  - **No. of persons working in TCE-TBI**: 4
  - **Nature of Job**: Furnify enables the customer to build customized furniture by taking their choices and allowing them to select the model, size, configurations, materials, color and also helps them dynamically see the prices for them. Furnify breaks the one-size-fits-all approach and exclusively manufacturers the products only against the confirmation of orders. The customer can design their own furniture's online, visualize it in their homes and make dynamic decisions based on how their designed product complements their home, thereby reducing any uncertainty of their order. Furnify cuts down the cost by cutting out the middlemen and connecting the manufacturers and customers together. They want to help the customers move from a mass produced furniture world into the countless possibilities of bespoke furniture. They empower the customers to design and build their own furniture's.

- ❖ **MAVEL TECHNOLOGIES PVT LTD:** **(Registration Number: U72900TZ2018PTC030483)**

- **Managing Director**: Murali Kumar S K
- **Company Office**: Thiagarajar College of Engineering- Technology Business Incubator Madurai – 625015
- **Contact Number**: +91 9442266711
- **No. of persons working in TCE-TBI**: 4
- **Nature of Job**: Development of business application software products for food processing industry. These products cater to the business operations of a food processing industry starting from raw material receipt to the shipment of the products in a manufacturing factory. Apart from focusing the production process, the product also supports the handling of other business functions like Sales, Purchase, Inventory management, Maintenance, Shipping, Human Resources, Legal, , Accounts and Finance etc.

  The nature of job involves requirements collection from customers, designing the product as per the requirements, developing code as per the architecture and design, performing unit tests, integration tests and system tests of the product before release to the customer. The software product goes through a rigorous validation at every stage so that the product integrity is maintained. The product development requires a high level of computer skills in the area of architecture and design, coding, testing and networking. The product tries to apply latest process and technologies during development so that a high quality of product is delivered. The product also extends its features into providing an ecommerce solution to the industry. This ecommerce product focuses only on food processing industry. The product should be capable of handling the backend logistics activities involved in delivering the food product to the end customer. This requires a complex integration with the business process application, ecommerce platform, logistics, payment gateway etc.
