measurement of rainfall data.   | 30                   |
| CO2          | Compute the losses viz evaporation, evapotranspiration and infiltration for a catchment area. | 20                   |
| CO3          | Calculate the quantity of runoff generated from a catchment.                                  | 10                   |
| CO4          | Illustrate the hydrographs to measure the stream flow.  | 15                   |
| CO5          | Compute flood flows and use suitable control measures.  | 10                   |
| CO6          | Suggest methods of conserving surface and groundwater.  | 15                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

#### Sample Questions for Course Outcome Assessment\*\*

#### Course Outcome1(CO1):

Adaptation

Origination

- 1. Describe the principle of working of a tipping bucket type recording rain gauge with a neat sketch. What are its advantages and disadvantages?
- 2. How is the double mass curve techniques used to check the consistency and adjust the rainfall record at a suspicious station?

\_

\_

3. A catchment has six rain gauge station. In a year, the annual rainfall recorded by the gauges are given below. For a 10% error in the estimation of the mean rainfall, calculate the optimum number of stations in the catchment.

| Statio | า       | А     | В     | С     | D     | E     | F     |
|--------|---------|-------|-------|-------|-------|-------|-------|
| Rainfa | ll (cm) | 120.2 | 118.6 | 119.3 | 125.2 | 100.2 | 119.9 |

#### Course Outcome2(CO2):

- A 6h storm produced rainfall intensities of 7, 18, 25, 12, 10, and 3mm/h in successive one hour intervals over a basin of 800 sq.km. The resulting runoff is observed to be 2640 hectare-metres. Determine Φ-index for the basin.
- 2. Write down the most common empirical formula used to calculate evaporation from a water body also explain the factors influencing evaporation.
- 3. Estimate the daily evaporation from a small reservoir using Horton and Mayer equations from the following data:

Water surface temperature=24°C, Air temperature=26°C, Atmospheric pressure=752 mm of mercury, Relative humidity=46%, Wind speed at 0.5m above ground=25.3 km/h, Saturation vapour pressure (water)=22.43mm of mercury, Saturation vapour pressure (air)=25.27mm of mercury.

#### Course Outcome3(CO3):

- 1. What is base flow?
- 2. Explain the various factors affecting the runoff
- 3. Draw the typical hydrograph and mention its components. Explain the methods of base flow separation.

# Course Outcome 4 (CO4):

1. The ordinates of 4 hour unit hydrograph are given below. Determine the ordinates of 12 hr unit hydrograph.

| Time (hr)                      | 0 | 2  | 4  | 6  | 8  | 10 | 12 | 14 | 16  | 18  | 20 | 22 | 24 | 26 | 28 |
|--------------------------------|---|----|----|----|----|----|----|----|-----|-----|----|----|----|----|----|
| Ordinates in m <sup>3</sup> /s | 0 | 13 | 21 | 24 | 18 | 15 | 12 | 10 | 8.3 | 6.5 | 5  | 4  | 3  | 1  | 0  |

- 2. Describe the step by step procedure of the derivation of a unit hydrograph from an isolated storm.
- 3. What is S-hydrograph?

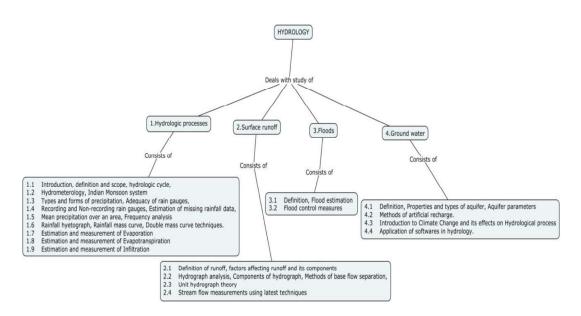

### Course Outcome 5 (CO5):

- 1. What is a design flood?
- 2. Define MPF.
- 3. What are the different types flood control methods? Explain

### Course Outcome6(CO6):

- 1. Distinguish natural and artificial recharge of groundwater. Enumerate different methods adopted for recharging the groundwater.
- 2. Enumerate the methods which are used for determining the yield of a well. Discuss briefly.
- 3. List the different types of aquifers and also explain their properties.

#### **Concept Map**

#### Syllabus

**Hydrologic processes:** Introduction, definition and scope, hydrologic cycle, Hydrometeorology, Indian Monsoon system, Types and forms of precipitation, Adequacy of rain gauges, Recording and Non-recording rain gauges, Estimation of missing rainfall data, Mean precipitation over an area, Frequency analysis, Rainfall hyetograph, Rainfall mass curve, Double mass curve techniques. Estimation and measurement of Evaporation, Evapotranspiration and Infiltration. **Surface runoff:** Definition of runoff, factors affecting runoff and its components, Hydrograph analysis, Components of hydrograph, Methods of base flow separation, Unit hydrograph and Stream flow measurements using latest techniques. **Floods**: Definition, Flood estimation and its control. **Ground water:** Definition, Properties and types of aquifer, Aquifer parameters, Methods of artificial recharge. Introduction to Climate Change and its effects on Hydrological process. Application of softwarein hydrology.

### Preamble

The student develops skills on airport planning and design with the prime focus on runway and taxiway geometrics. Students become conversant with the definition, purpose, location and materials of coastal structures such as piers, breakwaters, wharves, jetties, quays and fenders. The students acquire knowledge on site reconnaissance for location and planning of harbours.

### Prerequisite

NIL

# Course Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Understand the basics of airport planning and its importance in national development  | 20                   |

### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

#### Course Outcome 1(CO1):

- 1. Discuss in brief the historical development of air transport.
- 2. Explain the various survey to be conducted and the data to be collected for airport site selection.
- 3. Enumerate the various factors to be kept in view in selection of site for airports.

#### Course Outcome 2(CO2):

1. The proposed longitudinal section along the centre line of a runaway is as follows:

| Station to station | Gradient in percent |  |  |  |  |  |
|--------------------|---------------------|--|--|--|--|--|
| 0.00 to 8.00       | +1.25               |  |  |  |  |  |
| 8.00 to 15.00      | -1.00               |  |  |  |  |  |
| 15.00 to 30.00     | +0.50               |  |  |  |  |  |
| 30.00 to 45.00     | +0.20               |  |  |  |  |  |
| 45.00 to 60.00     | -0.40               |  |  |  |  |  |

If stations are located at a regular interval of 30m, determine the effective gradient of the runway.

2. The wind data obtained from on airport site over a period of 4 years are given below. Draw windrose diagram (Type I) to a suitable scale on a graph paper. Determine calm period, the best orientation of runways and the total wind coverage.

| Wind<br>direction        | z   | NNE  | NE  | ENE | ш   | ESE | SE  | SSE | S   | SSW  | SW   | MSM | M   | WNW | NN  | NNW |
|--------------------------|-----|------|-----|-----|-----|-----|-----|-----|-----|------|------|-----|-----|-----|-----|-----|
| Total<br>%age<br>of time | 7.6 | 11.3 | 7.1 | 3.7 | 1.5 | 0.8 | 0.5 | 5.1 | 8.5 | 15.3 | 12.5 | 5.8 | 3.4 | 0.6 | 0.5 | 4.0 |

3. A taxiway is to be provided for a supersonic transport which has following characteristics. Determining the turning radius of the taxiway. Wheel base= 35 m. Tread of main loading gear =7.1m.Turning speed = 55kmph. Co-efficient of friction between tire and pavement surface=0.14.

### Course Outcome 3(CO3):

- 1. Discuss the requirements and functions of runway marking system.
- 2. Describe the Concept of Instrumental Landing System .(ILS) in airways.
- 3. Describe in brief the need of air traffic control.

### Course Outcome 4 (CO4):

- 1. Sketch the layout of a harbour and explain its components.
- 2. Classify different types of breakwaters.
- 3. State the requirements of a good port site.

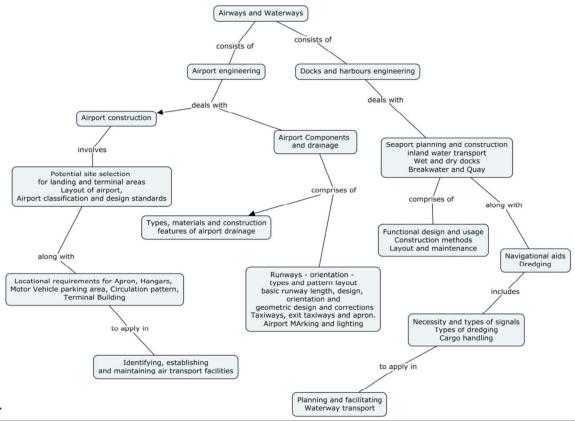

### Course Outcome 5 (CO5):

- 1. Explain about Dry Docks and Wet docks and Also their classification.
- 2. Classify different types of Repair docks. Explain any one in brief.
- 3. State the necessity of docks.

### Course Outcome 6(CO6):

- 1. Sketch the figure of navigational aids and discuss its functions in guiding the ship to the berth.
- 2. Paraphrase the various on-shore mooring accessories of ships with the help of a neat sketch.
- 3. Describe the significance of dredging.

### **Concept Map**

### Syllabus

**Airport planning:** Role of air transport - Components of airports-Airport Planning, Site Selection **Design of Airport components :** Runway Design - Orientation, Cross wind Component, Wind rose Diagram, Geometric Design, Taxiway, Airport Drainage - Airport Zoning, Clearance over Highways and Railways, Airport Layouts – Apron, Terminal Building, Hangars, Motor Vehicle Parking Area and Circulation Pattern, Case studies of Airport Layouts - Airport Buildings - Planning Concepts. **Visual aids andAir Traffic Control:** Airport marking and lighting-Need of Air Traffic Control-Air Traffic Control Network-Air Traffic control Aids. **Harbours and Docks :** Definition of Terms - Harbours, Ports, Docks, Tides and Waves, Littoral Drift, Sounding, Area, Depth, Satellite Ports, Requirements and Classification of Harbours – Site Selection & Selection Investigation – Speed of water, Range of Tides, Waves and Tidal Currents, Anchoring Grounds, Geological Characteristics, Shore Considerations - Proximity to Towns/Cities, Utilities, – Coastal Structures- Breakwaters, Wharves- Dry and Wet Docks, Planning and Layouts, **Navigational aids and dredging:** Navigating - Mooring Accessories, Navigational Aids-Dredging.

### COMPUTATIONALMETHODS IN STRUCTURAL ANALYSIS

| Category |   | Т | Ρ | Credit |
|----------|---|---|---|--------|
| PE       | 3 | 0 | 0 | 3      |

### Preamble

It is common practice to use approximate solutions of differential equations as the basis for structural analysis. This is usually done using numerical approximation techniques. The most commonly used numerical approximation in structural analysis is the Finite Element Method. This course endeavours to fulfil two principal objectives. First, it acquaints matrix methods of structural analysis and their underlying concepts and principles. After a thorough presentation of mathematical tools and theory required for linear elastic analysis of structural systems, the course focuses flexibility and stiffness methods of analysis for computer usage. The direct stiffness method is the backbone of most computer programs is also discussed. Besides, the physical behavior of structures is analysed throughout with the help of axial thrust, shear force, bending moment and deflected shape diagrams.

#### Prerequisite

18CE220 - Engineering Mechanics, 18CE320 - Mechanics of Solids, 18CE420-Structural Analysis.

#### Course Outcomes

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Compute the internal moment and by establishing BMD for beams and frames by flexibility method            | 20%                  |
| CO2          | Solve for member forces of trusses and grids by flexibility method  | 15%                  |
| CO3          | Calculate the internal moment and the resultant BMD of beams, frames using stiffness method               | 15%                  |
| CO4          | Resolve the member forces of trusses and grids by stiffness method  | 15%                  |
| CO5          | Solve for the internal forces and construct the BMD for Beams and plane frames by direct stiffness method | 20%                  |
| CO6          | Prepare the member forces report for the trusses and grids by direct stiffness method                     | 15%                  |

On the successful completion of the course students will be able to

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

| Mechanism               | 50   |
| Complex Overt Responses |  |
| Adaptation              |  |
| Origination             |  |

#### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

### Course Outcome1(CO1):

1. Analyse the continuous beam shown below by flexibility method.

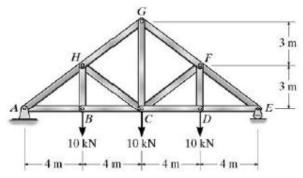

2. A cantilever of varying cross section is subjected to a single concentrated load W at the free end as shown in figure-6. Find the deflection at the free end using flexibility method. Also draw the BMD.

Figure-6

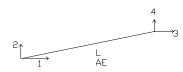

#### Course Outcome2(CO2):

1. Evaluate the member forces of this truss using flexibility method.

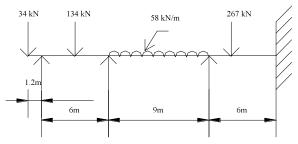

#### Course Outcome3(CO3):

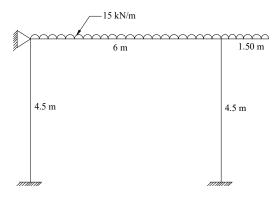

1. Find the element stiffness matrix of a truss element shown below.

 By displaced method, analyse the continuous beam due to applied load as shown below and the support C sinks by 1cm. Solve for unknown displacement using LDL<sup>⊤</sup> decomposition technique. Take E = 2 e5Mpa and I= 374.6e6mm<sup>4</sup>

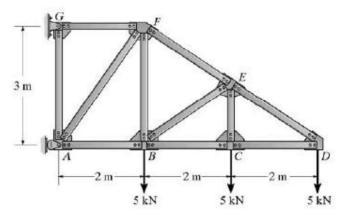

3. Analyse the frame using displacement method. The frame is supported at the beam level. Draw the BMD. Assume EI is constant.

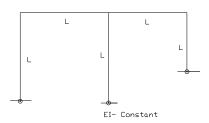

### Course Outcome 4 (CO4):

1. Estimate the member forces of this truss using displacement method.

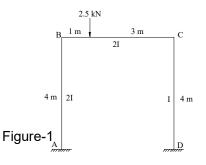

### Course Outcome 5 (CO5):

1. Obtain the stiffness matrix of the frame given below by direct stiffness approach.

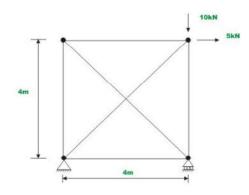

2. Analyse the portal frame subjected to a concentrated load on the beam as shown in figure-1 using direct stiffness method. Draw the BMD.

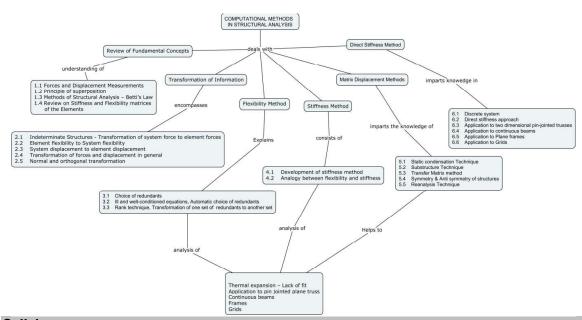

#### Course Outcome6(CO6):

1. Determine the member forces of this truss using direct stiffness method.

#### **Concept Map**

### Syllabus

**Review of Fundamental Concepts:** Introduction – Forces and Displacement relationships – Principle of superposition – Methods of Structural Analysis – Betti's Law – Stiffness and Flexibility matrices of the Elements – a review. **Transformation of Information:** Indeterminate Structures – Transformation of system force to element forces – Element flexibility to System flexibility – system displacement to element displacement – Transformation of forces and displacement in general – Normal and orthogonal transformation. **Flexibility Method:** Choice of redundant – ill and well-conditioned equations – Automatic choice of redundant – Rank technique – Transformation of one set of redundant to another set – Thermal expansion – Lack of fit – Application to pin jointed plane truss – continuous beams - frames and grids. **Stiffness Method:** Development of stiffness method – analogy between flexibility and stiffness – Analysis due to thermal expansion, lack of fit – Application to pin-jointed plane and space trusses – Continuous beams – frames and grids – problem solving. **Matrix Displacement Methods -Special Topics:** Static condensation Technique – Substructure Technique - Transfer Matrix method – Symmetry & Anti symmetry of structures – Reanalysis Technique. **Direct Stiffness Method:** Discrete system – Direct stiffness approach – Application to beams, plane frames and two dimensional pin-jointed trusses - Grids.

ASEISMIC DESIGN OF STRUCTURES

| Category | L | T | Ρ | Credit |
|----------|---|---|---|--------|
| PE       | 3 | 0 | 0 | 3      |

# Preamble

This course offers design of structures subjected seismic forces. This also includes Design concepts of seismic analysis and application using ETABS.

### Prerequisite

Dynamics of Structures, RC and Steel structure design

### **Course Outcomes**

On the successful completion of the course, students will be able to

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Apply the SHA to evaluate seismic hazard parameters   | 20                   |
| CO2          | Apply theory of vibration to the built structures with external excitation to calculate response on the structure and evaluate liquefaction potential | 20                   |
| CO3          | Analyse the RC structures using IS codes.   | 25                   |
| CO4          | Analyse the Steel structures and arrive the residual life estimation of structures using IS codes   | 15                   |
| CO5          | Design shear walls using IS codes   | 10                   |
| CO6          | Understand the steps to analyse and design the structures using ETABS   | 10                   |

| Origination             | -   |

### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

### Course Outcome 1 (CO1):

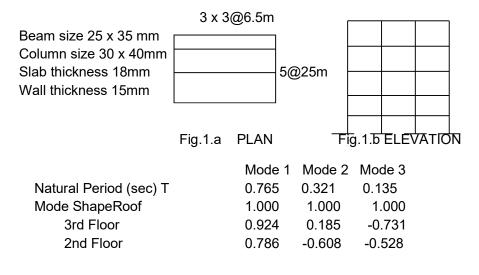

- 1. Distinguish the magnitude and intensity of earthquake
- 2. Describe the two approaches followed for the prediction of earthquakes.
- 3. Name the major plates of the earth.

### Course Outcome 2 (CO2):

- 1. Define storey drift.
- 2. Define 'torsional effect' on buildings?
- 3. Define modal mass and modal participation factor.

### Course Outcome 3 (CO3):

- 1. Explain the concepts and types of Response spectrum. Write step by step procedure of constructing response spectrum diagrams with neat sketch.
- 2. Design fig 1.a & 1.b by using Response spectrum method. The Free Vibration Properties of the building for vibration in the X-Direction is shown below

### 1st Floor

0.441 -0.921 1.016

# Course Outcome 4 (CO4):

- 1. Explain the factors affecting ductility of RCC members.
- 2. Analyse a three storied RC building by static method and also determine modal mass and modal participation factor as per IS 1893 (PART 1): 2002 for the following data.

Seismic zone = IV Floor height = 4.0m Length of building = 10m Infill wall = 250mm thick in longitudinal and 150mmmm in transverse direction. Imposed load =  $3.5 \text{ kN/m}^2$ Size of columns = 250mm x 400mm. Size of beams = 300mm x 400mm in longitudinal and 300mm x 350mm in transverse direction Depth of slab = 120mm

3. Design for lintel and Roof band of a single room building of size 6.m x 4m. The walls are 200mm thick in modular bricks built in 1:5 cement sand mortar. The height of building up to lintel level is 3m and the vertical distance between the roof band and lintel band is 1.5m. The roof band weighs 750 kg/ m2. The bands are required for a design earthquake coefficient of 0.12. Weight of wall is 450 kg/ m2 .Weight of masonry is 1900 kg/ m2.

# Course Outcome 5 (CO5):

1. Analyse a three storied steel frame by static method and also determine modal mass and modal participation factor as per IS 1893 (PART 1): 2002 for the following data.

Seismic zone = IV Floor height = 4.0mLength of building = 10mImposed load =  $3.5 \text{ kN/m}^2$ Size of columns = ISMB 600. Size of beams = ISMB 300 Chequered type of flooring of thickness 6mm.

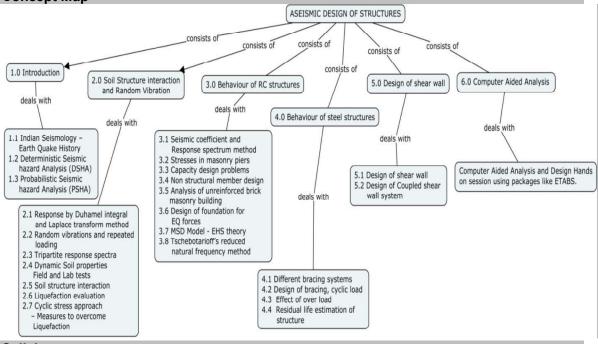

- 2. Explain the impact of bracings in steel frame subjected to seismic forces
- 3. Discuss the behaviour of beam column connections in seismic forces.

# Course Outcome 6(CO6):

1. Analyse and design using ETABS a three storied RC building by static method and also determine modal mass and modal participation factor as per IS 1893 (PART 1): 2002 for the following data.

Seismic zone = IV Floor height = 4.0m Length of building = 10m Infill wall = 250mm thick in longitudinal and 150mm in transverse direction. Imposed load =  $3.5 \text{ kN/m}^2$ Size of columns = 250mm x 400mm. Size of beams = 300mm x 400mm in longitudinal and 300mm x 350mm in transverse direction: Depth of slab = 120mm.

#### Syllabus

Introduction - Indian Seismology – Earth Quake HistoryDeterministic Seismic HazardAnalysis (DSHA) Probabilistic Seismic hazard Analysis (PSHA) Soil Structure interaction and Random Vibration Response by Duhamel integral and Laplace transform method-Response of the structure to random vibrations and repeated loading -Tripartite response spectra problems - Dynamic Soil properties Field and Lab tests-soil structure interactionLiquefaction Problems on Liquefaction evaluation -Cyclic stress approach –Seed and Idriss method – Measures to overcome LiquefactionBehaviour of RC structures -Seismic coefficient and Response spectrum method -Analysis of stresses in masonry piers -Capacity design problems-Design of non-structural member -lateral load analysis of un reinforced brick masonry building -Design of shear wall – Khan and Saboronis method -Coupled shear wall system – Rosman's method - Design of foundation for EQ forces -MSD Model - EHS theory -Tschebotarioff's reduced natural frequency method Behaviour of steel structures: Lateral load analysis of steel structuredifferent bracing systems -design of bracing, cyclic load -Effect of over load -Residual life estimation of structureComputer Aided Analysis and Design Hands on session using packages like ETABS

# Preamble

This course offers various experimental techniques and measurements needed for analysis and design of structures. The course covers the basic aspects of experimental stress analysis that includes exhaustive treatment of the most versatile techniques like photo elasticity and strain gauges.

#### Prerequisite

Strength of materials

### Course Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement   | Weightage***<br>in % |
|--------------|--|----------------------|
| CO1          | Understand the principles of operation of different types of strain gauges                         | 10                   |
| CO2          | Apply the principle to operation of the strain gauges into various structural engineering problems | 25                   |
| CO3          | Apply the photo elasticity theory to stress analysis.  | 25                   |
| CO4          | Understand various NDT technique and its principle of operation                                    | 10                   |
| CO5          | Apply the principle of model analysis to prototype structure.                                      | 10                   |
| CO6          | Apply the various instruments involved in the measurement of vibration parameters                  | 20                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

| Complex Overt Responses | -  |
| Adaptation              | -  |
| Origination             | -  |

### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

#### Course Outcome1(CO1):

- 1. Define cross sensitivity
- 2. List the types of strain gauges
- 3. Brief the principle of operation mechanical strain gauge
- 4. Explain the principle of Strain gauge Rosettes. Compare the available Rosettes and their applications.

### Course Outcome2(CO2):

 Four strain gauges,each of 100Ω resistance and gauge factor 2.0 ,are mounted on a steel cantilever and connected to Wheatstone bridge circuit as shown in fig. The bridge supply voltage is 6V.Find bridge output voltage,when a force of 100N is applied at the free end of the cantilever. E=20X10<sup>10</sup> N/m<sup>2.</sup> 2. What do you understand by temperature compensation in connection with the electrical resistance strain gauge? Explain clearly the terms, selected melt gauges,dual element gauges and adjacent arm compensation

### Course Outcome3(CO3):

- 1. Explain the elements of a plane polariscope. What are the difference between isoclinic and isochromatic fringes?
- 2. Explain the effect of a stressed model in a standard circular polaiscope using jones calculus
- 3. Derive the condition for extinction of light in crossed-crossed circular polariscope arrangement with monochromatic light source and stressed model, placed in the middle.

#### Course Outcome 4 (CO4):

- 1. Explain the principle of operation of Impact Echo method
- 2. Brief how Ground penetrating Radar helps to investigate the failures
- 3. Explain how cracks are determined by using Radiographic testing

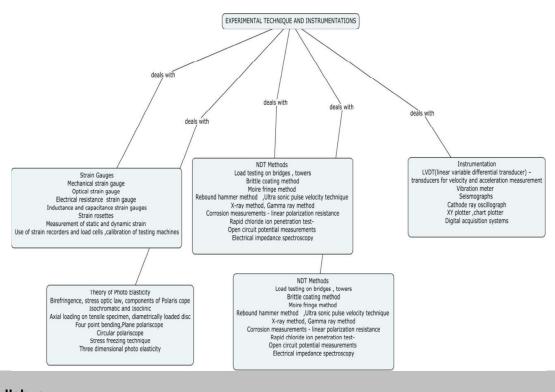

#### Course Outcome 5 (CO5):

- 1. Differentiate direct and indirect model analysis
- 2. Elaborate how moment deformater provides ILD for BM at internal sections of a model

#### Course Outcome6(CO6):

- 1. Derive a general expression for the output voltage of Wheatstone Bridge circuit for different strain gauge combinations
- 2. Explain the principle of Strain gauge Transducers. With the help of neat sketch,
- 3. Explain the application of strain gauges in Load cells and Torque Transducers.

#### **Concept Map**

#### Syllabus

Passed Board of Studies Meeting held on 09.11.2019

**Strain Gauges** Mechanical strain gauge -Optical strain gauge - Electrical resistance strain gauge - Inductance and capacitance strain gauges - Strain rosettes -Wheat stone bridge - Ioad cells, Torque meterdynamic strain measurements- Maxwell's bridge, Hay's bridge - Kelvin's double bridge Wein bridge**Theory of Photo Elasticity** - Birefringence, stress optic law, components of Polaris cope - Isochromatic and Isoclinic - Axial Ioading on tensile specimen diametrically loaded disc- Four point bending,Plane polariscope- Circular polariscope**NDT Methods** - Rebound hammer method, Ultra sonic pulse velocity technique - Liquid penetrant testing, surface crack detection - Acoustic emission Techniques - Infrared and thermal testing - X-ray method, Gamma ray method - Corrosion measurements - linear polarization resistance - Rapid chloride ion penetration test**Model Analysis** Structural similitude - Structural similitude - Structural and dimensional analysis - Buckingham pi theorem ,Muller Breslau's principle - Direct and indirect analysis , **Instrumentation**- LVDT(linear variable differential transducer) – transducers for velocity and acceleration measurement- Vibration meter - Seismographs-Cathode ray oscillograph - XY plotter ,chart plotter - Digital acquisition systems

# Preamble

The syllabus of subject "Computer Aided Design" of structures includes the main concepts of informatics, computer hardware and software, principles for design and types of operational systems (Windows), work with interpreter, compilers and linkage editors. The main aspects of programming with MS Visual C++ consideredare: variables and types of data, arithmetical, logical and relational operations, main operators, functions, objects, classes, input-output operators, etc. This course provides the essentials of performing computer-aided design, from engineering rather than a purely mathematical point of view.

### Prerequisites

Design of Reinforced Concrete Elements (18CE610), Prestressed Concrete (18CEPF0) and Design of Steel Elements (18CE570) **Course Outcomes** 

| CO<br>Number | Course Outcome Statement   | Weightage***<br>in % |
|--------------|--|----------------------|
| CO1          | Formulate algorithm for solving equations and construct algorithm for truss problems using matrix method | 20                   |
| CO2          | Construct algorithm for design of reinforced concrete members  | 20                   |
| CO3          | Construct algorithm for design of steel members  | 15                   |
| CO4          | Construct algorithm for analysis of prestressed concrete members   | 15                   |
| CO5          | Formulate spread sheet for design of structural elements and quantity estimation                         | 15                   |
| CO6          | Develop stages of computer aided analysis and design including optimisation                              | 15                   |

On the successful completion of the course, students will be able to

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

# Sample Questions for Course Outcome Assessment\*\*

Course Outcome 1 (CO1):

1. Determine the forces in the members of the truss shown in Fig.1 by matrix stiffness method. Take E = 200GPa.

#### Fig.1

2. Solve the following system of equations by Gauss elimination method.

 $3x_1 - 4x_2 - x_4 = 2$   $x_2 + x_3 + 4x_4 = 3$   $x_1 - 3x_2 + 6x_3 - 2x_4 = -3$  $x_2 + 2x_3 + 3x_4 = -4$ 

3. Generate the algorithm for solving simultaneous equations by Gauss Elimination Method. Course Outcome 2 (CO2):

- 1. Write the algorithm for determination of bending moment coefficients for two way simply supported slab.
- 2. Compare the stress-strain relation for mild steel with that of cold formed steel.
- Write the algorithm for determination of bending moment coefficients for two way simply supported slab

#### Course Outcome 3 (CO3):

- Determine the web and flange sections, intermediate and end bearing stiffeners required for a welded plate girder section which will be provided for a hall. The superimposed load exclusive of self weight is 150kN/m. The span of the girder is 20m.
- 2. Write the algorithm for analysis and design of single and built up steel beam sections.
- 3. Write the algorithm for design of web and flange section of a welded plate girder.

#### Course Outcome 4 (CO4):

- 1. Express the equations for analysis of prestressed concrete members due to self weight and prestress.
- 2. Compute the stresses at the central section for the following cases for a prestressed concrete beam.
  - a.) Prestress + self weight (density of concrete =  $24 \text{ kN/m}^3$ )
  - b.) Prestress + self weight + live load.

The concrete beam is of symmetrical I-section spanning 8m has flange width and thickness of 200 and 60mm respectively. The overall depth of the beam is 400mm. The thickness of the web is 80mm. The beam is prestressed by a parabolic cable with an eccentricity of 15mm at the centre and zero at the supports with an effective force of 100kN. The live load on the beam is 2kN/m.

3. Outline the algorithm for analyzing prestressed concrete members.

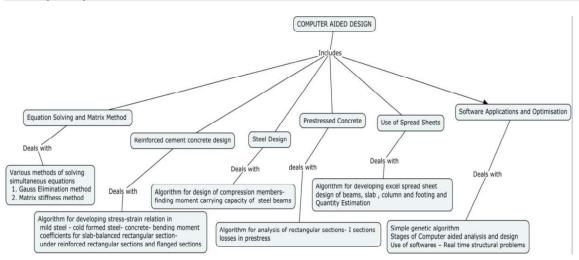

#### Course Outcome 5 (CO5):

- 1. Generate the spread sheet for design of one way continuous slab.
- 2. Write the algorithm for developing spread sheet taking off quantities for various items of works.
- 3. Outline the algorithm for designing structural elements using spread sheet.

#### Course Outcome 6 (CO6):

- 1. List the softwares for analysis and design of structural members.
- 2. Describe the different stages of computer aided design softwares.
- 3. Describe the step by step procedure of analysing and designing a two bay two storied portal frame using any computer aided design software.

#### **Concept Map**

#### Syllabus

**Equation solving and Matrix method:** Algorithm for solving simultaneous equations – Gauss elimination method; banded and semi-banded matrices – local and global coordinate system; element stiffness matrix – structure stiffness matrix – algorithm for solving trusses by matrix stiffness method. **Reinforced cement concrete design:** Algorithm for stress strain relationship in mild steel – cold formed steel – stress-strain relationship in concrete; algorithm for bending moment coefficients in slab; algorithm for developing design tables for beams – rectangular and flanged sections. **Steel design:** Algorithm for analysis and design of compression members; Algorithm for moment carrying capacity of steel beams. **Prestressed concrete:** Algorithm for analysis of prestressed rectangular and I sections in flexure – algorithm for finding losses in prestress. **Spread sheets:** Algorithm for developing spread sheet for various structural elements like beam-slab-column-footing and for quantity estimation. **Software Applications and Optimisation:** Introduction to optimisation – simple genetic algorithm; stages of computer aided analysis and design; Use of softwares to real time structural problems

### Preamble

Disaster mitigation and its preparedness is the need of current scenarios. Blast induced loads on structures are results of accidents in the industries and also from evil minds. These disasters, if happened, may result devastating effect on infrastructure including operational facilities, buildings, bridges etc. This will not only cause monetary loss but importantly the loss of lives. The course is proposed with an aim of educating students for mitigation of blast effects on structures.

### Prerequisite

NIL

#### Course Outcomes

On the successful completion of the course, students will be able to

| CO<br>Number | Course Outcome Statement   | Weightage<br>in % |
|--------------|--|-------------------|
| CO1          | Explain the fundamentals of blast engineering and related blast dynamics.  | 15                |
| CO2          | Understand the theoretical and practical aspects of the recent<br>advancements made in blast resistant and anti-terrorism design of<br>structures in existing facilities.  | 15                |
| CO3          | Review the high strain rate behavior of material.  | 10                |
| CO4          | Illustrate the characteristics of underground blast and its influence on geological factors.   | 10                |
| CO5          | Plan and Design blast resistant strategies in structural and non<br>structural components using empirical approach and available<br>commercial packages of finite element. | 25                |
| CO6          | Apply the Indian/international guidelines in design of blast resistant structure for intended level of threat scenario from chosen material.                               | 25                |

#### **Course Level Assessment Questions**

CO1: Explain the fundamentals of blast engineering and related blast dynamics.

- 1. Define the term: Path of triple point, Mach stem, and vortex.
- 2. List out the types of Blast loading and its causes.
- 3. State Buckingham Pi Theorem.

# CO2:Understand the theoretical and practical aspects of the recent advancementsmade in Blast resistant and anti-terrorism design of structures in existingfacilities.

- 1. List out the Limitations in empirical approaches in determination of Blast loading.
- 2. Describe in detail about sacrificial wall.
- 3. Calculate the pressure and impulse of various intensities of blast loading.
- CO3: Review the high strain rate behavior of materials.
  - 1. Define the term strain rate and categorise the load based on it.
  - 2. Explain about the working principle of Split Hopkinson Pressure Bar test facilities.
  - 3. Investigate the properties of shock absorbing materials.
- CO 4: Illustrate the characteristics of underground blast and its influence ongeological factors.
  - 1. Determine the behaviour of underground blast induced ground motion using empirical approach.
  - 2. Asses the behaviour of shock wave under various medium.
  - 3. Explain the mechanism of soil liquefaction due to underground explosion.

CO5: Plan and Design blast resistant strategies in structural and non structural components using empirical approach and available commercial packages of finite element.

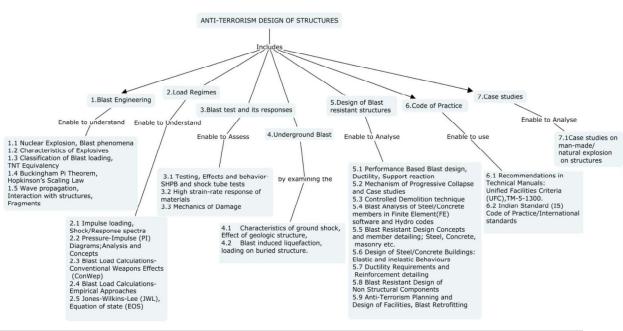

1. Explain in detail how the controlled demolition techniques can be adopted.

- 2. Illustrate the mechanism of progressive collapse and discuss the lessons learned from experience.
- 3. Discuss in detail about blast mitigating strategies.

CO6: Apply the Indian/international guidelines in design of blast resistant structure forintended level of threat scenario from chosen material.

- 1. Recommend suitable provisions to be included in IS Codes for resisting blast load.
- 2. Find the gaps in Blast design codal provisions of various countries.
- 3. Mention the types of polymers, which are used to increase the performance of structure.

#### Concept Map

#### Syllabus

Blast Engineering: Nuclear Explosion, Blast phenomena, Characteristics of Explosives, Classification of Blast loading, TNT Equivalency, Buckingham Pi Theorem, Hopkinson's Scaling Law, Wave propagation, Interaction with structures, Fragments. Load Regimes: Impulse loading, Shock/Response spectra, Pressure-Impulse (PI) Diagrams; Analysis and concepts, Blast Load Calculations-Conventional Weapons Effects (ConWep) and Empirical Approaches, Jones-Wilkins-Lee (JWL), Equation of state (EOS) Blast test and its responses: Testing, Effects and behavior-SHPB and shock tube tests, High strain-rate response of materials, Assessing the Mechanics of Damage Underground blast induced ground motion: Characteristics of ground shock, Effect of geologic structure, blast induced liquefaction, loading on buried structure. Design of Blast resistant structures: Performance Based Blast design, Ductility, Support reaction, Mechanism of Progressive Collapse and Case studies, Controlled Demolition technique, Blast Analysis of Steel/Concrete members in Finite Element(FE) software and Hydro codes, Blast Resistant Design Concepts and member detailing- Steel, Concrete, masonry etc, Design of Steel/Concrete Buildings: Elastic and inelastic Behaviours, Ductility Requirements and Reinforcement detailing, Blast Resistant Design of Non Structural Components. Anti-Terrorism Planning and Design of Facilities, Blast Retrofitting. Code of Practice: Recommendations in Technical Manuals: Unified Facilities Criteria (UFC), TM-5-1300. Gaps in Indian Standard (IS) Code of Practice/International standards. Case studies: Case studies on man-made/natural explosion on structures.

## Preamble

This course work is focused on recovery of resources and energy from solid waste which includes sludge sedimented from wastewater. The process of material recovery and energy recoveryin the form of Thermal, Biofuels and green manure product from the solid waste is covered in detail. The course work also covers several case studies to recycle the usable materials recovered from solid waste with its socio-economic and legal considerations. **Prerequisite** 

NIL

#### Course Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement   | Weightage***<br>in % |
|--------------|--|----------------------|
| CO1          | Understand the various recovery processes and volume reduction processes on generated solid waste          | 15                   |
| CO2          | Assess the biological process for transformation of solid waste to useful by-products                      | 15                   |
| CO3          | Assess the Bio-chemical process for transformation of solid waste to useful by-products.                   | 15                   |
| CO4          | Assess the Thermo-chemical process for transformation of solid waste to useful by-products.                | 30                   |
| CO5          | Analyse the recycling and recovery concepts of various solid wastes and E-waste                            | 15                   |
| CO6          | Select appropriate technology to recover resources and<br>energy from the waste generated by the community | 10                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

#### Sample Questions for Course Outcome Assessment\*\*

#### \*\* (2 to 3 at the cognitive level of course outcome)

#### Course Outcome 1 (CO1):

- 1. State Sustainable Development
- 2. State the objectives of processing of waste
- 3. Describe the material and energy flow management

#### Course Outcome 2 (CO2):

- 1. Name various methods of composting
- 2. List the factors affecting composting
- 3. List the scope and importance of vermi culture

#### Course Outcome 3 (CO3):

- 1. State the principles of anaerobic digester
- 2. Name some toxic substances which affects anaerobic disgestion
- 3. Explain the process of methane generation by anaerobic digestion

#### Course Outcome 4 (CO4):

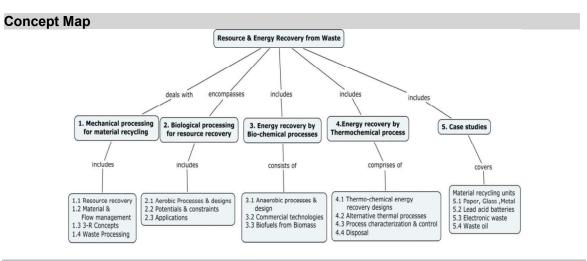

- 1. State the principles of Thermal chemical conversion of waste to energy
- 2. Explain the process of energy recovery from incineration
- 3. Describe the process of incineration systems

#### Course Outcome 5 (CO5):

- 1. Explain the concept of life cycle approach
- 2. Explain the process of recycling technologies practiced for various materials
- 3. Explain the process of recycling technologies of E waste with a case study

#### Course Outcome 6 (CO6):

- 1. Discuss the legal considerations for the materials recovered from the E-waste
- 2. Explore the energy generation potential generated from the market waste.

#### Syllabus

Mechanical processing for material recycling: Resource recovery for a sustainable development- Material and energy flow management and analysis - Systems and processes for reduction, reuse and recycling -Objectives of Wasteprocessing-Source Segregation and Hand Sorting-Waste Storage and Conveyance – Shredding – Pulping - Size Separation by Screens-Density Separation by Air Classification -magnetic and electromechanical separation processes- Design Criteria and Equipment selection. Biological processing for resource recovery : Mechanisms of Biological Processing – Aerobic Processing of Organic fraction – Compostingmethods and processes- factors affecting- Design of Windrow Composting Systems- In VesselComposting- Compost Quality Control- Vermiculture: definition, scope and importance - common species for culture - Environmental requirements - culture methods-Applications of vermiculture- Potentials and constraints for composting in India-Largescale and decentralized plants. Bio-chemical conversion of waste to energy: Principles and Design of Anaerobic Digesters – Process characterization and control- Thebiochemistry and microbiology of anaerobic treatment - Toxic substances in anaerobic treatment -Methane generation by Anaerobic Digestion- Anaerobic reactor technologies - Commercial anaerobic Technologies-Single stage and multistage digesters- Digester design and performance-Gas collection systems-Methane Generation and Recovery in Landfills - Biofuels from Biomass. Thermochemical conversion of waste to energy: Principles and Design of Energy Recovery Facilities -Types and principles of energy conversionprocesses - Incinerator design - Mass Burn and RDF Systems- Composition and calorific value of fuels and waste, Determination of the stoichiometric air consumption, Calculation of the flue gas composition - grate firing designs, boiler design, removal of bottom ash, heat recovery- Emission Controls - flue gas cleaning, de-dusting, flue gas scrubbers, DeNOx processes, dioxins and furans - Alternative thermal processes: coincineration, pyrolysis, gasification, plasma arc - Process characterization and control- waste heat recovery- Bottom ash: Quantity, quality, treatment, utilization, disposal- Facility designdecentralized mobile plants- Planning and construction of incineration plants. Case studies: Recycling technologies for paper, glass, metal, plastic - Used Lead Acid Battery Recycling -End of Life Vehicle Recycling – Electronic Waste Recycling – Waste Oil Recycling.

#### Preamble

As a fastly growing country, India is flooded with very good numbers of small, medium and large sized industries. The liquid effluent generated from such industries would pose a great danger to the environment, if they are not managed properly. Hence, industrial wastewater management will be of great importance in maintaining the quality of the environment for sustainable living. This course work deals with characterization of industrial effluents, its impact on the environment, possible preventive measures against generation of wastes and treatment and reuse option for the generated wastewater.

#### Prerequisite

Course Outcomes

Knowledge on characterization of wastewater (18CE440), physico-chemical treatment and biological treatment.

| Course Outcomes |   |                      |  |  |  |  |
|-----------------|---|----------------------|--|--|--|--|
| On the suc      | cessful completion of the course, students will be able to  |                      |  |  |  |  |
| CO<br>Number    | Course Outcome Statement  | Weightage***<br>in % |  |  |  |  |
| CO1.            | Fix the characteristics of the wastewater generated from any industry and identify factors influencing their generation.                  | 10                   |  |  |  |  |
| CO2.            | Identify the means and methods to reduce the quantity of generation of wastewater by implementing Pollution Prevention programme.         | 20                   |  |  |  |  |
| CO3.            | Develop appropriate treatment systems for the wastewater generated from the industries.   | 20                   |  |  |  |  |
| CO4.            | Identify the possible recycling and reuse opportunities for the generated wastewater and residuals by employing suitable treatment units. | 20                   |  |  |  |  |
| CO5.            | Investigate the feasibility and benefits of individual, common and joint treatment of industrial wastewater.                              | 15                   |  |  |  |  |
| CO6.            | Suggest suitable treatment schemes for wastewater generated from specific industries based on their characteristics.                      | 15                   |  |  |  |  |

\*\*\* Weightage depends on Bloom's Level, number of contact hours.

| Complex Overt Responses | -  |
| Adaptation              | -  |
| Origination             | -  |

#### Sample Questions for Course Outcome Assessment\*\* Course Outcome 1(CO1):

- 1. Describe the typical impacts of industrial wastewater on water bodies.
- 2. Discuss the classification of wastewater generated from an industry.

#### Course Outcome 2(CO2):

- 1. Explain the importance of population equivalent of an industrial effluent.
- 2. Illustrate the good operating practices that would lead to pollution prevention.
- 3. Demonstrate the process of segregation and recovery of waste in waste volume reduction.
- 4. Perform a waste audit programme in an industry and highlight the various stages involved in it.

#### Course Outcome 3(CO3):

1. Compute the volume of equalization basin required for the following flow regime.

| Time<br>(hrs) | 02.00<br>04.00 | 00.90 | 08.00 | 10.00 | 12.00 | 14.00 | 16.00 |  | 20.00 | 22.00 | 24.00 |  |
|---------------|----------------|-------|-------|-------|-------|-------|-------|--|-------|-------|-------|--|

| Flow<br>rate<br>(m3/d)<br>8000<br>6000<br>9400 | 12,800<br>13,000 | 14,400<br>12,000 | 9600<br>11,000 | 8000<br>9000 | 8400 |
|--|------------------|------------------|----------------|--------------|------|
|--|------------------|------------------|----------------|--------------|------|

2. A wastewater is to be treated with activated carbon to remove residual COD. The following data were obtained from a laboratory adsorption study in which 1 g of activated carbon was added to a beaker containing 1 L of wastewater at selected COD values. Using these data, determine the more suitable isotherm.

| Initial<br>COD<br>(mg/L)          | 140 | 250 | 300 | 340 | 370 | 400 | 450 |
|-----------------------------------|-----|-----|-----|-----|-----|-----|-----|
| Equillibri<br>um<br>COD<br>(mg/L) | 5   | 12  | 17  | 23  | 29  | 36  | 50  |

3.A wastewater to be desalinized by reverse osmosis using a thin-film composite membrane. Determine the required membrane area, the rejection rate, and the concentration of the concentrate system.

| Flowrate                              | m3/d | 10,000    |
|---------------------------------------|------|-----------|
| Influent TDS                          | g/m3 | 2700      |
| Effluent TDS                          | g/m3 | 225       |
| Flux rate coefficient kw              | /sec | 1.5x 10-6 |
| Mass transfer rate<br>coefficient, ki | m/s  | 1.8x 10-6 |
| Net operating pressure                | Kpa  | 3000      |
| Recovery                              | %    | 86        |

#### Course Outcome 4 (CO4):

1. The sludge production having 96% moisture content from a wastewater treatment plant is 1000 kg on dry solid basis. The solid contain 70% volatile matter with a specific gravity of 1.02 and 30% mineral matter with a specific gravity of 2.5. Determine the volume of raw and digested sludge if reduction in volatile solids is 55% during digestion and moisture content of digested sludge is 92%.

2. Explain the quality requirements for wastewater reuse, suggest a treatment scheme to achieve the above for an Industrial effluent.

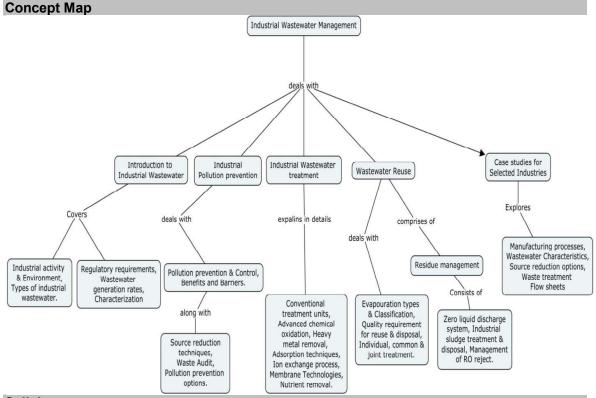

3. Explain the role of evaporates in achieving effluent quality requirements.

#### Course Outcome 5 (CO5):

- 1. Exhibit the positives and issues in the joint treatment of industrial waste with municipal waste.
- 2. Identify and explain favorable factors in the common effluent treatment facility.
- 3. Compare individual treatment with joint treatment and identify the challenges.

#### Course Outcome 6(CO6):

- 1. Choose the type of treatment required for wastewater generated from sugar mill and distilleries and justify your answers.
- 2. Interview the source reduction and wastewater treatment operations in a metal finishing industry.

#### Syllabus

Introduction to industrial wastewater: Industrial scenario in India - industrial activity and environment, uses of water by industry, sources and types of industrial wastewater. Regulatory requirements for treatment of industrial waste water, industrial waste survey, industrial waste water generation rates, characterization and variables, population equivalent. Industrial **Pollution Prevention:** Prevention Vs Control of industrial pollution – benefits and barriers. Source reduction techniques - waste audit, evaluation of pollution prevention options, environmental statement as a tool for pollution prevention, waste minimization circles. Industrial **Wastewater Treatment:** Equalization – neutralization, oil separation, flotation, precipitation, Aerobic and anaerobic biological treatment - sequencing batch reactors, high rate reactors(Recall) Advanced Chemical oxidation – Electro chemical oxidation, wet air oxidation, ozonation, photocatalysis, Other Treatment Processes Heavy metal removal, Refractory organics separation by adsorption. ion exchange, membrane technologies, nutrient removal. Wastewater Reuse and Residual management: Evaporation- Evaporators types and classification. Zero effluentdischarge systems - Quality requirements for wastewater reuse, industrial reuse, disposal on water and land. Residuals from industrial wastewater treatment units - quantification and characteristics of sludge - thickening, digestion, conditioning, dewatering and disposal of sludge. Management of RO rejects. Individual and common effluent treatment plants - combined treatment of industrial waste water and domestic/municipal wastewater. Case Studies: Industrial manufacturing process description, waste water characteristics, source reduction options and waste treatment flow sheet for textiles, tanneries, pulp and paper, metal finishing, sugar and distilleries.

### Preamble

This course provides an overview of various theoretical perspectives, debates and research practices inurban ecology, urban ecosystems, and urban sustainability. This course work covers the concept of sustainable management especially in the urban environment. The future of Urban ecosystems and managing the climate change through the concept of future proofing is also addressed.

#### Prerequisite

Ecology &Environmental Science (18CHAA0) and Wastewater Engineering (18CE440) Course Outcomes

| On the successful completion of the course students will be able to |  |                      |  |  |  |  |  |
|---|--|----------------------|--|--|--|--|--|
| CO<br>Number  | Course Outcome Statement   | Weightage***<br>in % |  |  |  |  |  |
| CO1   | Explain the concept of sustainable development in the urban perspective  | 10                   |  |  |  |  |  |
| CO2   | Introduce the importance of environmental sustainability   | 10                   |  |  |  |  |  |
| CO3   | Describe the concept of urban ecology and its framework  | 25                   |  |  |  |  |  |
| CO4   | Apply the Urban water management tools and models  | 25                   |  |  |  |  |  |
| CO5   | Illustrate the present scenario in wastewater management<br>and to introduce Eco friendly techniques in managing the<br>same | 20                   |  |  |  |  |  |
| CO6   | Develop the future urban ecosystems keeping the climate change as a constraint   | 10                   |  |  |  |  |  |

On the successful completion of the course students will be able to

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

| Origination             | -   |

#### Sample Questions for Course Outcome

#### CourseOutcome1(CO1):

- 1. Describe the Principles of Sustainable Development.
- 2. List the Millennium Development Goals.

#### Course Outcome2 (CO2):

- 1. Discuss the economic dimensions of Urban sustainability.
- 2. Explain the Ecological Foot Print.

#### CourseOutcome3 (CO3):

- 1. Discuss the various theories of Urban Ecology.
- 2. Describe concept of Ecocity

#### Course Outcome 4 (CO4):

- 1. Apply the concept of IWRM to your city and comment on the outcome.
- 2. Solve the Interstate water disputes using IWRM concept.

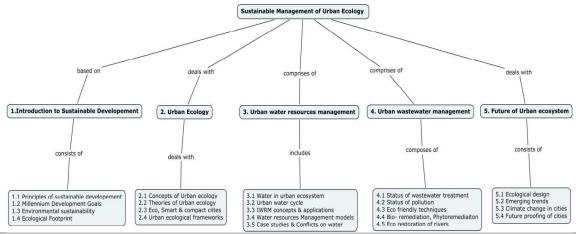

### Course Outcome 5 (CO5):

- 1. Sequence the status of wastewater generation, collection, treatment and disposal in the country.
- 2. Describe the impacts of improper disposal sewage on eco system

#### CourseOutcome6 (CO6):

- 1. Produce the results of Future Proofing Cities done for Madurai city and comment on it.
- 2. How to adapt the climate change impacts in Cities?

## Preamble

Selection of appropriate equipment based on the requirements of project is crucial for completion of project at optimal cost and time. The mistakes during selection of equipment for any construction can be avoided by scheduling and optimising the construction equipment system productivity and making proper equipment financing decisions. This can be accomplished by understanding cost and life of equipment and its maintenance

# Prerequisite

Nil

#### Course Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Select an appropriate equipment for a specific purpose                            | 15                   |
| CO2          | timate various cost components of equipment for different specifications          | 15                   |
| CO3          | Adapt suitable financing methods by considering equipment replacement strategies  | 15                   |
| CO4          | Select the optimum productive equipment among available specifications            | 15                   |
| CO5          | Apply the concept of scheduling for horizontal and vertical construction projects | 15                   |
| CO6          | Explain the methodology of equipment maintenance program                          | 10                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

#### Sample Questions for Course Outcome Assessment\*\*

#### Course Outcome 1(CO1):

- 1. Identify the role of heavy equipment in construction.
- 2. Explain in detail about Excavating equipment with their classification and also the selection criteria.
- 3. Discuss the various activities for which a dozer can be used.

#### Course Outcome 2(CO2):

1. List the constituents of ownership cost.

- 2. Compare the depreciation in each year of the equipment's useful life for each of the above depreciation methods for the following wheeled front-end bucket loader:
  - Initial cost: Rs.148,000 includes delivery and other costs
  - Tire cost: Rs.16,000
  - Useful life: 7 years
  - Salvage value: Rs.18,000
- 3. Estimate hourly repair cost of the scraper in Example 2.3 for the second year of operation. The initial cost of the scraper is Rs. 1,86,000, tire cost Rs.14,000, and its useful life is 5 years. Assume average operating condition and 2000 h of operation per year.

#### Course Outcome 3(CO3):

- 1. Prepare a list of factors making lease an attractive option for financing.
- 2. Apply the equipment life stages and replacement decision making process in equipment intensive project for improving productivity.
- 3. Summarize "Renting" method of acquiring equipment for a project work.

#### Course Outcome 4 (CO4):

- 1. An 18–cubic yard dump truck has a loading time of 3 min, a travel time of 7 min, and the dumping and delay times of 5 min. Calculate the cycle time, optimum number of hauling units, and productivity.
- 2. List the assumptions in Peurifoy's method.
- 3. A Project related to a Pile Construction, the site engineer having 3 options of Backhoe equipment specification (B1, B2, and B3) to carry out this project. Analyze the different specification and select an optimum specification from project's productivity perspective.

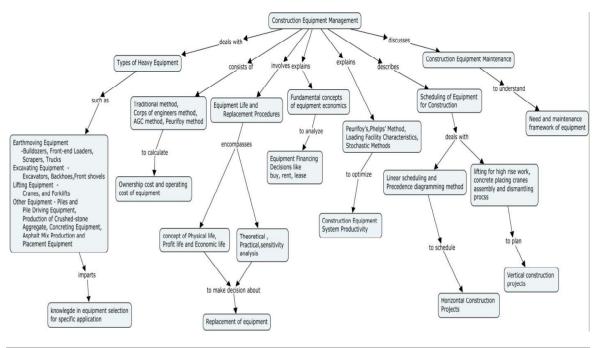

#### Course Outcome 5 (CO5):

- 1. Discuss the equipments for Vertical construction.
- 2. A Construction project involves prefabrication concept has been taken by your organization. For execution of this project needs various lifting equipments in the site. The Project team wants to know about the Lifting process, Strategies, Constraints and its productivity. As equipment manager how will you explain the methodology of this situation for effective execution of work in the site?

#### Course Outcome 6(CO6):

- 1. Explain the significance of a maintenance program
- 2. Discuss budgeting system in designing equipment maintenance program
- 3. Review the methodology of equipment maintenance program for a project.

#### **Concept Map**

#### Syllabus

**Role of Heavy Equipment in Construction**- Bulldozers, Front-end Loaders, Scrapers, Trucks, Excavators, Backhoes, Front shovels, Cranes, and Forklifts; Piles and Pile-Driving Equipment; Production of Crushed-stone Aggregate; Concreting Equipment; Asphalt Mix Production and Placement - Asphalt Plants, and Paving Equipment**Cost of Owning and Operating Construction Equipment** - Ownership cost, Depreciation, Operating cost, calculation methods; **Equipment Life and Replacement Procedures** - Physical, profit and economic life, Replacement analysis and selection, **Equipment Financing Decisions**–Fundamental Concepts of Equipment economics - Financing methods, Rental and lease contract considerations; **Optimizing Construction Equipment Productivity** - Peurifoy's method of optimizing productivity, Phelps' Method, Load growth curve, Stochastic methods for estimation of productivity; **Scheduling Equipment Intensive Projects** - Horizontal Construction-Linear scheduling method, Precedence diagramming method, Vertical Construction-lifting for high rise work, Erection-dismantling, concrete placing cranes;**Construction Equipment Maintenance**-Need and Designing a Maintenance Program

| TOCERJU | RESOURCES, SAFETY AND QUALITY |

| Category | L | Т | Ρ | Credit |
|----------|---|---|---|--------|
| PE       | 3 | 0 | 0 | 3      |

#### Preamble

This course will create awareness on the management of human resources, safety and quality for an organization; Impart knowledge on the functions, importance and various codes and standards available for managing human resources, safety and quality.

Prerequisite Nil

#### Course Outcomes

On the successful completion of the course, students will be able to

| CO<br>Number | Course Outcome Statement  | Weight<br>age<br>in % |
|--------------|---|-----------------------|
| CO1          | Explain the functions, process and importance of Human resource<br>Management in the Construction Industry  | 15                    |
| CO2          | Relate the grievances faced in a construction industry with the various codes and laws available in the human resource management and suggest suitable measures to solve them | 20                    |
| CO3          | Interpret responsibilities of parties in organizations and apply appropriate practices to ensure safety in organizations  | 15                    |
| CO4          | Solve the safety related crisis in construction using the Ergonomics and OSHA Codes and Standards   | 10                    |
| CO5          | Explain the Elements, Characteristics, and the importance of ISO 9000 codes and standards of Quality in Construction Industry   | 15                    |
| C06          | Compute the Quality of a product using statistical methods of quality control sampling technique  | 25                    |

| Adaptation              | -   |
| Origination             | -   |

#### Course Level Assessment Questions Course Outcome 1 (CO1)

- 1. Describe about manpower planning for Construction Companies.
- 2. Explain the ideas behind discipline and separation process in Construction Industry.

#### Course Outcome 2 (CO2)

- 1. As a HR manager of a firm suggest the new schemes you would implement for your labour to work in harmony
- 2. Relate the code of ethics and standards as per the norms in document with code of ethics and standards followed in the Organization of current scenario.

### Course Outcome 3 (CO3)

- 1. Summarize the role of various parties involved in Construction Safety Management.
- 2. An accident has happened to a worker due to struck in-between parts of machinery. As a safety manager for the industry what measures would you suggest to avoid occurrence of such incident in future.

#### Course Outcome 4 (CO4)

- 1. Prepare a safety audit report for a construction project highlighting some critical issues
- 2. Sketch a new tool for evaluating construction safety or an existing tool with a change of few parameters

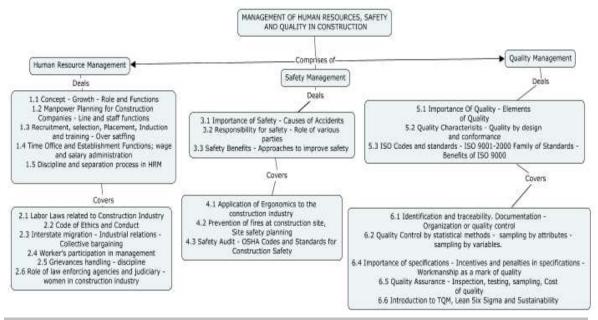

#### Course Outcome 5 (CO5)

- 1. Distinguish between quality by design and quality by conformance
- 2. Extend the ideas behind quality elements and characteristics with its importance

#### Course Outcome 6 (CO6)

- 1. Write the need for implementing Lean Six sigma principles in construction projects
- 2. Five defects are observed in 467 units produced. Calculate the short term and long term  $Z_{ST}$  and  $Z_{LT}$ , respectively. Also estimate the ppm value.

#### **Concept Map**

#### Syllabus

Human Resources Management - Concept - Growth - Role and functions. Manpower Planning for Construction Companies - Line and Staff functions - Recruitment, selection, placement, induction and training - over staffing; Time office and establishment functions; wage and salary administration - Discipline - Separation Process. Labor Legislation- labor laws related to construction industry - Code of Ethics and Conduct - Interstate migration - Industrial relations -Collective bargaining - Worker's participation in management. Grievances handling - discipline role of law enforcing agencies and judiciary - women in construction industry. Safety Management - importance of safety- causes of accidents - responsibility for safety - Role of various parties in safety management - safety benefits - approaches to improve safety in construction for different works Safety Implementation - Application of Ergonomics in the construction industry - prevention of fires at construction site - Safety audit, OSHA Codes and Standards for Construction Safety. Quality Management in Construction - Importance of quality - Elements of quality - quality characteristics - quality by design - quality conformance.ISO Codes and standards- ISO 9001-2000 Family of Standards- Benefits of ISO 9000- Quality Control and Assurance - identification and traceability for quality control. Documentation -Organization for quality control, Quality Control by statistical methods- Statistical Quality Control with sampling by attributes- Statistical Quality Control with sampling by variables - Importance of specifications- Incentives and penalties in specifications - Workmanship as a mark of quality. Quality assurance techniques - Inspection, testing, sampling, Cost of quality. Introduction to TQM, Lean Six Sigma and Sustainability.

# Preamble

This course focuses on the core principles of project procurement management, material planning and evaluation methods of materials consumed in various infrastructure domains. Students are exposed to effective techniques for successfully allocating risks and delivering projects which help in acquiring future projects.

# Prerequisite

# Nil

#### **Course Outcomes**

On the successful completion of the course, students will be able to:

| CO<br>Number | Course Outcome Statement   |    |  |  |
|--------------|--|----|--|--|
| CO1          | Explain the scope, functions, and importance of material procurement management in the construction industry                     | 10 |  |  |
| CO2          | Classify the materials of construction, compare the different sources of procurement, and conduct vendor analysis                |    |  |  |
| CO3          | Select and apply inventory control technique needed for the effective management of Inventory in the Construction Industry       | 15 |  |  |
| CO4          | Solve the problems on Economic ordering quantity considering orderpoint control, safety stock, stock outs and discounts          | 15 |  |  |
| CO5          | Apply site layout procedure and site organizational methods for the management of stores in the Construction Industry            | 10 |  |  |
| CO6          | Apply statistical methods of sampling technique to compute the quality of material   | 10 |  |  |
| C07          | Apply material management systems in planning, procurement, inventory and cost control of materials in the Construction Industry | 20 |  |  |

# Course Level Assessment Questions

# Course Outcome 1 (CO1)

- 1. Describe the role of material managers in Construction Companies.
- 2. Explain the ideas behind Integrated Approach to Materials Management.

# Course Outcome 2 (CO2)

1. Conduct an ABC analysis for the items shown in the table. Suggest suitable storage locations for A, B and C Category of items in a warehouse. Also construct the ABC analysis chart

| Item Code | Cost/ Unit (Rs) | Annual Usage (Units) |
|-----------|-----------------|----------------------|
| K1        | 25              | 10000                |
| K2        | 8               | 18000                |
| K3        | 18              | 14000                |
| K4        | 70              | 200000               |

| K5  | 12 | 9000   |
|-----|----|--------|
| K6  | 10 | 40000  |
| K7  | 10 | 122000 |
| K8  | 15 | 80000  |
| K9  | 4  | 10000  |
| K10 | 18 | 80000  |
| K11 | 7  | 5620   |
| K12 | 2  | 8020   |
| K13 | 7  | 9900   |
| K14 | 13 | 75000  |
| K15 | 12 | 5875   |
| K16 | 5  | 7500   |
| K17 | 32 | 8000   |
| K18 | 70 | 800    |
| K19 | 15 | 2450   |
| K20 | 6  | 1250   |
|     |    |        |

2. As a material manager of a firm, discuss the procedure you would adopt for identification of selection of appropriate vendor for purchase of inventory. Give suitable justification

# Course Outcome 3 (CO3)

- 1. List few inventory control policies you would suggest in your organization to satisfy Customers. Also demonstrate the implementation of one inventory policy for achieving maximum satisfaction of customers.
- 2. Mention the importance of selective inventory control in industry

# Course Outcome 4 (CO4)

- 1. A brick supplier has to supply 25, 00,000 bricks to his client per year. Shortages of about 5 % are allowed. The set-up cost per run is Rs 2250. Determine the following:
  - i) The economic ordering quantity ii) the optimum number of orders per year
  - iii) Maximum number of shortages iv) The optimum period of supply per optimum order
  - v) The increase in total cost associated with ordering

2. As an inventory manager, discuss the techniques you would adopt in your industry to control inventory so as to achieve economy. Give suitable reasons

# Course Outcome 5 (CO5)

- 1. Discuss about the inspection procedures followed in the construction stores.
- 2. Extend the ideas behind site layout and site organizational method in store management

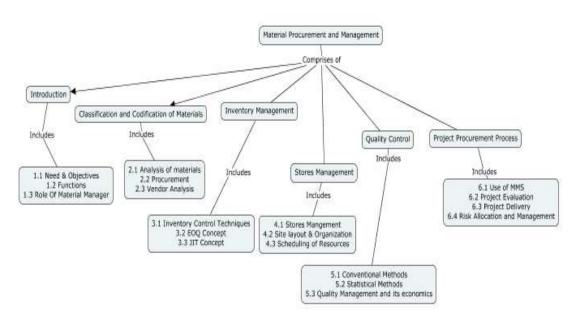

# Course Outcome 6 (CO6)

- 1. Five defects are observed in 467 units produced. Calculate the short term and long term Z<sub>ST</sub> and Z<sub>LT</sub>, respectively. Also estimate the ppm value.
- 2. Identify and discuss the measures you would adopt to maintain quality in material management in your industry

# Course Outcome 7 (CO7)

- 1. As a material manager for a construction project, what do you think are the micro and macro factors? You should consider while planning for the materials in project. Discuss giving the reasons
- 2. As an infrastructure engineer suggest suitable measures of identification and management of risks in relation to material management taking a project of your choice

# Concept Map

# Syllabus

**Introduction:** Importance of material management and its role in construction industry, scope, objectives and functions - Integrated approach to material management - Role of materials manager. Classification and Codification of materials of construction: ABC, FSN, VED, SOS analysis - Procedure and its use, Standardization in materials and their management, Procurement - Identification of sources of procurement, vendor analysis. Materials Requirement Planning (MRP), Purchase procedure, legal aspects. Inventory Management: Store Purchase Manual - Contractors Obligation - Inventory Control techniques - EOQ, Advantages and limitation of use of EOQ, Periodic ordering, order point control, safety stock, stock outs, Application of ABC analysis in inventory control, Just in Time (JIT) Management, Indices used for assessment of effectiveness of inventory management. Stores Management: Receipt and inspection, care and safety in handling, loss on storage, wastage, Bulk purchasing, site layout and site organization, scheduling of men, materials and equipment. Quality Control - Conventional methods of quality control of Construction materials. Statistical methods of quality control, sampling techniques in guality control process - Quality management and economics. Project procurement processes. Materials Management Systems (MMS) and its scope in materials planning, procurement, inventory control, cost control etc. Project evaluation: Discounted Cash Flow, Real Options Theory - Project delivery methods, Competitive bidding- Risk allocation and management - Integrated project delivery - Contract negotiation.

# Preamble

This course will create awareness on contracts for construction Industry; Impart knowledge on tender preparation, tendering process, Labour regulations, laws on arbitration, arbitration procedure and laws on dispute resolution in India. **Prerequisite** 

Nil

# **Course Outcomes**

On the successful completion of the course, students will be able to:

| CO<br>Number | Course Outcome Statement  | Weightage<br>in % |
|--------------|---|-------------------|
| CO1          | Explain the types, essentials and various clauses of construction<br>Contracts with their legal aspects and provisions                      | 5                 |
| CO2          | Prepare the tender and contract document based on the technical,<br>contractual and commercial perspectives of the construction<br>industry | 15                |
| CO3          | Solve the issues related to tendering and contracting process in the construction industry  | 20                |
| CO4          | Discuss the need and importance of labour regulations in the construction industry  | 15                |
| CO5          | Suggest suitable type of Alternate dispute resolution for the given situational problem in the Construction Industry                        | 25                |
| CO6          | Illustrate the rules, proceedings and background of Arbitration in the Construction Industry  | 20                |

#### **Course Level Assessment Questions**

#### Course Outcome 1 (CO1):

Discuss the important clauses of the contract document. State the factors which differ in contracts and agreement.

# Course Outcome 2 (CO2)

Prepare a sample of tender document showing the things needed in tender notice The highway department of government is planning to construct a new highway line in a city, as a chief engineer of the department you are vested with the responsibility of preparing tender documents for calling for tenders to invite prospective bidders to take up the work. Identify the items to be included in the tender documents and discuss them.

# Course Outcome 3 (CO3)

- 1. For a proposed nuclear reactor projectin India involving huge sum of money suggest a suitable type of contract. Give justifications for your choice.
- 2. As a contract manager identify the method to select a project based on contract document and issues.

# Course Outcome 4 (CO4)

- 1. Discuss the salient features of laws related to construction industry.
- 2. Describe the necessity of trade union in Construction Industry.

# Course Outcome 5 (CO5)

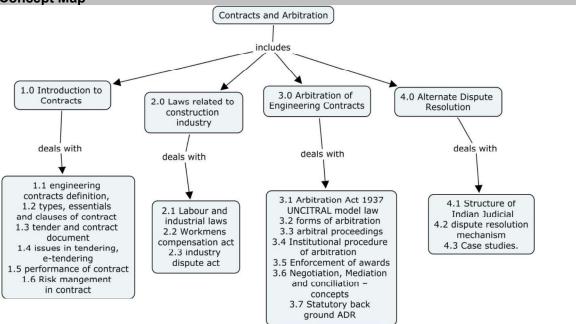

- 1. Suggest a specific Alternate Dispute Resolution with the justifications for solving interlinking of rivers in India.
- 2. In the republic country, the dispute arose between the state provinces. As a ContractManager how will you perceive the problem? Suggest Suitable ADR method for Resolving the dispute between the states and explain the procedure to conduct theSame.

# Course Outcome 6(CO6)

1 As an arbitrator discuss the procedural difference between a judge and an arbitrator. Who is more powerful in what situation? Discuss

2 As a manager, do you think the knowledge on contracts and arbitration is essential? Justify with suitable reasons taking a project of your own choice.

# **Concept Map**

# **Syllabus**

**Introduction to contracts** in construction industry: Brief details of Engineering contracts – definition, types and essentials of contracts and clauses for contracts – Preparation of tender and contract documents – prequalification, bidding, accepting, evaluation of tender form – technical, contractual and commercial point of view and standard contract documents – International contract document, World bank procedures and guidelines, Law of Torts – Issues related to tendering process- Awarding contract, e-tendering process - Time of performance – provisions of contract law – Breach of contract. Performance of Contracts – Discharge of a contract- Indian Contract Act 1872 – Risk management in contracts. Laws related to Construction Industry – Labour and industrial laws - payment of wages act, contract labour – Workmen's compensation act – Insurance and safety regulations, Industrial dispute act, Indian factory act, Child labour act and other labour laws. Alternate Dispute resolution – Litigation in Indian courts, Dispute resolution mechanism under the Indian judicial System. Arbitration,

**Negotiation, Mediation and Conciliation** – concepts and purpose, Statutory back ground ADR and mediation rules, duties of mediator and disclose facts, power of court in mediation, Case studies, Duties of conciliator and negotiator. **Arbitration of Engineering Contracts** – Background of Arbitration in India, The Arbitration and conciliation Act 1996, UNCITRAL model law, Forms of arbitration – arbitration agreement, subject matter and violations, Commencement of arbitral proceedings, constitution of arbitrat tribunal, appointment of arbitrator and rules of evidence, Institutional procedure of arbitration, Independence of arbitrators jurisdiction of arbitrat tribunal, Interim measures, Enforcement of awards and cost.

# Preamble

Design of reinforced concrete structures started in the beginning of last century following purely empirical approach. Thereafter came the so-called rigorous elastic theory where the levels of stresses in concrete and steel are limited so that stress-deformations are taken to be linear. However, the limit state method, though semi-empirical approach, has been found to be the best for the design of reinforced concrete structures. This course offers analysis and design of reinforced concrete structures. It aims at determination of safe as well as economical sections and their reinforcement under various types of load combinations. At the end of the course, student has a comprehensive design knowledge related to structures and systems that are likely to be encountered in professional practice **Prerequisite** 

18CE610 Design of Reinforced Concrete Elements Course Outcomes

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Analyse and design the slabs based on Yield line theory and other flat and grid floor slab systems and detail the reinforcement | 20                   |
| CO2          | Analyse and design the building frames by approximate methodsand detail the reinforcement                                       | 15                   |
| CO3          | Design the foundation and detail the reinforcement  | 15                   |
| CO4          | Design the staircases and detail the reinforcement  | 10                   |
| CO5          | Design the retaining walls and detail the reinforcement   | 15                   |
| CO6          | Design the water tanks and detail the reinforcement   | 25                   |

On the successful completion of the course students will be able to

Sample Questions for Course Outcome Assessment\*\*

# Course Outcome 1 (CO1):

- 1. Explain virtual work method.
- 2. Make use of yield line theory and analyse a one way continuous slab and determine the collapse load by using virtual work method and also equilibrium method.
- 3. Make of IS codal provisions, design the flat slab for an office building having the interior panel of size 6.5m x 6.5m. The size of the column is 300mm diameter. Super imposed load is 5 kN/m<sup>2</sup>. Floor finishes = 1.5 kN/m<sup>2</sup>. Partition walls = 2 kN/m<sup>2</sup>. Use M20 & Fe415 as materials.Draw the reinforcement details.

# Course Outcome 2 (CO2):

- 1. What are the assumptions made in portal method of analysis of frames?
- 2. Make use of portal method and analyse a multi-storey building frame, which has three equal bays of 3.5m each and two floors. The height between floors is 4m. The wind loads acting at roof (top floor) and first floor levels are H1=50kN and H2=25kN respectively. The columns and beams are having the same cross section. Compute the forces and moments in columns and beams.
- 3. A multi-storey building frame has two bays and two floors. The height between floors is 5m. The lengths of first and second bays are 4m and 6m respectively. The wind loads acting at roof (top floor) and first floor levels are H1=75kN and H2=50kN respectively. The columns and beams are having the same cross section. Analyse the frame and design any one beam in the frame usingcantilever method.Draw the reinforcement details.

# Course Outcome 3 (CO3):

- 1. What are the IS codal provisions for the design of longitudinal and lateral reinforcement for a pile?
- Make use of IS codal provisions, design a pile under a column subjected to an axial load of 900kN. The pile is to be driven to a hard stratum available at a depth of 6.5m. Use M20 grade concrete and Fe415 grade steel reinforcement. Draw the reinforcement details also.
- 3. Make use of IS codal provisions, design a pile cap connecting three piles of size 300mm in diameter used to support a column at the CG of the section subjected to a load of 700kN. The centre-to-centre distance between the piles is 1.60m. Use M20 and Fe415 as materials. Draw the reinforcement details.

# Course Outcome 4 (CO4):

- 1. Define the terms: rise and tread
- 2. Make use of limit state method, design a dog-legged staircase required for an institutional building having a clear roof height of 3.60m. The size of staircase room is 3m x 6.5m The thickness of roof is 125mm. The live load on the staircase is 3kN/m<sup>2</sup>. Consider other dead loads also. Use M20 and Fe415 as materials. Draw the reinforcement details also
- 3. Make use of limit state method, design a single flight staircase required for a residential building having a clear roof height of 4.0m. The thickness of roof is 125mm. The live load on the staircase is 3kN/m<sup>2</sup>. Consider other dead loads also. Use M20 and Fe415 as materials. Draw the reinforcement details also.

# Course Outcome 5 (CO5):

- 1. What is the purpose of providing shear key to the retaining wall?
- 2. Analyse and check the stability of cantilever type retaining wall against overturning, sliding and maximum pressure at toe end using the following data. Height of earth to be retained above the GL: 5.0m; Density of earth: 18 kN/m<sup>3</sup>; Angle of internal friction: 30<sup>o</sup>;

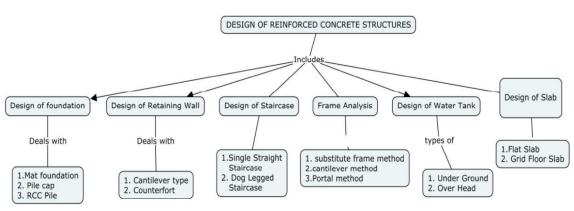

SBC of soil: 230 kN/m<sup>2</sup>; Coeff. of friction between soil and concrete: 0.5; Surcharge load:  $10 \text{ kN/m}^2$ .

 Analyse and also check the stability of counterfort type retaining wall against overturning, sliding and maximum pressure at toe end using the following data. Height of earth to be retained above the GL: 8.0m; Density of earth: 18 kN/m<sup>3</sup>; Angle of internal friction: 30<sup>o</sup>; SBC of soil: 240kN/m<sup>2</sup>; Coeff. of friction between soil and concrete: 0.5; Surcharge load: 10kN/m<sup>2</sup>.

# Course Outcome 6 (CO6):

- 1. Define the term: Meridional thrust.
- 2. Make use of IS codal provisions, design a circular water tank resting on ground with flexible joint at base storing water of capacity of 300000 litres. The depth of water tank including a free board of 200mm is 3.5m. Use M20 and Fe415 as materials.Draw the reinforcement details also.
- Make use of IS codal provisions, design the sidewalls and ring beam at the junction of sidewalls & top dome of an elevated circular water tank for a capacity of 250,000 litres. Use M25 and Fe500 grade materials. Draw the reinforcement details also.

# Concept Map

# Syllabus

**Slabs**: Yield line theory - Equilibrium and virtual work method - Analysis and design of square, rectangular and circular slabs; Flat slab and grid floor system; Reinforcement detailing. **Building frames**: Approximate methods - Substitute frame method, Portal and Cantilever methods - Analysis and design of frame components; Reinforcement detailing. **Foundation**: Design principles of mat foundation, Design of piles and pile caps; Reinforcement detailing. **Staircases:** Single flight and dog-legged staircases, Stairs with stringer beams; Reinforcement detailing. walls; Reinforcement detailing. **Water tanks**: Tank resting on ground, underground water tanks and elevated circular water tank; Reinforcement detailing.

DESIGN OF STEEL STRUCTURES

| Category | L | Т | P | Credit |
|----------|---|---|---|--------|
| PE       | 3 | - | - | 3      |

# Preamble

This course offers the design of steel structures as per limit state method. This course follows the recommendation of IS: 800 – 2007. It aims at determination of safe as well as economical steel components such as plate girders, gantry girders and beam columns. This course also expose the student to IS: 875 provisions for various load calculations. The design of roof truss using rolled and tubular section using IS: 800-2007 is covered in this course. Framed connections such as beam to beam, beam to column connection are also dealt in this course. **Prerequisite** 

18CE220-Engineering Mechanics, 18CE320-Mechanics of Solids, 18CE530-Design of Steel Structures

# Course Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Design a Plate girder with intermediate stiffeners and longitudinal stiffeners using the IS800-2007 Provisions.             | 20                   |
| CO2          | Analyse and design a gantry girder for its maximum load effects and fatigue effects.  | 15                   |
| CO3          | Evaluate the capacity of column subjected to combined axial compression and bending moment.                                 | 10                   |
| CO4          | Calculate all the possible loads on the roof truss and Design the purlins & roof truss members using rolled steel sections. | 20                   |
| CO5          | Design the tubular purlins and tubular roof truss members for the possible effects.   | 15                   |
| CO6          | Design the framed connection for beam to beam and beam to column connections  | 10                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours.

#### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

# Course Outcome 1(CO1):

- 1. What is the difference between plate girder and beam?
- Determine the buckling resistance moment for a welded plate girder consisting of 500 x 25 mm flange plates and a 1250 x 12 mm web plate in grade 410 steel. Assume a laterally unbraced span of 5.5 m.
- 3. Design a welded plate girder for a simply supported bridge deck beam with clear span of 20 m subjected to the following:
  - i. Dead load including self weight = 20 KN/m
  - ii. Imposed load = 10 KN/m
  - iii. Two moving loads = 150 KN each spaced 2 m apart

Assume that the top compression flange of the plate girder is restrained laterally

and prevented from rotating. Use mild steel with fy=250 MPa. Design as an unstiffened plate girder with thick webs and also redesign same with intermediate stiffeners utilizing tension field action.

# Course Outcome 2(CO2):

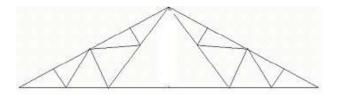

- 1. Design a gantry girder without lateral restraint along its span, to be used in an
  - Industrial building carrying over head traveling crane for the following data:
    - i. Centre to centre distance between columns = 6 m (span of the gantry girder)
    - ii. Crane capacity = 50 KN
    - iii. Self weight of the crane girder excluding trolley = 40 KN
    - iv. Self weight of the trolley, electric motor, hook etc., = 10 KN
    - v. Minimum hook approach = 1 m
    - vi. Wheel centres = 3 m
    - vii. Centre to centre distance between gantry rails = 12 m ( span of crane)
    - viii. Self weight of rail section = 100N/m
    - ix. Yield stress of steel = 250 MPa.
- 2. Why are simply supported girders preferred to two span gantry girders?
- 3. List the loads that should be consider while designing a gantry girder.

# Course Outcome 3(CO3):

- 1. How can load deflection effects be considered in the design of beam columns?
- 2. A beam column of length 5 m is subjected to a compression of 800 KN and a major axis moment of 4.5 KNM. The weaker plane of the column is strengthened by bracing. If the effective length factor is 0.8, design the beam column, assuming Fe 410 grade steel.
- 3. A beam column of length 4.5m is subjected to a compression of 850kN and a major axis moment 40kN-m. The weaker plane of the column is strengthened by bracing. If the effective length factor is 0.8, design the beam column, assuming Fe-410 grade steel. Use two channels welded together to form a box section. No need to design for the welding of the two channels.

# Course Outcome 4 (CO4):

1. A fink roof truss is proposed to be constructed at Chennai. The pitch of the roof is  $1/_{4.5}$  for a span of 20m. The trusses are spaced at 4.5m c/c. use GI sheeting. The height of the roof above the ground level is 12m. The configuration of the girder is given in figure-

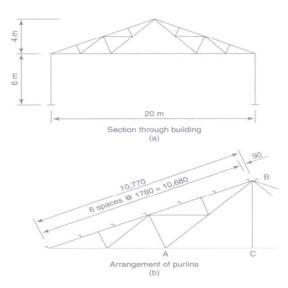

2. The following are the critical loads. Use Fe 410 grade steel. ISMC 150 purlins are placed only on the nodes. The truss is supported on a RCC column of size 450 x 450 mm of M30 grade concrete. Design the ridge connection and the base connection.

| Members                   | Critical Forces in Kn |         |  |
|---------------------------|-----------------------|---------|--|
|                           | Compression           | Tension |  |
| Principal Rafter          | 85                    | 65      |  |
| Tie Member                | 65                    | 97.5    |  |
| Main Sling & Main Strut   | 30                    | 33.5    |  |
| Minor sling & Minor Strut | 22.5                  | 24      |  |

- 3. How Channel purlin will behave in DL+LL and DL + WL load combinations?
- 4. Design a channel purlin for fink type roof truss using the following data:
  - a. Spacing of roof truss 4.5 m
  - b. Spacing of purlin along sloping length 1.4 m
  - c. Maximum DL = 5kN(C); LL = 3kN(C) and WL= 11kN(T)

# Course Outcome 5 (CO5):

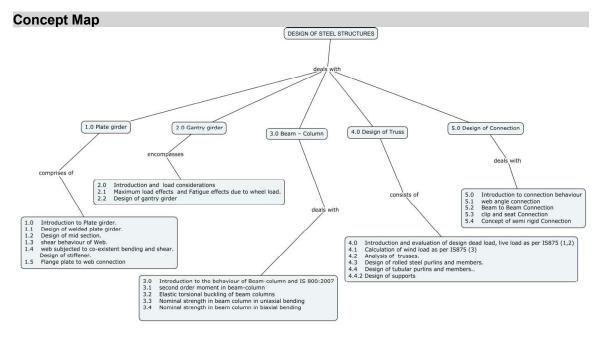

1. An industrial building is shown in fig. the frames are at 5m centres and the lengthof the building is 40m. The purlin spacing of the roof is as shown in figure-1. TheBuilding is situated in Delhi. Assume live and wind loads as per IS875 (part 2 andPart 3) and the roof is covered with GI sheeting. Design the roof truss using anglemembers and gusseted joints. The truss is to be fabricated using welded joints intwo parts for transport and assembled at site using bolted joints at A,B and C as shown in figure-1(b).

- 2. List out various elements of the roof truss and mark all its significance.
- Estimate the capacity of the tubular principal rafter subjected to a compression of 125kN and a tensile force of 80 kN under the reversal effect. The member also subjected to a bending effect of 15kN-m under DL+LL and 9kN-m under DL+WL. Use Yst240 (Yst25)

#### Course Outcome 6(CO6):

- 1. Evaluate the bolted web cleat connection between a main beam ISMB300 and a coped beam of size ISMB250 which transfers a load of 50kN maximum reaction. Use M16 bolts of Gr.8.8.
- 2. Explain the force transfer mechanism of top and seat connection.
- Evaluate the bolted top and bottom seat connection between a main beam ISMB400 and a column of size ISMB500 which transfers a load of 200kN maximum reaction. Use M16 bolts of Gr.8.8

#### **Syllabus**

Plate girder- Introduction to Plate girder, Difference between beam and plate girder, Design of welded plate girder, Proportioning of web and flange plates, Design of mid-section, Curtailment of flange plates, shear behaviour of transversely unstiffened and stiffened web ,web subjected to co-existent bending and shear, transverse web stiffener, Bearing stiffener ,end bearing stiffener and load bearing stiffener, Longitudinal web stiffener, Flange plate to web connection, Splices - Flange and web.**Gantry girder**: Introduction, load considerations, max load effects, Fatigue effects, Determination of maximum bending moment and shear force due vertical component of crane wheel load, horizontal component of crane wheel load, longitudinal effect of wheel load, Design of gantry girder, Connection in gantry girder . **Beam – Column**: Introduction, behaviour of beam-column, second order moment in beam-column, Elastic torsional buckling of beam columns, Nominal strength in beam column in uniaxial bending, Biaxial bending. **Design of Truss**: Introduction, Evaluation of design dead load, live load , wind load. Review of analysis of truss. **Design of Truss using Rolled steel sections**: Purlins, truss members, Supports. **Design of Beam column Connection:** Introduction, web angle connection, Beam to Beam Connection, Beam to

column connection, web angle connection and clip and seat Connection, Concept of semi rigid Connection.

# **Indian Standard Codes**

- 1. IS: 800 2007, Code of Practice for general construction in steel, BIS, New Delhi
- 2. SP 6 (1) Structural steel sections
- 3. IS 875 (1-5) 1987 Code of practice for Design Loads (Other than Earthquake) for Buildings and Structures, BIS
- IS 816 :1969 Code of practice for Metal Arc Welding for general Construction in Mild Steel, BIS
- 5. IS 1161:1998 Steel tubes for structural purposes specifications, BIS.
- IS: 808 1989 Dimensions For Hot Rolled Steel Beam, Column, Channel and Angle Sections.

# Learning Resources

- 1. Teaching Resource for Structural Steel Design, Vol. 1,2,3 (2000), INSDAG- Institute for Steel Development and Growth, Kolkatta.

# Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

# Course Outcome1(CO1):

- 1. Mention various types of contracts
- 2. Write the essentials of contract
- 3. Discuss the essentials and clauses of contract

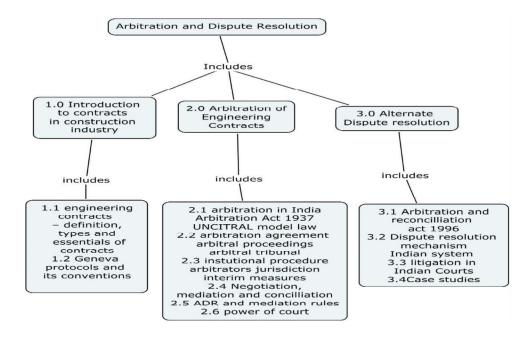

# Course Outcome2(CO2):

- 1. Differentiate between Negotiation, mediation and reconciliation.
- 2. Explain the dispute resolution mechanism in Indian system.
- 3. There is a dispute between the contractor and the funding organization of a project on interpretation of quantum of work for payment of wages to the contractor. As an arbitrator for this case, discuss the procedure and powers you would exercise to settle the dispute in an unbiased manner.

# Course Outcome3(CO3):

- 1. Explain the litigation in the Indian courts on disputes.
- 2. A highway is under distress which requires repair. The repair is to be let out as contracting work by calling for tenders. Identify a suitable type of contract that can be undertaken for the repair work with suitable reasons.

# **Concept Map**

# Syllabus

**Introduction to contracts in construction industry:** Brief details of engineering contracts – definition, types and essentials of contracts, – brief details of Geneva protocols and its conventions. **Arbitration of Engineering Contracts** – Background of Arbitration in India, Indian Arbitration Act 1937, UNCITRAL model law, **forms of arbitration** – arbitration agreement, Commencement of arbitral proceedings, Constitution of arbitral tribunal, Institutional procedure of arbitration, Impartiality and independence of arbitrators jurisdiction of arbitral tribunal, Interim measures, Enforcement of awards. Negotiation, Mediation and conciliation – concepts and purpose, statutory back ground ADR and mediation rules, Duty of mediator and disclose facts, Power of Court in mediation. **Alternate Dispute resolution** - Structure of Indian Judicial, The arbitration and reconciliation ordinance 1996, The dispute resolution mechanism under the Indian judicial System, Litigation in Indian courts, case studies.

# Learning Resources

- 1. B.J. Vasavada, "Engineering Contracts and Arbitration", Jubilee Publications, 1996
- 2. Roshan Namavati, "Professional Practice", Lakhani Book Depot, 2013

# Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

# Course Outcome1(CO1):

- 1. Write the meaning of green construction mentioning its need
- 2. Discuss the various aspects and measures taken to make a building green
- 3. Enumerate the salient features of green certification systems with purpose

# Course Outcome2(CO2):

- 1. List few materials used in green construction
- 2. Relate sustainability with green construction with reasons
- 3. As a civil engineer having the knowledge on green construction, identify the material and technologies you would recommend for your buildings to attain sustainability. Discuss with suitable reasons

# Course Outcome3(CO3):

- 1. Discuss the principles of planning for green construction
- 2. Enumerate various innovative technologies for green buildings
- 3. Differentiate green and smart buildings with examples

# Course Outcome 4 (CO4):

- 1. Define desertification and its relation with sustainability
- 2. Identify strategies you would consider for implementation of an eco- development programme for Madurai city
- 3. With the knowledge of green construction materials identify suitable measures to minimize environmental impacts in construction projects

# Course Outcome 5 (CO5):

Relate development with environmental degradation

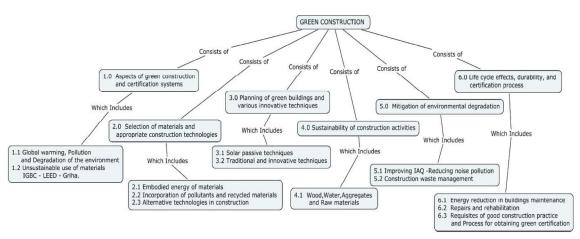

- 2. Suggest suitable scheme to protect and enhance the living environment in and around TCE campus
- 3. For an existing traditional building identify suitable technologies to convert it into a green building with cost effectiveness

# Course Outcome6(CO6):

Address Impact of Life cycle effects, durability and certification process

- 1. Compare GRIHA and IGBC rating systems
- 2. Discuss the measures/ schemes contributing to good construction practice
- 3. Enumerate the techniques you would implement for energy saving in your residence

# Concept Map

# Syllabus

Aspects of green construction and certification systems: Global warming - Pollution - Degradation of the environment - Unsustainable use of materials - IGBC - LEED - GRIHA. Selection of materials and appropriate construction technologies: Embodied energy of materials - incorporation of pollutants and recycled materials - alternative technologies in construction. Planning of green buildings and various innovative techniques: Solar passive techniques - traditional and innovative techniques. Sustainability of construction activities:

Wood - Water - Aggregates - Raw materials. **Mitigation of environmental degradation:** Improving IAQ - reducing noise pollution - construction waste management. **Life cycle effects, durability, and certification process:** Energy reduction in buildings maintenance - Repairs and rehabilitation - Requisites of good construction practice - Process for obtaining green certification.

PRECAST TECHNOLOGY IN BUILDINGS

| Category | L | Т | Р | Credit |
|----------|---|---|---|--------|
| PE       | 1 | 0 | 0 | 1      |

# Preamble

Precast is an industrialized way to build. It means transfer of work from sites to factories which improves productivity, quality and shortens construction time of a building. Precast also has lower lifetime costs than any other building solution. This is possible due to consistent high quality of industrially produced products.Precast suits well for any type of building namely; residential, commercial, industrial, public etc. This course gives an exposure on the need and importance of using precast technology along with awareness on the technology. **Prerequisite** 

Knowledge on building construction **Course Outcomes** 

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |  |  |  |  |
|--------------|---|----------------------|--|--|--|--|
| CO1          | Compare Precast and cast in-situ technology with implementation challenges                                    | 20                   |  |  |  |  |

# Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

# Course Outcome1(CO1):

- 1. Mention the need and advantages of using precast technology
- 2. Define the term modular co-ordination mentioning its purpose
- Discuss the challenges that would faced while implementing precast technology in relation to Indian context

# Course Outcome2(CO2):

- 1. Explain the details to be noted in the production of hollow core slabs
- Discuss the merits of hollow core slabs over solid slabs mentioning the applications of each
- 3. Enumerate the precautions to be taken in erection of hollow core slabs mentioning its need

# Course Outcome3(CO3):

- 1. Explain the points you would consider in planning of precast projects
- 2. As an engineer in-charge of precast installation illustrate the provisions and precautions you would consider in jointing of components

3. Discuss the machinery used with purpose in precast construction

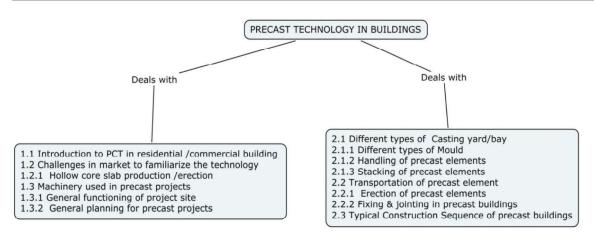

# Course Outcome 4 (CO4):

- 1. As an engineer discuss the process of stacking of precast units considering a specific unit with precautions to be taken
- 2. Discuss the points to be considered in transportation of precast units
- 3. Discuss the precautions to be taken while erection of precast elements

# Course Outcome 5 (CO5):

- 1. As an site engineer identify the sequence of fixing and jointing of wall panels in a buildings
- 2. Discuss the tolerances to be provided while fixing and jointing of precast elements
- 3. Discuss the good practices in jointing of elements

# **Concept Map**

# Syllabus

Introduction to precast technology in residential /commercial building - Challenges in market to familiarize the technology - Hollow core slab production /erection -Machinery used in precast projects -General functioning of project site -General planning for precast projects - Different types of Casting yard/bay - Different types of Mould - Handling of precast elements - Stacking of precast elements - Transportation of precast element - Erection of precast elements - Fixing & jointing in precast buildings - Typical Construction Sequence of precast buildings.

## Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

## Course Outcome1(CO1):

- 1. Mention the meaning of framed structures with its purpose
- 2. Discuss the load transfer mechanism in framed structures
- 3. Compare Frame structures with Normal Load bearing Traditional High Rise Building

#### Course Outcome2(CO2):

- 1. Discuss the structural behaviour of framed structures
- 2. Discuss the do's and dont's in detailing of RCC beam
- 3. By means of a sketch explain the points to be considered at the junction of framed structures

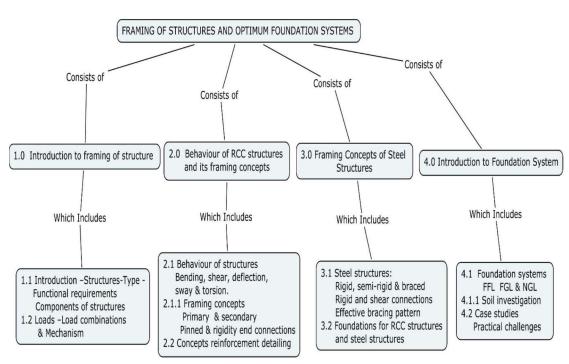

#### Course Outcome3(CO3):

- 1. Enumerate the precautions to be noted while designing steel framed structures
- 2. Discuss the behaviour of steel structural members in seismic prone areas
- 3. Draw and explain the junction details to be provided for steel and concrete structures

# Course Outcome 4 (CO4):

- 1. List the types of foundation systems to be used in framed structures
- 2. Discuss the guidelines to be used in design of optimum foundation systems for framed structures
- 3. Identify an appropriate foundation system for a framed structure in a seismic prone area and discuss the guidelines for construction

#### **Concept Map**

## Learning Resources

- 1. P. Purushothaman, "Reinforced Concrete Structural Elements: Behaviour, Analysis and Design", 1984, McGraw-Hill Inc.,US.
- 2. S.Unnikrishna Pillai, Devdas Menon, "Reinforced concrete design", 2005, Tata McGraw Hill Publishing Co. Ltd.
- 3. S.K.Duggal, "Design of Steel Structures", 2000, Tata McGraw Hill Education
- 4. IS 456: 2000: Code of Practice for Plain and Reinforced Concrete
- 5. IS 800: 2007: Code of Practice –General construction in steel.

#### **Course Contents and Lecture Schedule**

| 000130 0      | Somenus and Lecture Schedule   |                    |     |
|---------------|--|--------------------|-----|
| Module<br>No. | Topics   | No. of<br>Lectures | СО  |
| 1.0           | Introduction to framing of structure   |                    | CO1 |
| 1.1           | Introduction –Structures-Types- Functional requirements of structures and its components. Components of structures.        | 1                  | CO1 |
| 1.2           | Loads – appropriate Loading considerations in various structures. Load path and load transfer mechanism- Load combinations | 2                  | CO1 |
| 2.0           | Behaviour of RCC structures and its framing concepts   |                    |     |
| 2.1           | Behaviour of structures – Bending, shear, deflection, sway & torsion.  | 2                  | CO2 |
| 2.2           | Framing concepts -Primary beams & secondary beams concepts. Pinned & rigidity end connections                              | 1                  | CO2 |
| 2.2.1         | Concepts using reinforcement detailing with practical<br>implications in RCC structures                                    | 1                  | CO2 |

| Module<br>No. | Topics   | No. of<br>Lectures | СО  |
|---------------|--|--------------------|-----|
| 3.0           | Framing Concepts of Steel Structures   |                    |     |
| 3.1           | Framing concepts – steel structures-Rigid, semi-rigid &<br>braced Structures Rigid and shear connections of steel<br>beams – Effective bracing pattern | 2                  | CO3 |
| 3.2           | Foundation systems – overview- Explanation on Foundations for RCC structures and steel structures.   | 1                  | CO3 |
| 4.0           | Introduction to Foundation System  |                    | CO3 |
| 4.1           | Foundation systems –FFL (finished floor levels), FGL (Finished ground level), NGL (Natural ground level).  | 1                  | CO4 |
| 4.1.1         | Soil investigation report study- required inputs from soil investigation   | 1                  | CO4 |
| 4.2           | Overall Discussions/Q&A/ Case studies/Practical challenges<br>in design and construction   | 2                  | CO4 |
|               | TOTAL  | 14                 |     |

LARGE SCALE SYSTEMS

| Category | L | Т | Ρ | Credit |
|----------|---|---|---|--------|
| PE       | 1 | 0 | 0 | 1      |

# Preamble

The aim of this course is to sensitize the undergraduates about the basic concepts of systems engineering methodologies to approach the Socio-Techno problems in a holistic manner. This course will address the basic concepts of cause-effect impacts due to the interrelationships of components and elements of systems in a complex environment.

# Prerequisite

NIL

## Course Outcomes

| CO<br>Number | Course Outcome Statement  | Weightage***<br>in % |
|--------------|---|----------------------|
| CO1          | Identify tools for process of forecasting and assessment -the indented and unintended impacts on policies and technological solutions   | 25                   |
| CO2          | Participate and coordinate in group discussions in organizations.   | 20                   |
| CO3          | Understand the components and elements involved in DPR, FR, EIA, EMS and Resettlement & Rehabilitations programs.                       | 25                   |
| CO4          | Understand the problem situation for higher level policy discussion on any societal and technological issues seamlessly in all domains. | 30                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

# Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

#### Course Outcome1(CO1):

- 1. Define Systems?
- 2. Distinguish Boolean algebra and Conventional Martix
- 3. List the steps involved in value system design.

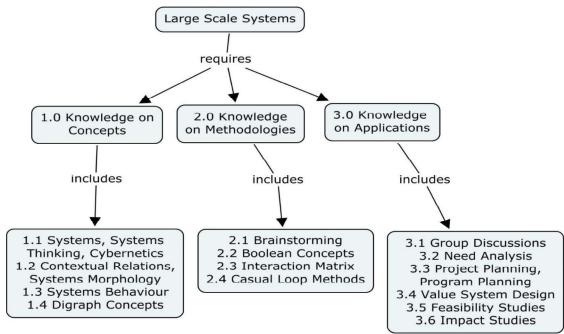

#### Course Outcome2(CO2):

- 1. Compare System and organism.
- 2. Discuss various components of System.

#### Course Outcome3(CO3):

- 1. Narrate any technology that interacts with society environment.
- 2. Identify the various needs to combat the educational challenges in India.
- 3. Draw the intent structures for education and energy supply.

#### **Concept Map**

# **Syllabus**

**Systems thinking:** Introduction, Problem Situation, Systems & Cybernatics, System Models, Hard/Soft Systems, Soft Systems Methodology, Soft System Examples/Case studies, Ashby's Requisite Variety Theory. **Systems Methodology and Planning:** Halls Morphological Box, Seven Phases of System Engineering, Seven Steps of System Engineering, Program Planning Linkage, Goals, Objectives, Constraints, Alterable, Measures etc., Example: Energy Supply and Demand, Value System Synthesis and Linkage. **Technology Forecasting and Assessment:** Philosophical Basis for TA/TF, Limits to growth model, Methodology in TA/TF- Brainstorming, Delphi, Relevance Tree Techniques, System Dynamics- Examples. **Theory of Constraints:** Fundamental Principles of the theory of Constraints, Understanding and Managing Constraints.

#### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

#### Course Outcome1(CO1):

- 1. Explain the types of walls in interiors
- 2. Explain the meaning of formal and informal design of walls
- 3. Define the terms: hardscape and softscape. Explain with examples

#### Course Outcome2(CO2):

- 1. Define Ergonomics and mention its need in corporate offices
- 2. Explain types of plants that can be used for interior decoration
- 3. Make use of interior concept, design the interior wall, floor and ceiling for a conference hall in an office of size 8m x10m. The ceiling height is 4m and a beam of 45cm depth runs through the shorter span at 3m intervals. Assume the window positions and sizes. Show the construction detail of the interior elements through proper sections

# Course Outcome3(CO3):

- 1. What is the difference between a particle board and plywood
- 2. Explain the different types of walls and classify it based on its material and application in interior design.
- 3. Explain the different types of floors and classify it based on its material and application in interior design.

#### Course Outcome 4 (CO4):

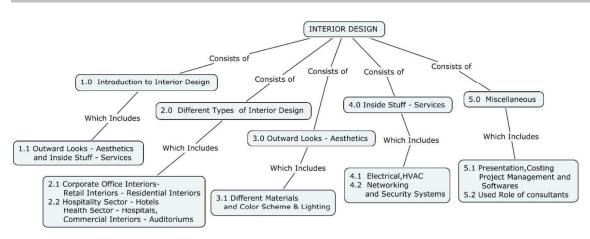

1. Illustrate the interior layout with proper space planning and lighting design for an art gallery of size 10m x 12m and height 4m.Specify the colour, texture and finishes of the wall, floor and ceiling

- Demonstrate the design of a wall mural as a background for the reception area of five star hotel lobby of size 10m x 10m and height 6m, applying the principles the interior design. Assume the necessary details. Specify and illustrate the materials and concept of your mural.
- 3. Expalin the differences between halogen lamps and fluorescent lamps

# Course Outcome 5 (CO5):

- 1. What is the need for knowledge on project management in interior design
- 2. What are the softwares to be used for interior designing and project management
- 3. Discuss the role of consultants in interior design

#### **Concept Map**

# Syllabus

Introduction to interior design: Outward looks - Aesthetics - Inside stuff - Services. Different types of Interiors: Corporate office interiors - Retail interiors - Residential interiors - Hospitality sector – Hotels - Health sector - Hospitals - Commercial interiors - Auditoriums etc. Outward Looks and Aesthetics: Different Materials - Color scheme - Lighting. Inside Stuff and Services: Electrical - HVAC - Networking - Security systems. Miscellaneous: Presentation - Project Management and Costing - Softwares used - Role of consultants.

# Preamble

This course will create awareness on geotechnical failures, causes, remedies and rehabilitation procedures.

# Prerequisite

# Knowledge on foundation failures **Course Outcomes**

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement   | Weightage***<br>in % |
|--------------|--|----------------------|
| CO1          | Understand the importance of site investigation and soil testing                             | 15                   |
| CO2          | Check the vulnerability of soils and understand the problems associated with expansive soils | 20                   |
| CO3          | Predict settlement related problems- immediate and consolidation settlement                  | 15                   |
| CO4          | Suggest appropriate ground improvement techniques  | 25                   |
| CO5          | Recommend appropriate underpinning methods   | 25                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

#### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

# Course Outcome1(CO1):

- 1. Mention the importance of subsoil exploration.
- 2. Explain the different field tests in geotechnical investigation.
- 3. What are all the lab tests in geotechnical investigation?

# Course Outcome2(CO2):

- 1. Define expansive soil.
- 2. How expansive soilsaffect the structure?
- 3. Discuss about the water fluctuation and soil strength vulnerability.

# Course Outcome3(CO3):

- 1. Define elastic or immediate settlement.
- 2. Discuss in detail about consolidation settlement.
- 3. What are all the factors affecting consolidation?

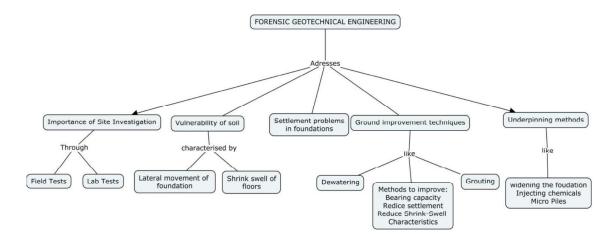

# Course Outcome 4 (CO4):

- 1. Why ground improvement studies are important for civil engineers?
- 2. Discuss about various lime treatments.
- 3. Discuss the grouting process.

# Course Outcome 5 (CO5):

- 1. Define and discuss underpinning and shoring.
- 2. How to improve the bearing capacity of soil bellow existing foundation?
- 3. Discuss about the micro piles and applications.

#### Concept Map

#### Syllabus

**Importance of Site Investigation**: Field tests - Lab tests **Soil vulnerability and Expansive Soils**: Atterberg's limits - Swell shrink behaviour - Lateral movement of foundation - Swell shrink of floors - **Settlement problems**: Elastic / immediate settlement - Consolidation settlement **Ground improvement techniques**: De-watering techniques - Methods to improve bearing capacity - Methods to alter swell shrink behaviour - Methods to reduce settlement - Grouting equipments and applications **Underpinning methods**: Increase the size of foundation - Additional Foundation with existing foundation - Injection of chemicals below the existing foundation - Micro piles and their applications – Case studies on underpinning of shallow and deep foundations, rehabilitation of earth retaining structures

#### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

#### Course Outcome1(CO1):

- 1. Define Faecal Sludge management
- 2. List the effects of improper sanitation
- 3. What is the global and national situation of on-site sanitation?

# Course Outcome2(CO2):

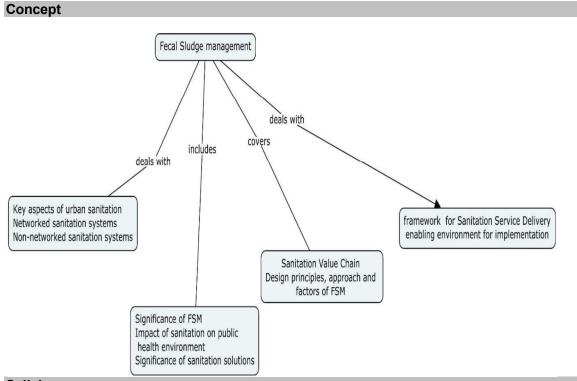

- 1. What should be considered when designing a financing scheme for sanitation systems?
- 2. What are the main characteristics of FS and what parameters are used to describe them?
- 3. Methods and Means for Collection and Transport of Faecal Sludge

## Course Outcome3(CO3):

- 1. What are the effluent standards for FS treatment plants?
- 2. What are the main processing steps in FSM?
- 3. What are the major technologies for solid-liquid separation and FS treatment?

## Course Outcome 4 (CO4):

- 1. Who are the stakeholders in faecal sludge management and what are their roles and challenges?
- 2. Write the importance of composting as form of sludge management in FSM

3. Draw the functional framework for sustainable solution of FSM

# Syllabus

Key aspects of urban sanitation situation in India (current sanitation situation, problems and challenges) – Networked and non-networked sanitation systems; Significance of FSM; Impact of sanitation on public health environment and economy (importance/Significance of sanitation solutions); Understanding the Sanitation Value Chain and Appropriate sanitation solutions and Design principles, approach and factors (what solution would work in different situations and why); Implementation framework for Sanitation Service Delivery and understanding enabling environment for implementation

# **Course Level Assessment Questions**

| Cours | se Outcome 1(CO1)  |
|-------|--|
| 1.    | Identify the linkages between Environment and Developmental activity.                          |
| 2.    | How will you link social sustainability to environmental and economic sectors?                 |
| 3.    | Trace the evolution of the concept of Sustainable Development.                                 |
| Cours | se Outcome 2(CO2)  |
| 1.    | Give an account of the international milestones in achieving goals of Sustainable Development. |
| 2.    | Discuss about the outcome of any two international summit of Sustainable Development.          |
| Cours | se Outcome 3(CO3)  |
| 1.    | Discuss the possibilities to achieve sustainability in agricultural sector.                    |

| Identify the barriers to achieve sustainability in natural resources management especially in Developing nations.   |
|---|
| se Outcome 4(CO4)   |
| How Sustainable Development canbe assessed?   |
| Discuss about the indicators of a countries development.  |
| Illustrate the history of Commission on Sustainable Development indicators.   |
| se Outcome 5(CO5)   |
| Enumerate the business-Industrial sector interaction in Sustainable Development   |
| Discuss in detail about the sustainable movements happened towards water resources management sector  |
| se Outcome 6(CO6)   |
| Suggest measures to tackle the inflated temperature (predicted) for May 2019.Construct a strategic plan to prevent 1 <sup>o</sup> C rise by 2100(this includes plans to reclaim all the effects of climate change to a state of equilibrium). |
| Considering the current world population, Identify its emerging risks in 21 <sup>st</sup> century (with respect to population, technology and resources) and suggest few sustainable solutions (general framework) in overcoming them.        |
|   |

| Adaptation              | -  |
| Origination             | -  |

#### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

#### Course Outcome1(CO1):

- 1. Discuss the Strategies and practices you will follow to build your own house as Green Building.
- 2. Discuss the need of rain water harvesting system in a building.

#### Course Outcome2(CO2):

- 1. Discuss the planning considerations to be made in buildings based on codal provisions on fire safety
- 2. Assume an IT building is to be constructed in a metropolitan area of 20,000 sq.m. The width of road in front is 15 m. Plan the building according to F.S.I and height restrictions. Justify your recommendations.

#### Course Outcome3(CO3):

- 1. Plan and draw an electrical layout for a residential building considering the essential electrical points in various rooms
- 2. Specify the minimum levels of illumination for different buildings as per NBC

#### Course Outcome 4 (CO4):

- 1. Suggest suitable fire-fighting installations needed for a commercial complex building of 4 floors.
- 2. Select a suitable wiring system for a building having a connected load of 500kW. Make suitable assumptions. Justify your selection.

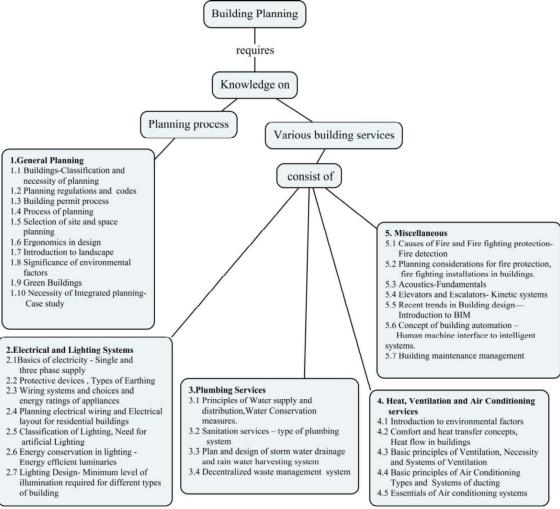

#### Course Outcome 5 (CO5):

- 1. Explain about the different systems of plumbing installed in buildings.
- 2. Based on the water Resources available in your area of living, construct the flowchart for the treatment of water to fit for Drinking purpose.

#### Course Outcome6(CO6):

- 1. Discuss the necessity of kinetic systems in buildings.
- 2. Write short notes on human machine interface and intelligence systems.

#### Concept Map

# Syllabus

**General Planning:**–Buildings-Classification and necessity of planning-Planning regulations and relevant codes- Building permit process- Process of planning- Selection of site and space planning - Ergonomics in design- Introduction to landscape- Significance of environmental factors- Green Buildings - Necessity of Integrated planning-Case study. **Electrical and Lighting Systems:**Basics of electricity - Single and three phase supply- Protective devices, Types of Earthing- Wiring systems and choices and energy ratings of appliances- Planning electrical

wiring and Electrical layout for residential buildings - Classification of Lighting, Need for artificial Lighting - Energy conservation in lighting - Energy efficient luminaries - Lighting Design-Minimum level of illumination required for different types of building. **Plumbing Services:** Principles of Water supply and distribution, Water Conservation measures-Sanitation services – type of plumbing system - Plan and design of storm water drainage and rain water harvesting system - Decentralized waste management system –wastewater and solid waste **Heating, Ventilation and Air Conditioning services:** Introduction to environmental factors - Comfort and heat transfer concepts, Heat flow in buildings-Basic principles of Ventilation, Necessity and Systems of Ventilation- Basic principles of Air Conditioning – Types and Systems of ducting, Essentials of Air conditioning systems. **Miscellaneous** - Causes of Fire and Fire fighting protection- Fire detection - Planning considerations for fire protection, fire fighting installations in buildings - Acoustics-Fundamentals - Elevators and Escalators- Kinetic systems, Recent trends in Building design—Introduction to BIM, Concept of building automation – Human machine interface & intelligent systems, Building maintenance management

#### Learning Resources

- 1. National Building Code of India -2016
- 2. Development Control Rules by Chennai Metropolitan Development Agency 2006
- 3. Energy Conservation Building Code 2007
- 4. CPHEEO Manual on Sewerage and sewage treatment systems 2013
- 5. Manual for environmental clearance for large construction projects by Ministry of environment, forest and climate change.

## DISASTER ASSESSMENT AND MITIGATION MEASURES

| Category | L | Т | Ρ | Credit |
|----------|---|---|---|--------|
| GE       | 3 | 0 | 0 | 3      |

# Preamble

This course deals with the various disasters and their effects against built structures, and Hazard Assessment procedure in India. This course also deals with the methods of mitigating various hazardssuch that their risk and impact on communities is reduced.

## Prerequisite

NIL

# Course

# Outcomes

On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement   | Weightage***<br>in % |
|--------------|--|----------------------|
| CO1          | Understand the various types of manmade and natural hazards and disaster                   | 10                   |
| CO2          | apply the disaster resistant principle to the deficient buildings against natural disaster | 30                   |
| CO3          | apply the risk reduction technique involved in manmade disaster                            | 30                   |
| CO4          | Apply the vulnerability reduction technique adopted by NDRF, State and local bodies        | 10                   |
| CO5          | Apply the hazard assessment procedure to the existing buildings                            | 10                   |
| CO6          | Apply the alternative communication technique during the disaster                          | 10                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

# Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

# **Course Level Learning Objectives**

#### Course Outcome (CO1)

- 1. What is Richter Magnitude?
- 2. What is Peak ground Acceleration?
- 3. What is meant by hazard mitigation?

# Course Outcome (CO2)

- 1. List the different types of droughts and highlight its various causes.
- 2. Define community Contingency Plan
- 3. How does the site soil affect the EQ response of structures?

# Course Outcome (CO3)

- 1. Explain the plan, Mass and Geometric irregularities in the RC buildings. How these irregularities adversely affect the performance of the RC buildings during Earthquake
- 2. Discuss the various types of natural disasters and highlight the specific efforts to mitigate disasters in India

# Course Outcome (CO4)

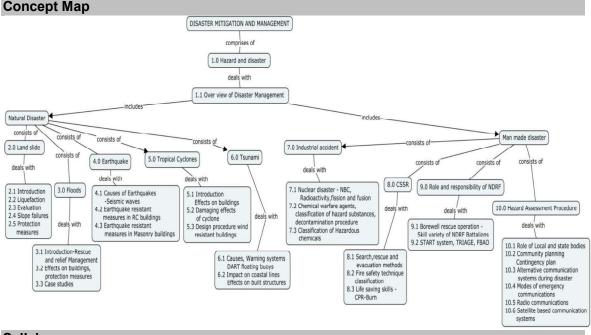

- 1. Describe various types of hazards and impacts associated with earthquakes and highlight the lessons learnt
- 2. Briefly explain the components of follow-up activities in psychological rehabilitation of disaster affected people.

## Course Outcome (CO5)

- 1. If you were the relief commissioner of the state of Assam which is affected by floods every year list out five departments that you need to contact.
- 2. Identify four different task forces and list out two responsibilities of each of the task forces
- 3. Do you think disaster risk can be reduced through community participation? Discuss

## Course Outcome (CO6)

- 1. Which areas are more prone to heat and cold waves in India? Discuss the preventive and preparedness measures that are mostly adopted for protection from heat and cold waves
- 2. Explain the role of central Government in responding to disasters
- 3. Describe suitable mitigation and preparedness measures that the community should take in advance to guard a EQ disaster occurring again.

# Syllabus

**Hazard and disaster** -Overview –Types of disasters-Phases of disaster Management -Classification of Hazards - Manmade and Natural disaster **Natural disaster- Earthquake** -Causes -Classification of Earthquakes – Magnitude and intensity - Potential deficiencies of RC and Masonry buildings -EQ resistant measures - **Landslides** -Causes – slopes failure -Preparation of zoning map -Liquefaction potential evaluation -Protection measures **Floods** – Flood zone map - Effects on buildings – protection measures from damage to buildings – Mitigation Strategies **Tropical cyclones** – stages of cyclone warning systems in India - Effects on buildings – protection measures from damage to buildings **Tsunami** - Warning systems

DART floating bouys -Tsunami impact on coastal lines -Effects of Tsunami on built structures -Mitigation Management Manmade disaster - Nuclear disaster - NBC, Radioactivity, Alpha Beta , Gamma decay, fission and fusion Chemical warfare agents, universal classification of hazard substances and explosives, decontamination procedure - BW agents - Emergency Medical responder, Vital signs (RPSPBP) Classification of Hazardous chemical chemical and industrial accidents - case histories Mitigation strategies CSSR -Collapsed Structure & **Rescue operations -** Search and rescue and evacuation methods - Life saving skills - Body mechanics - CPR Fire safety technique classification -Extinguishers- Burn and its classification Borewell rescue operation Role and responsibility of NDRF - Skill variety of NDRF Battalions-MFR-FRRM, CBRN disasters - START system, TRIAGE, FBAO (Foreign body airway Obstruction) Role of local and state bodies National level, State level, district level -Community contingency plan -Risk Management - Vulnerability mapping. Hazard Assessment -Vulnerability Assessment of Buildings procedure - Visual Inspection Detailed In - situ Investigation Planning and Interpretation of Results - Pushover Analysis Alternative communication systems during disaster- Modes of emergency communications-Satellite based communication systems -Radio communications

BASICS OF CLIMATE CHANGE

| Category | L | Т | Ρ | Credit |
|----------|---|---|---|--------|
| GE       | 3 | 0 | 0 | 3      |

## Preamble

The aims of this course is to provide basic understanding about the climate system: its attributes, underlying processes, and the drivers of climate change. The course will also provide knowledge to assess impacts of climate change on natural resources and initiatives to mitigate and adapt it.

#### Prerequisite

NIL

## Course Outcomes

# On the successful completion of the course students will be able to

| CO<br>Number | Course Outcome Statement   | Weightage***<br>in % |
|--------------|--|----------------------|
| CO1          | Understand the earth climate system and basic processes related to climate change.   | 20                   |
| CO2          | Know the global and national policies to combat the climate change impacts   | 15                   |
| CO3          | Assess the risk and vulnerability on different sectors due to climate change   | 15                   |
| CO4          | Choose relevant technological option for mitigating climate change and adaptive techniques to build the climate resilience society | 15                   |
| CO5          | Assess the Climate related Issues in different engineering disciplines.  | 20                   |
| CO6          | Gain awareness about the stress on natural based resources and to conserve it fromnatural calamities                               | 15                   |

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

| Origination             | -   |

#### Sample Questions for Course Outcome Assessment\*\*

\*\* (2 to 3 at the cognitive level of course outcome)

#### Course Outcome1(CO1):

- 1. Summarize your views on climate change and explore the answers for unanswered questions behind it.
- 2. Draw the atmospheric profile of temperature
- 3. List the Green House gases.

#### CourseOutcome2 (CO2):

- 1. Critically analyze the roles and responsibilities of various agencies towards fighting Global Warming and Climate change.
- 2. Write the salient features of Kyoto protocol

#### CourseOutcome3 (CO3):

- 1. Explain the current Vulnerabilities in water Resources sector.
- 2. Analyze the Vulnerability of Forestry sector and explore the different Adaptation and mitigation options with respect to Climate Change.

#### Course Outcome 4 (CO4):

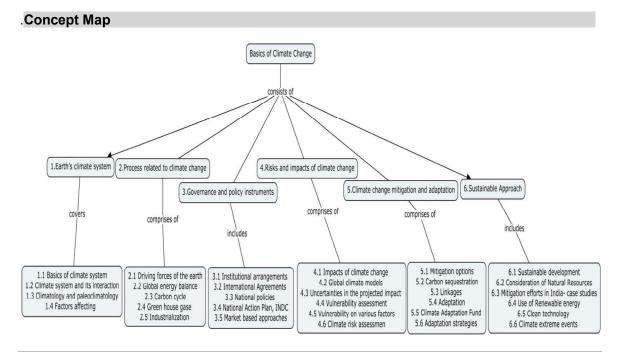

- 1. Write funding status of Indian Government on climate change mitigation and adaptation.
- 2. What is the difference between mitigation and adaptation

#### Course Outcome 5 (CO5):

- 1. Discuss the uncertainties in the projected impact of climate change.
- 2. How climate change affects human health in dry and arid region?

#### CourseOutcome6 (CO6):

- 1. The consumption of fuel in India is increasing everyday and cost of it too. Propose a suitable alternate fuel for the future after analyzing the pros and cons of its implementation
- 2. Discuss the interaction between Climate change and Sustainable Development

### Syllabus

**Earth's climate system** Basics of climate system and its interaction, paleoclimatologymeasurement techniques, Factors affecting global, regional and local climates **Process related to climate change** driving forces of the earth, Global energy balance, Carbon cycle, Green house gases, Industrialization and Urbanization. **Risks and impacts of climate change** Impacts of climate change on various sectors, climate models and scenarios, Vulnerability assessment on various sector, Climate risk assessment. **Climate change mitigation and adaptation** Long term and short term mitigation, Linkages between mitigation and adaptation, Adaptation strategies in various sectors. **Governance and policy instruments** National Action Plan on Climate Change, Market based approaches, International Agreements and protocols. **Sustainable Approach** Climate change and sustainable development, Future use of Renewable energy, clean technology and Alternate energy, climate extreme events and natural based solutions for conservation

#### Learning Resources

| Origination             | -   |

#### Sample Questions for Course Outcome Assessment

#### Course Outcome1(CO1):

- 1. Recall the Objectives of Road Safety
- 2. Match Road safety with Sustainable Development Goals
- 3. Apply the concept of collision and condition diagram for the accident spot

#### Course Outcome 2(CO2):

- 1. Prepare a report of government and NGO's role in road safety.
- 2. Discuss in detail about traffic laws in India.
- 3. Summarize National road safety policy.

#### Course Outcome3(CO3):

- 1. Discuss the road markings required to enhance road safety.
- 2. Assume a city has congested traffic patterns. Illustrate traffic signs for that city.
- 3. Review about Traffic signal diagram, types and Signal Coordination

## Course Outcome 4 (CO4):

- 1. Demonstrate the concept of Transportation System Management for commercial area.
- 2. Explain about Intelligent transport system (ITS) in detail.

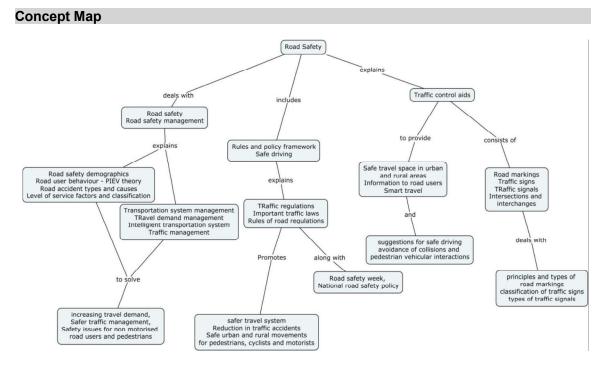

3. When the prohibition of left turning is applicable?

## Course Outcome 5 (CO5):

- 1. Adapt road safety audit methodology for a road network to identify black spots.
- 2. Show the safety rating system for the given road stretch.
- 3. Compare road safety audit and road safety rating system.

## Course Outcome 6(CO6):

- 1. Illustrate the tips and suggestions for safe driving at urban and rural locations.
- 2. Why accident rate is high in driving at night times?
- 3. Mention the precautions to be taken in long journey.

## Syllabus

Introduction to Road Safety-Definition, Objectives, Road safety demographics, Road User behaviour-PIEV TheoryRoad Accident-Types, Causes, Data collection, Collision & Condition diagram, Preventative measures, Level of service-factors, Classification. Rules and policy framework-Traffic regulations – basic principles, Roles of Government and NGO's, Important traffic laws and penalties-Motor Vehicle Act - 1988, Pedestrian law, Rules of Road Regulations - 1989, National Road Safety Policy, Parking regulations, Road safety week-Objectives, initiatives, International Best Practices. Traffic control Aids-Road markings- Functions, types, general principles, Traffic signs- Objective, classification, Traffic signals-Vehicle & Pedestrian signal, Important terms, types, concept of signal coordination, Intersection & Interchange-Forms, Classification. Road Safety Management Techniques-Transportation System Management-Purpose, Travel Demand Management-methods,Traffic Management-methods, Intelligent Transportation system, Case studies. Road Safety Audit and rating system-Road Safety Audit-Principles, Procedure, checklists, issues and counter measures, Road safety rating systemconcept, process, measures, Case studies. Tips and suggestions for safe driving-Safety in urban and rural locations and intersections, safety in long journey, driving in night times, hill roads and tunnels.Regulatory measures for cyclists, motor cycle and scooter riders.Safety measures for pedestrians, Disabled, aged users, Safety at road works in progress

Preamble

The Constitution of India is the sovereign law of the land. It promises justice, liberty and equality to the people of India. For this, the Constitution carries the basic notion of rule of law i.e. limited government, and provides the structure, procedures, powers, and duties of government institutions, and sets out fundamental rights, directive principles, and the duties of citizens. The aims of this course is to provide basic understanding about Constitution. **Prerequisite** 

#### NIL

#### Course Outcomes

| CO     | Course Outcome Statement  | Weightage*** |
|--------|---|--------------|
| Number |   | in %         |
| CO1    | Understand the salient features of Indian Constitution.   | 20           |
| CO2    | Explain the Fundamental Rights and duties incorporated in the Indian Constitution.              | 40           |
| CO3    | Discuss the specific provisions mentioned in the Indian constitution to ensure the rule of Law. | 40           |

On the successful completion of the course students will be able to

\*\*\* Weightage depends on Bloom's Level, number of contact hours,

#### Course Outcome1(CO1):

- 1.Discuss the key features of Indian constitution
- 2. Explain the Relationship between Directive Principles and Fundamental Rights

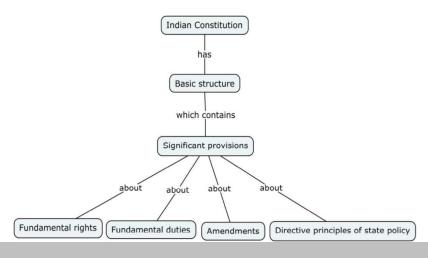

#### CourseOutcome2 (CO2):

- 1.Rewrite the article 21.
- 2.List the articles on constitutional remedies.

#### CourseOutcome3 (CO3):

- 1. Explain the emergency provisions mentioned in the Constitution.
- 2. Illustrate the Structure of Indian Judiciary system .

### **Concept Map**

## Syllabus

Constitution of India-Historical perspective, Salient features and characteristics, The Directive Principles of State Policy, Fundamental Duties &Fundamental Rights - Rights to Equality, Cultural and educational rights, Right to Life and Personal Liberty, Right to Constitutional remedies, Rights against exploitation, Right to Constitutional remedies, Right to property, Parliament and state legislature-Legislative relations between Union and state, Emergency Provisions, Structure of Indian Judiciary-Indian legal framework, Amendment of the Constitutional Powers, Public interest litigation. Access to Justice and Legal Aid in India. - Case Laws.
