Faculty of EEE  
Exchange student (2018-2019)

## Testimonial on my Internship

I am a student of TCE ,EEE dept (2015-19 batch)and did my internship at NTU during my 8th semester.I worked in the field of DIGITAL PROCESSING and MACHINE LEARNING under Dr.Lei Lei and Dr.Siraj at Temasek labs,NTU and with guidance from Dr.Baskar at TCE .

I had a unique experience on learning and on performing a research(My role: Junior Research Scientist).NTU had a dynamic environment with many innovations in every possible science field and it is also equipped with high-end laboratories which enabled me to work in a deeper sense in my field,as an undergraduate student.

The learning method is self-study with libraries and 24hours open labs because reaching the guide or professor is highly tough for small doubts ,possibility by an email.This is my unique experience on learning which demands a do or die position in learning any subject by my own self.The work culture was different for me with weekly round table meet and monthly board meets,where I was respected as a scientist,demanding presentation alike senior officials.

As a student of NTU, I also had a chance to participate in various lectures given by other professors and professionals which gave a broader view on my field and also in other fields.Apart from work , I enjoyed interacting with students from different parts of the world.Had an opportunity to participate in their cultural and technical events.

Internship at NTU gave me a rich knowledge in my subject and paved the way for my future study and career.

Thank you.
